Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q65-Q70):

NEW QUESTION # 65

What information is included in the Portworx diagnostics bundle (diags)?

- A. Portworx journal logs, CLI command outputs, and basic OS information
- B. Application logs, Kubernetes events, and network configurations
- C. User activity logs, security policies, and firewall rules

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Portworx diagnostics bundle, known as "diags," aggregates comprehensive diagnostic data for troubleshooting. This includes Portworx journal logs, which record detailed system and service events essential for identifying errors or malfunctions. Additionally, the bundle contains outputs from key CLI commands such as pxctl status and pxctl volume list that provide snapshots of the cluster's health, volume states, and configuration at the time of collection. Basic operating system information, including kernel version, disk hardware details, and network interfaces, is also captured to understand the underlying environment. Together, these components equip Portworx support and administrators with the contextual data needed for effective root cause analysis and faster issue resolution. The official Portworx support documentation recommends collecting and submitting this bundle for all significant troubleshooting cases as it expedites problem diagnosis and resolution [\[Pure Storage Portworx Support Guide source\]](#).

NEW QUESTION # 66

What command allows a Portworx admin to create a cloud credential for the Object Store?

- A. pxctl service credentials create
- B. pxctl credentials generate
- C. **pxctl credentials create**

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Portworx, managing credentials for cloud object stores is vital to enable features like cloud snapshots and backups. The command pxctl credentials create is used to create and register cloud credentials with the Portworx cluster. This command allows administrators to specify provider details such as AWS, Google Cloud, or Azure, and input necessary access keys, secret keys, regions, and endpoints. Proper credential configuration enables Portworx to authenticate with external object stores securely, ensuring reliable data movement and disaster recovery operations. The CLI facilitates easy credential management, including listing, updating, and deleting credentials as needed. Official Portworx documentation highlights pxctl credentials create as the authoritative command for establishing cloud storage access, ensuring security best practices by managing credentials centrally within the Portworx control plane [\[Pure Storage Portworx CLI Guide source\]](#).

NEW QUESTION # 67

What Portworx swap requirement exists on a Portworx-enabled Linux host?

- A. Swap should be enabled.
- B. Portworx does not have a requirement for swap to be enabled or disabled.
- C. Swap should be disabled.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx requires swap to be disabled on Linux hosts where it runs. Disabling swap is necessary because swap usage can cause unpredictable latency and performance degradation for storage operations. Portworx relies on consistent and predictable I/O performance for managing block devices and volumes, which is incompatible with the potential delays caused by swapping memory pages to disk. Additionally, many Kubernetes environments recommend disabling swap to meet Kubernetes scheduler requirements, aligning with Portworx's needs. Portworx installation and system requirements documentation explicitly state that swap should be disabled on nodes running Portworx to ensure cluster stability, optimal performance, and predictable behavior of storage operations [【Pure Storage Portworx System Requirements source】](#).

NEW QUESTION # 68

What label can be used to migrate Network Policies with Asynchronous DR?

- A. `skipNetworkPolicyCheck: true`
- B. `skipNetworkPolicyCheck: false`
- C. By default Network policies are migrated

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When using Portworx Asynchronous Disaster Recovery (DR) to migrate workloads and storage across clusters, network policies can sometimes interfere with seamless failover. The label `skipNetworkPolicyCheck: true` can be used to instruct the DR mechanism to bypass strict network policy checks during migration. This allows applications and volumes to migrate even if network policies differ or are incompatible between source and destination clusters. Without this label, migration might be blocked or fail due to network restrictions. By default, network policies are not always migrated, and strict checks are performed unless explicitly skipped. Portworx DR documentation details this option as a means to increase migration flexibility, reduce operational friction, and enable faster recovery during disaster scenarios while administrators work on aligning network configurations [【Pure Storage Portworx DR Guide source】](#).

NEW QUESTION # 69

Which command should an administrator run to initiate the license expansion for a blue-green upgrade in a Portworx cluster?

- A. `pxctl cluster expand --start`
- B. `pxctl license expand --start`
- C. `pxctl node expand --start`

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

During blue-green upgrades or license expansions in Portworx clusters, administrators use the command `pxctl license expand --start` to initiate the license expansion process. This command signals Portworx to begin applying the new license, enabling additional nodes or features as permitted. The process is carefully managed to avoid disruption during the upgrade and ensure that new license entitlements are recognized. The Portworx upgrade and licensing documentation specify this command as the official method for license expansion, ensuring compliance and seamless cluster scaling during complex upgrade workflows [【Pure Storage Portworx License Management Guide source】](#).
