

Interactive ACD201 Practice Exam, ACD201 Actual Exam

P.S. Free 2026 Appian ACD201 dumps are available on Google Drive shared by Fast2test: https://drive.google.com/open?id=1vkftsv1F0q5guYF_KFiSHgBvwu&cdL9m

Yes, as a lot of our loyal customers who have passed the ACD201 exam and got the certification said that more than the ACD201 certification, they felt they had been benefited more for they had obtained the knowledge and apply it in the daily work, which can help them finish all tasks efficiently. Then they do not need to work overtime. It is necessary to learn our ACD201 Guide materials if you want to own a bright career development.

Appian ACD201 Exam Overview:

Certification Vendor:	Appian
Exam Name:	Appian Senior Developer
Exam Number:	ACD201
Exam Duration:	60 - 75
Certificate Validity Period:	2 years
Real Exam Qty:	45 - 50
Exam Price:	\$200 USD
Related Certifications:	Appian Certified Associate Developer
Exam Format:	Multiple Choice, Multiple Response, Scenario-based Questions
Passing Score:	60%
Available Languages:	English
Recommended Training:	Appian Official Training Courses
Exam Registration:	Appian Certification Registration
Sample Questions:	Appian ACD201 Sample Questions
Exam Way:	Online proctored exam
Pre Condition:	Recommended: Hold Appian Certified Associate Developer certification; 6+ months of hands-on Appian development experience

ACD201 practice exam will provide you with wholehearted service throughout your entire learning process. This means that unlike other products, the end of your payment means the end of the entire transaction our ACD201 learning materials will provide you with perfect services until you have successfully passed the ACD201 Exam. And if you have any questions, just feel free to us and we will give you advice on ACD201 study guide as soon as possible.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 2	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 3	• Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 4	• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

Appian Senior Developer Sample Questions (Q22-Q27):**NEW QUESTION # 22**

You're redesigning user interfaces to achieve more efficient space usage.

Which layout component is the best choice for displaying an interface with a vertical meaningful order of components?

- A. `a!sideBySideLayout()`
- B. `a!cardLayout()`
- C. `a!columnsLayout()`

Answer: C

Explanation:

`a!columnsLayout()` is best for organizing and displaying components in a vertical order with efficient space usage, as it supports arranging items in structured, responsive columns.

NEW QUESTION # 23

The synced record Task has a self-referential relationship defined in the column `parentTaskId`. There is a many-to-one record relationship between the `id` and `parentTaskId` called `parentTask`.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Create a sync-time custom record field on the Task record called `parentName`. Specify this field to return in the query field

selection.

- B. Use `a!queryRecordType()` filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.
- C. Use `a!queryRecordType()` with a filter on the task id, with fields specified to return `recordType!Task.name` and `recordType!Task.parentTask.name`.

Answer: C

Explanation:

Using `a!queryRecordType()` with a filter on the task ID and specifying both `recordType!Task.name` and `recordType!Task.parentTask.name` in the fields will efficiently return both the task name and its parent task name in a single query.

NEW QUESTION # 24

You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.

Which design pattern is most appropriate in this case?

- A. Configure `a!columnChartField()` using `a!columnChartConfig()` with the case creation date as the `primaryGrouping` and the region as the `secondaryGrouping`.
- B. Use `a!queryRecordType()` with `a!aggregationFields()` to group the case creation date by region into a local variable. Pass the local variable value into the data input of `a!columnChartField()`.
- C. Configure `a!pieChartField()` using `a!pieChartConfig()` with the case creation date as the `primaryGrouping` and the region as the `secondaryGrouping`.

Answer: B

Explanation:

Using `a!queryRecordType()` with `a!aggregationFields()` to group by case creation date and region, storing the result in a local variable and passing it to the data input of `a!columnChartField()` ensures efficient aggregation and flexible chart display for your report.

NEW QUESTION # 25

You run a report on different employee transactions by using a View.

You encounter the following error: "a!queryEntity: An error occurred while retrieving the data." What is the most likely root cause of this error?

- A. The view doesn't have a column mapped as a primary key in its corresponding CDT.
- B. The rule contains a missing syntax.
- C. The view contains a large number of rows, requiring more time to fetch the data.

Answer: A

Explanation:

The most likely root cause is that the view doesn't have a column mapped as a primary key in its corresponding CDT. Appian requires a primary key mapping for querying views to ensure data integrity and identification.

NEW QUESTION # 26

You're refining a story for a centralized distribution center that extends the current application by allowing inventory managers to review orders.

These orders are created through a record action that various workshops access from a shared Appian site.

Which consideration best suits this use case?

- A. How will you handle errors resulting from a failed integration as a result of the workshops using an external system to place orders?
- B. What components have already been built relating to this piece of functionality so that you can reuse them and speed up development?
- C. What are the personas that will be utilizing this application so that an Appian group structure can be developed and maintained?

Answer: B

Explanation:

Identifying the personas (such as inventory managers and workshop users) ensures you can design and maintain an appropriate Appian group structure for managing access and permissions, which is critical for a centralized application accessed by multiple roles.

NEW QUESTION # 27
