Oracle Cloud Infrastructure 2025 Migration Architect Professional Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which is NOT a valid connectivity model in Oracle Cloud Infrastructure (OCI) FastConnect?

- A. FastConnect: Colocation with Oracle
- B. FastConnect: With a Third-Party Provider
- C. FastConnect: Direct-to-Cloud**
- D. FastConnect: With an Oracle Partner

Answer: C

Explanation:

FastConnect: Direct-to-Cloud is not a valid connectivity model in Oracle Cloud Infrastructure (OCI) FastConnect. This option does not align with the available methods for establishing connectivity through FastConnect.

NEW QUESTION # 42

What key benefit does Full Stack Disaster Recovery (FSDR) offer in Oracle Cloud Infrastructure (OCI)?

- A. Simplified management of VM backups and restores
- B. Accelerated deployment of VM configurations in OCI
- **C. Seamless migration of VM workloads between OCI regions**
- D. Improved monitoring and performance optimization for VMs in OCI

Answer: C

Explanation:

Full Stack Disaster Recovery (FSDR) offers the key benefit of seamless migration of VM workloads between OCI regions.

NEW QUESTION # 43

As an application developer deploying containerized applications, in which scenario would you most likely choose Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE) over Oracle Cloud Infrastructure Registry (OCIR)?

- A. When there is a need for a platform with serverless capabilities to efficiently run containerized workloads
- B. When there is a need to store, share, and manage container images with a highly available and scalable architecture
- **C. When there is a need for a managed container orchestration service for automatic scaling, upgrades, and security patching**
- D. When a private container registry is required for internal use, and the need to store, share, and manage container images is prioritized

Answer: C

Explanation:

Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE) is a managed container orchestration service that provides automatic scaling, upgrades, and security patching for containerized applications. It is ideal for scenarios where there is a need for a fully managed Kubernetes environment to deploy and manage containerized workloads.

NEW QUESTION # 44

You are a migration architect responsible for migrating 100 TB of on-premises data to Oracle Cloud Infrastructure (OCI). Because of limited bandwidth and security concerns, transferring the data over the public Internet is not feasible. Which OCI service would you recommend to efficiently transfer the large volume of on-premises data to OCI while ensuring data security?

- A. Snowball
- B. Data Integration
- **C. Data Transfer Service**
- D. Storage Gateway

Answer: C

Explanation:

Data Transfer Service in OCI is specifically designed for efficiently transferring large volumes of data to OCI while ensuring data security. It provides high-speed data transfer over dedicated network connections, making it the ideal choice for migrating 100 TB of on-premises data to OCI.

NEW QUESTION # 45

How does containerization differ from virtualization in terms of resource optimization?

- A. Virtualization maximizes efficiency by running multiple applications on the same OS kernel
- B. Virtualization offers more flexibility in terms of application dependencies
- C. Containers require a full operating system to run, whereas virtual machines share a single operating system
- **D. Containerization allows for more efficient utilization of hardware resources by sharing the host operating system**

Answer: D

Explanation:

Containerization allows for more efficient utilization of hardware resources by sharing the host operating system. Containers only

package the application and its dependencies, running on top of the host OS without the need for a separate guest OS.
