## Get Splunk SPLK-4001 Dumps For Quick Preparation [2026]

Our SPLK-4001 exam questions are supposed to help you pass the exam smoothly. Don't worry about channels to the best SPLK-

4001 study materials so many exam candidates admire our generosity of offering help for them. Up to now, no one has ever challenged our leading position of this area. The existence of our SPLK-4001 learning guide is regarded as in favor of your efficiency of passing the exam. And the pass rate of our SPLK-4001 training braindumps is high as 98% to 100%.

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q34-Q39):

### NEW QUESTION # 34

What is the limit on the number of properties that an MTS can have?

- A. 0
- B. 1
- **C. 2**
- D. No limit

**Answer: C**

Explanation:

The correct answer is A. 64.

According to the web search results, the limit on the number of properties that an MTS can have is 64. A property is a key-value pair that you can assign to a dimension of an existing MTS to add more context to the metrics. For example, you can add the property use: QA to the host dimension of your metrics to indicate that the host is used for QA1 Properties are different from dimensions, which are key-value pairs that are sent along with the metrics at the time of ingest. Dimensions, along with the metric name, uniquely identify an MTS. The limit on the number of dimensions per MTS is 362 To learn more about how to use properties and dimensions in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html#Custom-properties> 2:

<https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html>

### NEW QUESTION # 35

How is it possible to create a dashboard group that no one else can edit?

- A. Link the dashboard group to the team
- B. Hide the edit menu on the dashboard group.
- C. Ask the admin to lock the dashboard group.
- **D. Restrict the write access on the dashboard group.**

**Answer: D**

Explanation:

Explanation

According to the web search results, dashboard groups are a feature of Splunk Observability Cloud that allows you to organize and share dashboards with other users in your organization<sup>1</sup>. You can set permissions for each dashboard group, such as who can view, edit, or manage the dashboards in the group<sup>1</sup>. To create a dashboard group that no one else can edit, you need to do the following steps:

Create a dashboard group as usual, by selecting Dashboard Group from the Create menu on the navigation bar, entering a name and description, and adding dashboards to the group<sup>1</sup>.

Select Alert settings from the Dashboard actions menu () on the top right corner of the dashboard group. This will open a dialog box where you can configure the permissions for the dashboard group<sup>1</sup>.

Under Write access, select Only me. This will restrict the write access to the dashboard group to yourself only. No one else will be able to edit or delete the dashboards in the group<sup>1</sup>.

Click Save. This will create a dashboard group that no one else can edit.

### NEW QUESTION # 36

What is the limit on the number of properties that an MTS can have?

- A. 0
- B. 1
- **C. 2**
- D. No limit

**Answer: C**

Explanation:

Explanation

The correct answer is A. 64.

According to the web search results, the limit on the number of properties that an MTS can have is 64. A property is a key-value pair that you can assign to a dimension of an existing MTS to add more context to the metrics. For example, you can add the property use: QA to the host dimension of your metrics to indicate that the host is used for QA1 Properties are different from dimensions, which are key-value pairs that are sent along with the metrics at the time of ingest. Dimensions, along with the metric name, uniquely identify an MTS. The limit on the number of dimensions per MTS is 362 To learn more about how to use properties and dimensions in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

2: <https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html>

### NEW QUESTION # 37

A customer deals with a holiday rush of traffic during November each year, but does not want to be flooded with alerts when this happens. The increase in traffic is expected and consistent each year. Which detector condition should be used when creating a detector for this data?

- A. Outlier Detection
- B. Calendar Window
- C. Static Threshold
- **D. Historical Anomaly**

**Answer: D**

Explanation:

Explanation

historical anomaly is a detector condition that allows you to trigger an alert when a signal deviates from its historical pattern<sup>1</sup>.

Historical anomaly uses machine learning to learn the normal behavior of a signal based on its past data, and then compares the current value of the signal with the expected value based on the learned pattern<sup>1</sup>. You can use historical anomaly to detect unusual changes in a signal that are not explained by seasonality, trends, or cycles<sup>1</sup>.

Historical anomaly is suitable for creating a detector for the customer's data, because it can account for the expected and consistent increase in traffic during November each year. Historical anomaly can learn that the traffic pattern has a seasonal component that peaks in November, and then adjust the expected value of the traffic accordingly<sup>1</sup>. This way, historical anomaly can avoid triggering alerts when the traffic increases in November, as this is not an anomaly, but rather a normal variation. However, historical anomaly can still trigger alerts when the traffic deviates from the historical pattern in other ways, such as if it drops significantly or spikes unexpectedly<sup>1</sup>.

### NEW QUESTION # 38

To refine a search for a metric a customer types host: test-\*. What does this filter return?

- A. Every metric except those with a dimension of host and a value equal to test.
- B. Error
- **C. Only metrics with a dimension of host and a value beginning with test-.**
- D. Only metrics with a value of test- beginning with host.

**Answer: C**

Explanation:

Explanation

The correct answer is A. Only metrics with a dimension of host and a value beginning with test-.

This filter returns the metrics that have a host dimension that matches the pattern test-. For example, test-01, test-abc, test-xyz, etc. The asterisk (\*) is a wildcard character that can match any string of characters<sup>1</sup> To learn more about how to filter metrics in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:
