Quick and Reliable Exam Prep with SAP C_ACDET_2506 PDF Dumps

If you want to pass an exam just one time, then choose. Our C_ACDET_2506 exam dumps will provide you such chance like this. C_ACDET_2506 exam braindumps are verified by experienced experts in the field, and they are quite familiar with the questions and answers of the exam center, therefore the quality of the C_ACDET_2506 Exam Dumps are guaranteed. Besides we offer free update for 365 days after purchasing.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q22-Q27):

NEW QUESTION # 22
You have a custom string field with a list of values. The values are represented as an Enumeration.
Which of the following applies to this scenario?

- A. The display order in the droop down matches the order defined in the enumeration file
- B. The display order of the values is alphabetical
- C. In the enumeration file, the Value column must only contain whole numbers
- D. The user can filter the values using the search box in the chooser

Answer: A,D

NEW QUESTION # 23
During which SAP Activate Methodology phase do you define the customer requirements?

- A. Explore
- B. Define
- C. Design
- D. Discover

Answer: A

Explanation:
SAP Activate'sExplore phaseis focused on refining and validating customer requirements through fit-to- standard workshops. During this phase, project teams analyze SAP best practice processes alongside customer business needs, identifying configuration gaps and defining functional requirements.
Design as a distinct phase has been replaced by the more agile Explore phase, focusing on solution validation.
The Discover phase focuses on solution evaluation and strategy alignment, not detailed requirements gathering. The term "Define" is not part of SAP Activate methodology.
Proper requirements definition during Explore ensures that the configurations built in Realize align with business needs, reducing rework and enhancing solution adoption. This methodology reflects SAP's emphasis on agile and iterative project delivery within cloud and hybrid deployments.

NEW QUESTION # 24

Which of the following can be used to define relation types and establish a custom relationship? (Select 2 correct answers)

- A. A custom Flex Master Data Template such as vrealm_1936.fmd_58984.Hospital
- B. A custom Form Template such as vrealm_1936.formDoc_18697.LessonsLearned
- C. A custom Enumeration such as Contracts_Contract_Type
- D. A standard class such as ariba.basic.core.CommodityCode

Answer: A,D

Explanation:

In SAP Ariba, relation types can be defined using custom Flex Master Data (FMD) templates and standard classes such as ariba.basic.core.CommodityCode. These define valid relationships between fields, allowing dependent picklists or filtering logic in forms. Custom enumerations are static lists and are not used to establish dynamic relations, and custom form templates are for form layouts and do not define data relationships.

NEW QUESTION # 25

Which scenarios are applicable when moving templates from the test site to the production site by Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. Batch imports are available for templates when migrating configuration bundles.
- B. Published templates with flex master data references in the test site are migrated to the production site during the first migration attempt.
- C. New templates that successfully migrated to the production site are in Draft state.
- D. Draft templates on the source site are skipped.

Answer: C,D

Explanation:

ICM only migrates published templates; draft templates are skipped (A). When templates are imported into production, they arrive in draft state by default to allow review and publishing before use (C). Batch imports for templates (B) are not supported; migration is typically handled per template. Flex master data references require manual migration steps and are not migrated automatically during the initial template transfer (D).

NEW QUESTION # 26

A customer requests a dynamic list from CSV. Which field type supports that?

- A. Single-Select Enum
- B. Hyperlink
- C. Flex Master Data-based field
- D. Computed Field

Answer: C

Explanation:

The Flex Master Data (FMD)-based field type supports dynamic lists sourced from CSV uploads. FMD fields act like advanced picklists that can contain thousands of values, imported via CSV templates defining the master data structure and entries. These fields are searchable, scalable, and ideal for large or frequently changing datasets.
Single-select enumerations are static lists manually defined and cannot import large CSV datasets. Computed fields calculate values dynamically based on expressions and are not designed for listing selectable values.
Hyperlink fields store URLs, unrelated to selection lists.
FMD fields are the preferred approach when a customer requires large or frequently updated lookup lists in sourcing projects or contracts.

NEW QUESTION # 27
