The names of these formats are Category-7A-General-and-Household-Pest-Control PDF dumps file, desktop practice test software, and web-based practice test software.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

Carpenter ants:

- A. Discard the wood from their galleries
- B. Feed on the chewed wood from their cavities
- C. Make transportation tubes from the chewed wood

Answer: A

Explanation:

Carpenter ants excavate wood to create galleries for nesting but do not feed on it; they discard the wood as sawdust-like frass outside their galleries. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Ants) notes that this frass is a key sign of carpenter ant activity. Option A (feed on the wood) is incorrect, as they feed on insects and sugary substances.

Option B (make transportation tubes) applies to termites, not carpenter ants.

NEW QUESTION # 71

Which of the following application instructions related to indoor use is correct?

- A. Apply as a broadcast treatment to floors or floor coverings
- B. Use a high-pressure system for a spray application
- C. Do not spray bed linens or other materials that come in direct contact with people

Answer: C

Explanation:

The TEMPRID SC label explicitly states that applicators should not spray bed linens or other materials that come in direct contact with people, such as mattresses, pillows, or clothing, to prevent human exposure to the pesticide. This is a critical safety instruction for indoor use in Category 7A applications.

Option A (broadcast treatment to floors) is incorrect, as TEMPRID is typically applied as a spot or crack-and-crevice treatment indoors, not a broadcast application, unless specified. Option C (high-pressure system) is incorrect, as high-pressure systems can disperse pests like bedbugs and are not recommended for indoor use; low-pressure, targeted applications are preferred.

NEW QUESTION # 72

For pesticide applications performed on school property, the commercial pesticide applicator is:

- A. Required to notify students, faculty, and staff as schools are not required to notify students, faculty, and staff
- B. Required to notify the School IPM Coordinator as well as the students, faculty, and staff
- C. Required to provide pesticide application information to the School IPM Coordinator if requested but not conduct the notification

Answer: B

Explanation:

Under the New Jersey School IPM Act (N.J.A.C. 7:30-13), commercial pesticide applicators must notify the School IPM

Coordinator and students, faculty, and staff of pesticide applications on school property. This includes advance notice (at least 72 hours prior) and posting signs at the application site.

The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 4: IPM in Schools) aligns with these requirements. Option A is incorrect because schools are also required to notify, but the applicator has a direct responsibility. Option C is incorrect, as notification is mandatory, not optional.

NEW QUESTION # 73

Swarming ants and termites are similar, but the termite:

- A. Does not have a waist
- B. Has bent antennae
- C. Has a narrow waist

Answer: A

Explanation:

Swarming termites and ants can be distinguished by physical characteristics. Termites do not have a waist, as their body is broad and straight, while ants have a narrow, pinched waist. Additionally, termites have straight antennae, whereas ants have bent (elbowed) antennae. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Termites vs. Ants) highlights these differences. Option A (bent antennae) applies to ants, not termites. Option C (narrow waist) also describes ants, not termites.

NEW QUESTION # 74

___ flies are easily recognized by their metallic green or blue color.

- A. Bottle or blow
- B. House
- C. Cluster

Answer: A

Explanation:

Bottle or blow flies are known for their metallic green or blue color, which distinguishes them from other flies. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter

7: Flies) describes these flies as common in structures, often attracted to decaying organic matter.

Option A (cluster flies) are dull grayish-brown and often found in attics. Option B (house flies) are gray with black stripes, not metallic.

NEW QUESTION # 75

.....

We provide free PDF demo of our Category-7A-General-and-Household-Pest-Control practice questions download before purchasing our complete version. After purchasing we provide one year free updates and one year customer service on our Category-7A-General-and-Household-Pest-Control learning materials.
