Talend-Core-Developer Knowledge Points & Latest Talend-Core-Developer Test Labs

They all got benefits from Talend-Core-Developer certification and now they are Talend-Core-Developer certification holders. You can also become part of this skilled and qualified community. To do this you just need to pass the Talend Talend-Core-Developer certification exam. Are you ready for this? Do you want to become a Talend Core Certified Developer Exam certified? If your answer is positive then we assure you that you are at the right place. Register yourself for Talend Core Certified Developer Exam

(Talend-Core-Developer) certification exam and download the Test4Engine Talend-Core-Developer exam practice questions and start preparation right now.

Talend Core Certified Developer Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20
You want to create a generic schema using a schema defined in a Talend component in the Repository view.
How can you accomplish this?

- A. On the Advanced settings tab of the Component view.
- B. In the Repository, by right-clicking Generic schemas.
- C. By right-clicking the component and selecting the Generic schema option.
- D. In the Schema Editor window for the component.

Answer: B

Explanation:
To create a generic schema from a schema defined in a Talend component, follow these steps:
* Open the Repository View:
* In Talend Studio, navigate to the Repository panel, typically located on the left side of the interface.
* Locate the 'Generic schemas' Node:
* Within the Repository, expand the 'Metadata' section to find the 'Generic schemas' node.
* Initiate the Generic Schema Creation Process:
* Right-click on 'Generic schemas' and select 'Create generic schema' from the context menu.
* Define the Schema Properties:
* In the schema creation wizard that appears, provide the necessary properties such as 'Name' and
'Description' for the new generic schema.
* Set Up the Schema Structure:
* Define the schema structure by adding columns and specifying their data types as required.
* Finalize the Schema Creation:
* Click 'Finish' to complete the creation process. The new generic schema will now be available under the 'Generic schemas' node in
the Repository.
This method allows you to create a reusable generic schema that can be applied across multiple components and Jobs within Talend Studio.

NEW QUESTION # 21
You need to set up a server in your Talend environment that enables several members of your team to collaborate on a project.
Which application must you enable before working on a remote project?

- A. Git or SVN client must be installed on each developed workstation.
- B. Talend admission Center service must be running on each development workstation.
- C. Git or SVN server instance must be running.
- D. Talent Administration Center instance must be running with the team members and project configured.

Answer: C,D

Explanation:
To set up a server in your Talend environment that enables several members of your team to collaborate on a project, you need to enable two applications before working on a remote project: Git or SVN server instance and Talend Administration Center instance. These applications are used to manage version control and collaboration for your project.
Git or SVN server instance is a server application that allows you to store and track changes of your project files using a version control system. Git and SVN are two popular version control systems that are supported by Talend Studio. You need to have a Git or SVN server instance running and accessible by your team members before working on a remote project. You also need to have a Git or SVN client installed on each development workstation to connect to the server and perform version control operations.
Talend Administration Center is a web-based application that allows you to manage users, projects, tasks, execution servers, and licenses for your Talend environment. You need to have a Talend Administration Center instance running and accessible by your team members before working on a remote project. You also need to configure the team members and project settings in Talend Administration Center to grant access and permissions for your project. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Version control - 7.3], [Talend Administration Center - 7.3]

NEW QUESTION # 22

What is the generic Input component used for in a Joblet design?

- A. Triggering a subJob
- B. Carrying data into a Joblet
- C. Triggering a Joblet
- D. Carrying data into a subJob

Answer: B

Explanation:

The generic Input component used for in a Joblet design is the tJobletInput component. This component is used to carry data into a Joblet from another component in the job that contains the Joblet. A Joblet is a reusable piece of a job that can be used in multiple jobs as a single component. A Joblet can have one or more input and output flows that connect it with other components in a job. To create these flows, you need to use generic input and output components, such as tJobletInput, tJobletOutput, tJobletTriggerInput, and tJobletTriggerOutput. These components allow you to define schemas and triggers for your Joblet without depending on specific components.

The tJobletInput component is not used for triggering a Joblet, triggering a subjob, or carrying data into a subjob. These are different concepts and functionalities in Talend Studio. A trigger is a link that activates a subjob or a component based on a condition or an event. A subjob is a part of a job that consists of one or more components connected by data flows or triggers. A subjob can be triggered by another subjob using triggers such as OnSubjobOk, OnSubjobError, Run if, etc. A subjob can also carry data into another subjob using data flows such as main, lookup, reject, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [tJobletInput properties - 7.3], [Joblets - 7.3], [Triggers - 7.3]

NEW QUESTION # 23

What is the default port for the REST Endpoint when using tRESTRequest in Talend Studio?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Comprehensive and Detailed Explanation:
The defaultREST endpoint port for tRESTRequest in Talend Studio is 8090.
* Port 8090 (Correct Answer - Option D):
* When running a REST service insideTalend Studio, the default listening port is8090.
* This can be changed in the component settings if required.
* Other port options explained:
* 5040 & 5070: Not default ports used for Talend REST services.
* 8040: Used inTalend Runtime, not in Studio.

NEW QUESTION # 24

You are building a Job to run outsode Talend Studio that must run on both Linux and Windows.
Which action should you take when building the Job?

- A. Select Build Job because Jobs are runnable on all platforms
- B. Specify All for the Shell launcher option in the Build Job windows.
- C. Build one package for each platform.
- D. Configure the Job properties building the Job.

Answer: B

Explanation:

To build a job to run outside Talend Studio that must run on both Linux and Windows, you need to select Build Job because jobs are runnable on all platforms. The Build Job option allows you to export your job as an executable file that can be run independently

from Talend Studio on any platform that supports Java. You can access this option by right-clicking on your job in the Repository tree view and selecting Build Job. This will open a dialog box where you can configure the build settings, such as destination folder, archive name, context, etc.

You do not need to specify All for the Shell launcher option in the Build Job window, configure the job properties before building the job, or build one package for each platform. These methods are not necessary or available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio:
