

# **New Reliable Managing-Cloud-Security Dumps Sheet | High-quality Managing-Cloud-Security: WGU Managing Cloud Security (JY02) 100% Pass**

What's more, part of that Pass4Test Managing-Cloud-Security dumps now are free: <https://drive.google.com/open?id=1VxUYnVt8nj9uBXfOWlx824OjPYTwwxRj>

The second format is a web-based format that can be accessed from browsers like Firefox, Microsoft Edge, Chrome, and Safari. It means you don't need to download or install any software or plugins to take the WGU Managing Cloud Security (JY02) practice test. The web-based format of the WGU Managing-Cloud-Security Certification Exams practice test supports all operating systems. The third and last format is desktop software format which can be accessed after installing the software on your WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) Windows Pc or Laptop. These formats are built especially for the students so they don't stop preparing for the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) certification.

The Managing-Cloud-Security practice questions that are best for you will definitely make you feel more effective in less time. The cost of Managing-Cloud-Security studying materials is really very high. Selecting our study materials is definitely your right decision. Of course, you can also make a decision after using the trial version. With our Managing-Cloud-Security Real Exam, we look forward to your joining. And our Managing-Cloud-Security exam braindumps will never let you down.

## **Reliable Managing-Cloud-Security Braindumps Free - Reliable Managing-Cloud-Security Exam Voucher**

The most important thing for preparing the Managing-Cloud-Security exam is reviewing the essential point. In order to service the candidates better, we have issued the Managing-Cloud-Security test prep for you. Our company has accumulated so much experience about the test. So we can predict the real test precisely. Almost all questions and answers of the real exam occur on our Managing-Cloud-Security Guide braindumps. That means if you study our study guide, your passing rate is much higher than other candidates. Preparing the exam has shortcut.

## **WGU Managing Cloud Security (JY02) Sample Questions (Q181-Q186):**

### NEW QUESTION # 181

Which risk is assumed by an enterprise that chooses to use vendor-provided cloud resources?

- A. Loss of certification
- **B. Multitenant deployments**
- C. Lack of skilled technical personnel
- D. Incompatible infrastructure

**Answer: B**

Explanation:

By choosing vendor-provided cloud resources, an enterprise inherently assumes the risk associated with multitenant deployments. Managing Cloud principles explain that public and some community cloud environments are built on shared infrastructure where multiple customers' workloads coexist on the same physical hardware.

Although strong logical isolation mechanisms are implemented by cloud providers, multitenancy introduces risks such as data leakage, side-channel attacks, and resource contention. These risks do not exist to the same degree in dedicated on-premises environments. Enterprises must therefore rely on the provider's ability to enforce isolation, access control, and monitoring. The other options are not intrinsic cloud risks. Incompatible infrastructure can be addressed through architecture design, lack of skilled personnel is an internal organizational issue, and loss of certification relates to compliance management. Therefore, multitenant deployments represent the risk assumed when using vendor-provided cloud resources.

### NEW QUESTION # 182

An organization is implementing a new hybrid cloud deployment. Before granting access to any of the resources, the security team wants to ensure that all employees are checked against a database to see if they are allowed to access the requested resource. Which type of security control is the organization leveraging for its employees?

- **A. Authorization**
- B. Authentication
- C. Web application firewall (WAF)
- D. Antispyware program

**Answer: A**

Explanation:

The described control is authorization, which occurs after authentication. Authorization determines what resources a user can access based on their role, attributes, or policies stored in an access control database.

Authentication confirms identity, but authorization validates permissions. WAFs protect applications from malicious traffic, and antispyware tools detect malware. Neither applies to access decisions.

By checking users against a database of permissions, the organization enforces the principle of least privilege, ensuring employees only access the resources necessary for their role. This strengthens data protection, reduces insider threats, and aligns with compliance requirements for access governance.

### NEW QUESTION # 183

An organization experienced an unplanned event. As a result, the customers using the web application face a loss of service. What does the incident generated in this situation seek to resolve?

- A. Bug
- **B. Disruption**
- C. Error
- D. Change

**Answer: B**

Explanation:

The unplanned event described is a disruption of service. In IT service management frameworks like ITIL, disruptions occur when an incident prevents normal service delivery. The goal of incident management is to restore service quickly and minimize impact on customers.

A bug refers to a software defect, which may cause disruptions but is not synonymous with the event itself.

An error represents a fault, while change refers to deliberate modifications. Only disruption captures the unplanned nature of service

unavailability.

Recognizing incidents as disruptions helps organizations apply structured processes such as escalation, root-cause analysis, and communication. It ensures resilience in cloud-based environments where uptime is a key performance indicator and customer trust is closely tied to availability.

#### NEW QUESTION # 184

Which design component contains both a remotely accessible application programming interface (API) and a web graphical user interface?

- A. Metastructure
- **B. Management**
- C. Applistructure
- D. Infrastructure

**Answer: B**

Explanation:

The Management component contains both a remotely accessible application programming interface (API) and a web-based graphical user interface. Managing Cloud documentation explains that the management layer is responsible for provisioning, monitoring, configuration, and administration of cloud resources.

This component enables administrators and automation tools to interact with cloud services programmatically through APIs, while also providing human-accessible web consoles for operational management. The dual-interface design supports scalability, automation, and ease of use.

Infrastructure provides raw compute, storage, and networking. Applistructure refers to deployed applications and services, while metastructure supports orchestration and abstraction. Therefore, the management component is the correct answer.

#### NEW QUESTION # 185

Which cloud infrastructure risk is the responsibility of the cloud provider?

- A. Security governance
- B. Data security
- C. Application security
- **D. Physical security**

**Answer: D**

Explanation:

Physical security is a cloud infrastructure risk that is the responsibility of the cloud provider. Managing Cloud principles explain that providers are responsible for securing data center facilities, including buildings, hardware, power systems, and environmental controls.

This includes access controls, surveillance, guards, and protection against physical threats such as theft, vandalism, and natural disasters. Customers do not have physical access to cloud data centers and therefore rely entirely on the provider to manage these risks.

Data security and application security are typically shared responsibilities, while security governance is largely the customer's responsibility. Therefore, physical security is the correct answer.

#### NEW QUESTION # 186

.....

After successful completion of the Managing-Cloud-Security certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period. However, to pass the Managing-Cloud-Security Exam you have to prepare well. For the quick Managing-Cloud-Security exam preparation the Managing-Cloud-Security Questions are the right choice.

**Reliable Managing-Cloud-Security Braindumps Free:** <https://www.pass4test.com/Managing-Cloud-Security.html>

WGU Reliable Managing-Cloud-Security Dumps Sheet More importantly, there are a lot of experts in our company, WGU Reliable Managing-Cloud-Security Dumps Sheet Passing the exam easily, Managing-Cloud-Security exam is recognized as one of the most

useful technology, which means that you can rely on our Managing-Cloud-Security valid study questions, As is known to all the official passing rate for Managing-Cloud-Security certification without WGU Managing-Cloud-Security test braindumps is not too high, many examinees have to prepare for one exam too long, part of candidates have to attend the exam twice or more, On the other hand, if you fail to pass the exam with our Managing-Cloud-Security exam questions unfortunately, you can receive a full refund only by presenting your transcript.

How is this memory allocation performed, Gradients are either Managing-Cloud-Security radial or linear, More importantly, there are a lot of experts in our company, Passing the exam easily.

Managing-Cloud-Security exam is recognized as one of the most useful technology, which means that you can rely on our Managing-Cloud-Security valid study questions, As is known to all the official passing rate for Managing-Cloud-Security certification without WGU Managing-Cloud-Security test braindumps is not too high, many examinees have to prepare for one exam too long, part of candidates have to attend the exam twice or more.

## The WGU Managing-Cloud-Security Web-Based Practice Exam

On the other hand, if you fail to pass the exam with our Managing-Cloud-Security exam questions unfortunately, you can receive a full refund only by presenting your transcript.
