Don't need a lot of time and money, only 30 hours of special training, and you can easily pass your first time to attend IAPP Certification CIPT Exam. DumpsTests are able to provide you with test exercises which are closely similar with real exam questions.

Who should take the CIPT exam

The **CIPT Exam** is ideal for those tech pros that want to accelerate their data privacy career. When looking at the role that a CIPT certified professional would play, it's most relevant to those that develop, engineer, and audit IT services, applications, and devices. Those taking the course will develop an understanding of privacy-related issues and practices in the context of the design and implementation of information and communication technologies and systems.

Through free demo, you can also know what the complete version is like. In addition, with experienced experts to compile the CIPT Exam Dumps, quality can be guaranteed. Therefore, if you choose us, you can use them at ease. We have online and offline chat service stuff, who are quite familiar with CIPT study guide, if you have any questions, you can consult us.

IAPP CIPT (Certified Information Privacy Technologist) Exam is a globally recognized certification program that is designed to validate the technical skills and knowledge of IT professionals in the field of privacy. CIPT exam covers a wide range of topics, including data protection regulations, privacy principles, compliance frameworks, and privacy-enhancing technologies. Certified Information Privacy Technologist (CIPT) certification program is offered by the International Association of Privacy Professionals (IAPP), which is the largest and most respected privacy organization in the world.

The IAPP CIPT exam covers a wide range of topics such as privacy laws and regulations, data protection strategies, privacy by design, privacy engineering, and privacy-enhancing technologies. CIPT exam is intended for professionals who work in privacy technology, including privacy officers, data protection officers, privacy consultants, IT professionals, and software developers. Certified Information Privacy Technologist (CIPT) certification is highly valued in the industry and is a testament to an individual's commitment to privacy and data protection.

The CIPT Certification is an essential certification for professionals who are responsible for managing and protecting personal data in their organizations. It is a globally recognized certification that validates the knowledge and skills of professionals in managing and protecting personal data. The CIPT certification exam is a rigorous and comprehensive test that requires extensive preparation, but it is a valuable investment in the future for privacy and data protection professionals.

Our CIPT learning materials are famous for high quality, and we have the experienced experts to compile and verify CIPT exam dumps, the correctness and the quality can be guaranteed. CIPT learning materials contain both questions and answers, and you can have a quickly check after you finish practicing. Moreover, we offer you free update for one year, and you can know the latest information about the CIPT Exam Materials if you choose us. The update version will be sent to your email automatically.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q78-Q83):

NEW QUESTION # 78

How can a hacker gain control of a smartphone to perform remote audio and video surveillance?

- A. By manipulating geographic information systems.
- **B. By installing a roving bug on the phone.**
- C. By accessing a phone's global positioning system satellite signal.
- D. By performing cross-site scripting.

Answer: B

Explanation:

Hackers can exploit various vulnerabilities to gain unauthorized access to smartphones and perform remote surveillance. Here's how a roving bug can be used:

* Roving Bug Installation: A roving bug is a type of software that can be covertly installed on a smartphone to enable remote audio and video surveillance. This malicious software can activate the phone's microphone and camera without the user's knowledge.

* Unauthorized Access: The installation of such software can occur through various means, including phishing attacks, malicious apps, or exploiting vulnerabilities in the phone's operating system.

* Surveillance Capabilities: Once installed, the hacker can remotely control the phone to eavesdrop on conversations, capture video footage, and monitor the user's activities.

* Privacy Breach: This type of intrusion represents a significant privacy breach, as it allows continuous monitoring and recording of the user's private moments and conversations.

Reference: The IAPP Information Privacy Technologist documentation outlines the various methods and risks associated with unauthorized access to personal devices, including the use of roving bugs for surveillance.

NEW QUESTION # 79

SCENARIO

Clean-Q is a company that offers house-hold and office cleaning services. The company receives requests from consumers via their website and telephone, to book cleaning services. Based on the type and size of service, Clean-Q then contracts individuals that are registered on its resource database - currently managed in-house by Clean-Q IT Support. Because of Clean-Q's business model, resources are contracted as needed instead of permanently employed.

The table below indicates some of the personal information Clean-Q requires as part of its business operations:

Category	Types of Personal Information
Customers	Name, address (location), contact information, billing information
Resources (contracted)	Name, contact information, banking details, address

Clean-Q has an internal employee base of about 30 people. A recent privacy compliance exercise has been conducted to align employee data management and human resource functions with applicable data protection regulation. Therefore, the Clean-Q permanent employee base is not included as part of this scenario.

With an increase in construction work and housing developments, Clean-Q has had an influx of requests for cleaning services. The

demand has overwhelmed Clean-Q's traditional supply and demand system that has caused some overlapping bookings. In a business strategy session held by senior management recently, Clean-Q invited vendors to present potential solutions to their current operational issues. These vendors included Application developers and Cloud-Q's solution providers, presenting their proposed solutions and platforms.

The Managing Director opted to initiate the process to integrate Clean-Q's operations with a cloud solution (LeadOps) that will provide the following solution on a single online platform: A web interface that Clean-Q accesses for the purposes of resource and customer management. This would entail uploading resource and customer information.

- * A customer facing web interface that enables customers to register, manage and submit cleaning service requests online.

- * A resource facing web interface that enables resources to apply and manage their assigned jobs.

- * An online payment facility for customers to pay for services.

If Clean-Q were to utilize LeadOps' services, what is a contract clause that may be included in the agreement entered into with LeadOps?

- **A. A provision that requires LeadOps to notify Clean-Q of any suspected breaches of information that involves customer or resource information managed on behalf of Clean-Q.**
- B. A provision that holds LeadOps liable for a data breach involving Clean-Q's information.
- C. A provision that allows Clean-Q to conduct audits of LeadOps' information processing and information security environment, at LeadOps' cost and at any time that Clean-Q requires.
- D. A provision prescribing technical and organizational controls that LeadOps must implement.

Answer: A

Explanation:

When engaging with a cloud service provider like LeadOps, it's critical to include specific clauses in the contract to ensure the protection and management of personal information. Here's why a notification clause is essential:

- * **Data Breach Notification:** A provision requiring LeadOps to notify Clean-Q of any suspected breaches ensures that Clean-Q can take immediate action to mitigate any potential damage, inform affected individuals, and comply with regulatory obligations.

- * **Regulatory Compliance:** Many data protection regulations, such as GDPR and CCPA, mandate timely notification of data breaches to both the regulatory authorities and the affected individuals. Including this clause ensures compliance with such laws.

- * **Risk Management:** Prompt notification allows Clean-Q to manage and address any risks associated with the breach, including public relations issues and potential legal liabilities.

- * **Transparency and Accountability:** This clause promotes transparency and accountability, ensuring that LeadOps maintains a high standard of data security and is responsible for informing Clean-Q about any security incidents.

Reference: The IAPP Information Privacy Technologist documentation emphasizes the importance of data breach notification clauses in contracts with third-party service providers to ensure regulatory compliance and effective risk management.

NEW QUESTION # 80

Which of the following statements describes an acceptable disclosure practice?

- A. Intermediaries processing sensitive data on behalf of an organization require stricter disclosure oversight than vendors.
- **B. An organization's privacy policy discloses how data will be used among groups within the organization itself.**
- C. When an organization discloses data to a vendor, the terms of the vendor's privacy notice prevail over the organization's privacy notice.
- D. With regard to limitation of use, internal disclosure policies override contractual agreements with third parties.

Answer: B

Explanation:

An acceptable disclosure practice involves transparently informing individuals about how their data will be used within the organization. This includes specifying data usage among different groups or departments within the organization. It is essential for maintaining trust and compliance with privacy regulations. The IAPP highlights that clear and comprehensive privacy policies help ensure that individuals are aware of the internal data flows and purposes, thus meeting legal and ethical standards (IAPP, "Privacy Policies and Notices").

NEW QUESTION # 81

SCENARIO

Please use the following to answer the next question:

Light Blue Health (LBH) is a healthcare technology company developing a new web and mobile application that collects personal health information from electronic patient health records. The application will use machine learning to recommend potential medical

treatments and medications based on information collected from anonymized electronic health records. Patient users may also share health data collected from other mobile apps with the LBH app.

The application requires consent from the patient before importing electronic health records into the application and sharing it with their authorized physicians or healthcare provider. The patient can then review and share the recommended treatments with their physicians securely through the app. The patient user may also share location data and upload photos in the app. The patient user may also share location data and upload photos in the app for a healthcare provider to review along with the health record. The patient may also delegate access to the app.

LBH's privacy team meets with the Application development and Security teams, as well as key business stakeholders on a periodic basis. LBH also implements Privacy by Design (PbD) into the application development process.

The Privacy Team is conducting a Privacy Impact Assessment (PIA) to evaluate privacy risks during development of the application. The team must assess whether the application is collecting descriptive, demographic or any other user related data from the electronic health records that are not needed for the purposes of the application. The team is also reviewing whether the application may collect additional personal data for purposes for which the user did not provide consent.

Regarding the app, which action is an example of a decisional interference violation?

- A. The app asks questions during account set-up to disclose family medical history that is not necessary for the treatment of the individual's symptoms.
- B. The app has a pop-up ad requesting sign-up for a pharmaceutical company newsletter.
- C. The app sells aggregated data to an advertising company without prior consent.
- D. The app asks income level to determine the treatment of care.

Answer: D

Explanation:

Asking for income level to determine treatment of care could be considered decisional interference because it could influence or interfere with an individual's ability to make decisions about their own healthcare. This type of information may not be necessary for providing medical recommendations and could potentially lead to discrimination or unequal treatment.

NEW QUESTION # 82

A valid argument against data minimization is that it?

- A. Decreases the speed of data transfers.
- B. Can limit business opportunities.
- C. Increases the chance that someone can be identified from data.
- D. Can have an adverse effect on data quality.

Answer: A

NEW QUESTION # 83
