Exam Code: C_BCBTP_2502
Total No. of Questions: 30
Passing Percentage: 70
Exam Duration: 60 Min

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 1

Which of the following can you do with SAP Datasphere? Note: There are 2 correct answers to this question.

- A. Create and consume in-memory caches
- B. Manage user accounts and authorizations
- C. Integrate data from different sources
- D. Provide a unified data and analytics platform

Answer C D

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 2

What are the main types of APIs commonly used in SAP BTP? Note: There are 2 correct answers to this question.

- A. SOAP APIs
- B. REST APIs
- C. FTP APIS
- D. RPC APIs

Answer A B

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 3

What are some of the SAP BTP commercial models? Note: There are 2 correct answers to this question.

- A. Modular Pricing
- B. Pay-As-You-Go
- C. Subscription
- D. Named User License

Answer B C

Itbraindumps was established in 2008, now we are the leading position in this field as we have good reputation of high-pass-rate C-BCBTP-2502 guide torrent materials. Our C-BCBTP-2502 exam questions are followed by many peers many years but never surpassed. We build a mature and complete C-BCBTP-2502 learning guide R&D system, customers' information safety system & customer service system since past 10 years. Every candidate who purchases our valid C-BCBTP-2502 Preparation materials will enjoy our high-quality guide torrent, information safety and golden customer service.

SAP C-BCBTP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	- Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

Topic 2	• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

Pass Guaranteed C-BCBTP-2502 - SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Unparalleled Frenquent Update

The Itbraindumps is also committed to ace the SAP C-BCBTP-2502 exam preparation journey and enable you to get success in the final SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite C-BCBTP-2502 exam. To achieve this objective the Itbraindumps is offering real, updated, and error-free SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite C-BCBTP-2502 Dumps in three easy-to-use and compatible formats. These formats are C-BCBTP-2502 PDF dumps files, desktop Itbraindumps C-BCBTP-2502 practice exam software, and web-based C-BCBTP-2502 practice test software.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q27-Q32):

NEW QUESTION # 27
Which of the following SAP BTP components enhances enterprise data governance?

- A. SAP AppGyver
- B. SAP Data Intelligence
- C. SAP BusinessObjects BI
- D. SAP Concur

Answer: B

Explanation:
Data governance is the practice of ensuring that data is accurate, available, and secure across an organization.
SAP Data Intelligence is the primary component within SAP BTP that addresses this need. It provides advanced metadata management and data cataloging capabilities, which are the foundations of governance. A data catalog acts like a "search engine" for enterprise data, allowing users to understand the origin (lineage), quality, and sensitivity of the information they are working with.
In a complex SAP Business Suite environment, data often moves through multiple stages and systems. SAP Data Intelligence tracks this "data lineage," showing how data was transformed as it moved from an ERP system to a reporting dashboard. This transparency is crucial for regulatory compliance (like GDPR) and for building trust in the data used for decision-making. If a financial report looks incorrect, governance tools allow IT to trace the data back to its source to find the error. By positioning Data Intelligence as the governance hub, SAP BTP ensures that the "Intelligent Enterprise" is built on a foundation of high-quality, trusted data. This is a significant differentiator from tools like SAP BusinessObjects (which focuses on reporting) or SAP Concur (which focuses on expenses), as Data Intelligence provides the underlying control layer for the entire data ecosystem.

NEW QUESTION # 28
What is a key feature of SAP BTP's AI capabilities?

- A. Automated decision-making with machine learning models.
- B. Limited AI functionalities restricted to specific SAP modules.
- C. Rule-based decision-making without machine learning.
- D. AI processing without cloud-based analytics support.

Answer: A

Explanation:

SAP BTP's approach to Artificial Intelligence is centered on the concept of "Business AI," which means AI is built specifically for business contexts and is deeply embedded within the SAP applications users use every day. A key feature of this capability is automated decision-making with machine learning (ML) models.

Unlike traditional rule-based systems that follow rigid "if-then" logic, ML models within BTP can analyze vast amounts of historical data to identify patterns and predict future outcomes. This allows the platform to provide recommendations, such as identifying the best supplier based on past performance or flagging potentially fraudulent financial transactions.

The AI Foundation on SAP BTP provides developers with ready-to-use services and tools to build, run, and manage AI-led extensions. This includes access to Large Language Models (LLMs) and specialized machine learning services that are pre-trained on business data. By positioning AI as a core component of BTP, SAP ensures that intelligence is not an afterthought but a central part of the business process. This enables a shift from reactive data entry to proactive, data-driven management. Furthermore, these AI capabilities are tightly integrated with SAP Analytics Cloud, ensuring that the insights generated by machine learning models are immediately actionable through intuitive visualizations and dashboards, thereby driving the digital transformation of the SAP Business Suite.

NEW QUESTION # 29

How does SAP LeanIX enhance business IT governance when integrated with SAP BTP?

- A. By providing IT landscape analysis and risk management.
- B. By eliminating enterprise architecture visualization.
- C. By preventing cloud-based integrations.
- D. By restricting governance frameworks to manual tracking.

Answer: A

Explanation:

IT governance is often a challenge during rapid digital expansion. As more services are deployed on SAP BTP, maintaining a clear overview of the "who, what, and where" becomes critical. SAP LeanIX enhances business IT governance by providing a structured framework for IT landscape analysis and risk management. It acts as a "single source of truth" for the enterprise architecture, documenting all applications, their dependencies, and the business capabilities they support.

When integrated with SAP BTP, LeanIX helps organizations avoid "SaaS sprawl" (the unmanaged growth of cloud applications). It provides visibility into which BTP services are being used and identifies potential security risks, such as applications running on outdated versions or services that lack proper data privacy controls. This level of transparency is essential for compliance and cost management. By analyzing the

"Technical Fit" and "Business Fit" of the IT landscape, LeanIX allows executives to make informed decisions about decommissioning legacy systems and investing in new BTP-driven innovations. This strategic positioning ensures that the evolution of the SAP Business Suite is governed by data rather than guesswork, reducing operational risk and ensuring that the IT infrastructure is robust, secure, and fully aligned with the organization's long-term goals.

NEW QUESTION # 30

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP Business Network
- B. SAP AI Core
- C. SAP Business Process Intelligence
- D. SAP Concur

Answer: B,C

Explanation:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying

services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

NEW QUESTION # 31
How does SAP Business AI enhance SAP BTP's capabilities?

- A. By replacing all existing business processes with AI-only solutions.
- B. By enabling AI-driven automation and decision-making.
- C. By eliminating machine learning capabilities.
- D. By restricting AI usage to SAP ERP modules.

Answer: B

Explanation:
SAP Business AI is the strategic layer that infuses intelligence directly into the business applications running on SAP BTP. It enhances the platform's capabilities by enabling AI-driven automation and intelligent decision-making across the entire enterprise value chain. Unlike generic AI, SAP Business AI is trained on industry-specific data and business semantics, ensuring that the insights it provides are relevant to specific corporate functions like finance, supply chain, and HR.
By leveraging services within BTP-such as SAP AI Core and SAP AI Launchpad-Business AI allows organizations to move from manual, reactive processes to proactive, automated ones. For example, it can automate the matching of incoming payments to invoices or predict potential supply chain disruptions before they occur. This positioning is critical for the SAP Business Suite because it doesn't just add a "feature"; it transforms the fundamental nature of the software from a "system of record" to a "system of intelligence." This allows human workers to focus on higher-value strategic tasks while the AI handles high-volume, repetitive data processing and provides data-backed recommendations, thereby significantly increasing organizational agility and competitive advantage.
