Google Associate Cloud Engineer Exam actual questions - Associate-Cloud-Engineer torrent pdf - Google Associate Cloud Engineer Exam training vce

Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our Associate-Cloud-Engineer study tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem. Our specialists check daily to find whether there is an update on the Associate-Cloud-Engineer study tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our Associate-Cloud-Engineer Test Torrent has the latest knowledge and keep up with the pace of change. Many people are worried about electronic viruses of online shopping. But you don't have to worry about our products. Our Associate-Cloud-Engineer exam materials are absolutely safe and virus-free. If you encounter installation problems, we have professional staff to provide you with remote online guidance. We always put your needs in the first place.

We are here divide grieves with you to help you pass your Google Associate-Cloud-Engineer exam with ease. You can abandon the time-consuming thought from now on. You won't regret your decision of choosing our Google Associate-Cloud-Engineer study guide. In contrast, they will inspire your potential without obscure content to feel. After getting our Associate-Cloud-Engineer Exam Prep, you will not live under great stress during the Associate-Cloud-Engineer exam period.

Associate-Cloud-Engineer Reliable Test Vce | Valid Associate-Cloud-Engineer Exam Topics

One of the biggest advantages of our Associate-Cloud-Engineer learning guide is that it you won't loss anything if you have a try with our Associate-Cloud-Engineer study materials. you can discover the quality of our exam dumps as well as the varied displays that can give the most convenience than you can ever experience. Both of the content and the displays are skillfully design on the purpose that Associate-Cloud-Engineer Actual Exam can make your learning more targeted and efficient.

Google Associate Cloud Engineer Exam Sample Questions (Q236-Q241):

NEW QUESTION # 236
You significantly changed a complex Deployment Manager template and want to confirm that the dependencies of all defined resources are properly met before committing it to the project. You want the most rapid feedback on your changes. What should you do?

- A. Monitor activity of the Deployment Manager execution on the Stackdriver Logging page of the GCP Console.
- B. Use granular logging statements within a Deployment Manager template authored in Python.
- C. Execute the Deployment Manager template using the --preview option in the same project, and observe the state of interdependent resources.

- D. Execute the Deployment Manager template against a separate project with the same configuration, and monitor for failures.

Answer: C

Explanation:
Reference:
https://cloud.google.com/deployment-manager/docs/deployments/updating-deployments

NEW QUESTION # 237
You work for a financial services company that operates as a stock market broker. Your company is planning to migrate to Google Cloud. You need to plan the network design in Google Cloud. Your design must:
* Minimize the latency between all production systems
* Minimize costs related to your development environmentWhat should you do?
Minimize costs related to your development environmentWhat should you do?

- A. Create a VPC in the Premium Tier and deploy both production and development workloads on this VPC.
- B. Create a VPC in the Standard Tier and deploy both production and development workloads on this VPC.
- C. Create a VPC in the Standard Tier and one in the Premium Tier. Deploy production workloads in the Standard Tier and development workloads in the Premium Tier.
- D. Create a VPC in the Standard Tier and one in the Premium Tier. Deploy development workloads in the Standard Tier and production workloads in the Premium Tier.

Answer: D

Explanation:
Google Cloud offers two network service tiers: Premium and Standard.
* Premium Tier: Uses Google's global, low-latency, and highly reliable backbone for most of the traffic's route, resulting in minimal latency. This is essential for latency-sensitive financial production systems.
* Standard Tier: Uses Google's network for part of the route and then public ISPs. It offers a lower cost compared to Premium Tier but potentially higher latency. This is suitable for non-critical, cost-sensitive development workloads.
The optimal design is to use two separate VPCs (or at least different networking setups if using Shared VPC), with the Premium Tier for production (minimizing latency) and the Standard Tier for development (minimizing cost).
Reference: Google Cloud Network Service Tiers documentation. "Premium Tier provides the best performance and availability... Standard Tier is a lower-cost option."

NEW QUESTION # 238
You will have several applications running on different Compute Engine instances in the same project. You want to specify at a more granular level the service account each instance uses when calling Google Cloud APIs. What should you do?

- A. When creating the instances, assign the name of each Service Account as instance metadata
- B. After starting the instances, use gcloud compute instances update to assign the name of the relevant Service Account as instance metadata
- C. After starting the instances, use gcloud compute instances update to specify a Service Account for each instance
- D. When creating the instances, specify a Service Account for each instance

Answer: D

Explanation:
https://cloud.google.com/compute/docs/access/service-
accounts#associating_a_service_account_to_an_instance

NEW QUESTION # 239
Your company uses BigQuery for data warehousing. Over time, many different business units in your company have created 1000+ datasets across hundreds of projects. Your CIO wants you to examine all datasets to find tables that contain an employee_ssn column. You want to minimize effort in performing this task. What should you do?

- A. Write a script that loops through all the projects in your organization and runs a query on INFORMATION_SCHEMA.COLUMNS view to find the employee_ssn column.

- B. Write a Cloud Dataflow job that loops through all the projects in your organization and runs a query on INFORMATION_SCHEMA.COLUMNS view to find employee_ssn column.
- C. Write a shell script that uses the bq command line tool to loop through all the projects in your organization.
- D. Go to Data Catalog and search for employee_ssn in the search box.

Answer: D

Explanation:
https://cloud.google.com/bigquery/docs/quickstarts/quickstart-web-ui?authuser=4

NEW QUESTION # 240
Your company would like to store invoices and other financial documents in Google Cloud. You need to identify a Google-managed solution to store this information for your company. You must ensure that the documents are kept for a duration of three years. Your company's analysts need frequent access to invoices from the past six months. After six months, invoices should be archived for audit purposes only. You want to minimize costs and follow Google-recommended practices. What should you do?

- A. Use Cloud Storage with Object Lifecycle Management to change the object storage class to Coldline after six months.
- B. Use Cloud Storage with Object Lifecycle Management to change the object storage class to Standard after six months.
- C. Store your documents on Filestore and move the documents to Cloud Storage with object storage class set to Standard after six months.
- D. Store your documents on Filestore and move the documents to Cloud Storage with object storage class set to Coldline after six months.

Answer: A

Explanation:
* Storage Solution: Cloud Storage is the Google-managed, highly durable, and scalable object storage solution ideal for storing unstructured documents like invoices.
* Tiering/Cost Optimization:
* For frequent access (past 6 months), the initial storage class should be Standard (lowest latency, higher storage cost).
* For archived/audit purposes only (after 6 months), the access frequency is extremely low.
Coldline Storage is the lowest-cost storage class designed for data accessed infrequently (once a quarter or less), minimizing overall cost.
* Automation: Object Lifecycle Management is the native Cloud Storage feature used to automatically transition objects between storage classes (e.g., Standard $\to$ Coldline) based on time (e.g., after 6 months), fulfilling the requirements for automation and cost minimization.
Reference: Google Cloud Storage documentation, specifically Object Lifecycle Management and Storage Class comparison (Standard, Nearline, Coldline, Archive).

NEW QUESTION # 241
......

Our customer service is available all day, and your problems can be solved efficiently at any time. Last but not least, we can guarantee the security of the purchase process of Associate-Cloud-Engineer Test Questions and the absolute confidentiality of customer information. You do not have to worry about these issues, because we know that this is a basic condition for us to establish a good business model. If you have any questions, you can always contact us online or email us. We will reply as soon as possible.
