CCFA-200b Exam Sample Questions - CCFA-200b Pass Guaranteed

How you can gain the CCFA-200b certification with ease in the least time? The answer is our CCFA-200b study materials for we have engaged in this field for over ten years and we have become the professional standard over all the exam materials. You can free download the demos which are part of our CCFA-200b Exam Braindumps, you will find that how good they are for our professionals devote of themselves on compiling and updating the most accurate content of our CCFA-200b exam questions.

CrowdStrike Falcon Administrator Sample Questions (Q68-Q73):

NEW QUESTION # 68

You need to have the ability to monitor suspicious VBA macros. Which Sensor Visibility setting should be turned on within the Prevention policy settings?

- A. Engine (Full Visibility)
- B. Additional User Mode Data
- **C. Script-based Execution Monitoring**
- D. Interpreter-Only

Answer: C

Explanation:

Turn on the Script-Based Execution Monitoring prevention policy setting to enable the "Falcon sensor to monitor the contents of scripts and shells that are popular mechanisms for executing malicious code on hosts. This setting does not kill or block scripts."

Scripting languages:

Excel 4.0 macros

JScript

VBA Macros

VBScript

The Sensor Visibility setting that should be turned on within the Prevention policy settings to monitor suspicious VBA macros is Script-based Execution Monitoring. Script-based Execution Monitoring is a feature that enables the Falcon sensor to monitor and prevent malicious script execution on Windows systems. The feature uses machine learning and behavioral analysis to detect suspicious scripts or commands executed by various script interpreters, such as PowerShell, WScript, CScript, or Bash. VBA (Visual Basic for Applications) is a scripting language that can be embedded in Microsoft Office documents, such as Word or Excel. VBA macros can be used to automate tasks or perform actions within the documents, but they can also be abused by attackers to deliver malware or execute malicious code. Script-based Execution Monitoring can help detect and prevent such attacks by monitoring the contents of VBA macros for execution of malicious content.

NEW QUESTION # 69

Where should you look to find the history of the successes and failures for any Falcon Fusion workflows?

- **A. Workflow Execution log**
- B. Workflow Audit log
- C. Custom Alert History
- D. Falcon UI Audit Trail

Answer: A

Explanation:

The place where you can find the history of the successes and failures for any Falcon Fusion workflows is the Workflow Execution log. The Workflow Execution log in the Workflow Management option allows you to view the status and results of workflow executions triggered by detection events. You can filter the log by workflow name, status, start and end time, and detection ID. You can also view the details of each execution, including the actions performed, the output received, and any errors encountered. This log can help you troubleshoot potential failures or issues with your workflows.

NEW QUESTION # 70

How can a API client secret be viewed after it has been created?

- A. The API client secret can be provided by support via direct email request from a Falcon Administrator
- **B. The API client secret must be reset or a new client created as the secret cannot be viewed after it has been created**
- C. Selecting "show secret" within the 3-dot dropdown menu will reveal the secret for the selected api client
- D. Within the API management page, API client secrets can be accessed within the "edit client" functionality

Answer: B

Explanation:

The way an API client secret can be viewed after it has been created is that the API client secret must be reset or a new client created as the secret cannot be viewed after it has been created.

As explained in question 137, an API client secret is only displayed once during creation for security reasons. If you lose or forget your API client secret, you cannot view it again in the Falcon console. You have two options to resolve this issue: either reset your API client secret or create a new API client. Resetting your API client secret will generate a new secret for your existing API client, which will invalidate any previous secret. Creating a new API client will generate a new API client ID and secret, which will require you to update any applications or scripts that use the Falcon APIs.

NEW QUESTION # 71

There are a significant number of false positive detections from your developers that are getting blocked and quarantined by Falcon. What Indicator of Compromise (IOC) action would be the best option?

- A. Allow (displayed as Allow in the console)
- B. No action (displayed as None in the console)
- C. Prevent (displayed as Blocked in the console)
- **D. Detect Only (displayed as Detect only in the console)**

Answer: D

NEW QUESTION # 72

Where can you modify settings to permit certain traffic during a containment period?

- A. Host Settings
- B. Prevention Policy
- **C. Containment Policy**
- D. Firewall Settings

Answer: C

Explanation:

The administrator can modify settings to permit certain traffic during a containment period by creating or editing a Containment Policy. This policy allows users to specify which ports, protocols and IP addresses are allowed or blocked during network containment. The other options are either incorrect or not related to network containment.

NEW QUESTION # 73

.....

We consider the actual situation of the test-takers and provide them with high-quality learning materials at a reasonable price. Choose the CCFA-200b study materials absolutely excellent quality and reasonable price, because the more times the user buys the CCFA-200b study materials, the more discount he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the CCFA-200b Study Materials, our staff will help solve them as soon as possible.
