---

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Advanced FortiSASE Solutions: This section of the exam measures the expertise of Solution Architects and validates the ability to work with advanced FortiSASE features. It covers deployment of SD-WAN using FortiSASE, implementation of Zero Trust Network Access (ZTNA), and the overall role of FortiSASE in optimizing enterprise connectivity. The section highlights how these advanced solutions improve flexibility, enforce zero-trust principles, and extend security controls across distributed networks and cloud systems.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>SASE Architecture and Components: This section of the exam measures the skills of Network Engineers and introduces the fundamentals of SASE within enterprise environments. Candidates are expected to understand the SASE architecture, identify FortiSASE components, and build deployment cases for real-world scenarios. The content emphasizes how SASE can be integrated into a hybrid network, showcasing secure design principles and the use of FortiSASE capabilities to support business and security objectives.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Analytics and Monitoring: This section of the exam measures the skills of Security Analysts and emphasizes the monitoring and reporting aspects of FortiSASE. Candidates are expected to configure dashboards, logging settings, and analyze reports for user traffic and security issues. Additionally, they must use FortiSASE logs to identify potential threats and provide insights into incidents or abnormal behavior. The focus is on leveraging analytics for operational visibility and strengthening the organization's security posture.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>SASE Deployment: This section of the exam measures the knowledge of Implementation Consultants and focuses on the practical aspects of deploying FortiSASE. Candidates will explore user onboarding methods, configuration of administration settings, and the application of security posture checks with compliance rules. The exam also includes key functions such as SIA, SSA, and SPA, alongside the design of security profiles that perform effective content inspection. By combining these tasks, learners demonstrate readiness to roll out secure and scalable deployments.</li> </ul>

## Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Which two purposes is the dedicated IP address used for in a FortiSASE deployment? (Choose two.)

- A. For regulatory compliance
- B. For allocation and assignment of unique IP addresses to remote users
- C. For user access control to FortiSASE
- D. For isolation and identification

**Answer: A,D**

### NEW QUESTION # 15

An organization needs to resolve internal hostnames using its internal rather than public DNS servers for remotely connected endpoints. Which two components must be configured on FortiSASE to achieve this? (Choose two.)

- A. Split tunnelling destinations
- B. DNS filter
- C. Split DNS rules
- D. SSL deep inspection

**Answer: A,C**

Explanation:

To resolve internal hostnames using internal DNS servers for remotely connected endpoints, the following two components must be configured on FortiSASE:

Split DNS Rules:

Split DNS allows the configuration of specific DNS queries to be directed to internal DNS servers instead of public DNS servers. This ensures that internal hostnames are resolved using the organization's internal DNS infrastructure, maintaining privacy and

accuracy for internal network resources.

Split Tunneling Destinations:

Split tunneling allows specific traffic (such as DNS queries for internal domains) to be routed through the VPN tunnel while other traffic is sent directly to the internet.

By configuring split tunneling destinations, you can ensure that DNS queries for internal hostnames are directed through the VPN to the internal DNS servers.

FortiOS 7.2 Administration Guide: Provides details on configuring split DNS and split tunneling for VPN clients.

FortiSASE 23.2 Documentation: Explains the implementation and configuration of split DNS and split tunneling for securely resolving internal hostnames.

### NEW QUESTION # 16

Refer to the exhibit.

To allow access, which web filter configuration must you change on FortiSASE?

- A. FortiGuard category-based filter
- B. inline cloud access security broker (CASB) headers
- C. content filter
- D. URL Filter

**Answer: C**

### NEW QUESTION # 17

Which event log subtype captures FortiSASE SSL VPN user creation?

- A. VPN Events
- B. User Events
- C. Endpoint Events
- D. Administrator Events

**Answer: B**

Explanation:

The event log subtype that captures FortiSASE SSL VPN user creation is User Events . This subtype is specifically designed to log activities related to user management, such as creating, modifying, or deleting user accounts. When an SSL VPN user is created, it falls under this category because it involves adding a new user to the system.

Here's why the other options are incorrect:

A . Endpoint Events: These logs pertain to activities related to endpoint devices, such as device registration, compliance checks, or security posture assessments. SSL VPN user creation is unrelated to endpoint events.

B . VPN Events: These logs capture activities related to VPN connections, such as session establishment, termination, or errors. While SSL VPN usage generates VPN events, the creation of a user account itself is not logged under this subtype.

D . Administrator Events: These logs track actions performed by administrators, such as configuration changes or policy updates. While an administrator might create the SSL VPN user, the specific event of user creation is categorized under User Events, not Administrator Events.

### NEW QUESTION # 18

An administrator must restrict endpoints from certain countries from connecting to FortiSASE.

Which configuration can achieve this?

- A. Configure a network lockdown policy on the endpoint profiles.
- B. Configure source IP anchoring to restrict access from the specified countries.
- C. Configure a geography address object as the source for a deny policy.
- D. Configure geofencing to restrict access from the required countries.

**Answer: D**

Explanation:

Geofencing allows the administrator to restrict or allow access to FortiSASE services based on the geographic location of the endpoints, effectively blocking connections from specified countries.
