EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

Question:

What method does FCIP use to transport Fibre Channel SAN data?

- A. FCIP encapsulates and tunnels FC SAN data over Ethernet networks.
- B. FCIP separates LAN and FC SAN data and tunnels FC SAN data over IP networks.
- **C. FCIP encapsulates and tunnels FC SAN data over IP networks.**
- D. FCIP splits LAN and FC SAN data and tunnels FC SAN data over Ethernet networks.

Answer: C

Explanation:

FCIP (Fibre Channel over IP) is a protocol used to connect Fibre Channel SANs across geographically dispersed locations over IP networks. It does this by encapsulating Fibre Channel frames into IP packets (Layer 3). This allows FC SAN traffic to be

transmitted across IP-based WANs.

- * Ethernet networks(Layer 2) are not involved in the FCIP encapsulation process directly because FCIP uses IP packets.
- * Splitting LAN/SAN data is not the method used; FCIP encapsulates all FC frames.
- * Separating LAN and SAN data also does not describe the tunneling function.

NEW QUESTION # 25

Question:

A company is planning to implement an FC-NVMe SAN. Other than servers with NVMe HBAs, which two other components are required to build this type of SAN?

- A. Specialized NVMe-oF drivers on all servers
- B. **FC-NVMe switches**
- C. **NVMe storage systems**
- D. A dedicated 100 Gb/s Ethernet network
- E. Only NVMe SSDs in servers

Answer: B,C

Explanation:

To implement an FC-NVMe SAN(NVMe over Fibre Channel), you need:

NVMe storage systems that expose NVMe namespaces.

FC-NVMe capable switches that support the new NVMe protocol over Fibre Channel.
Servers with NVMe HBAs(already mentioned in the question).

- * Option B: Ethernet networks are for NVMe-oF over TCP/RoCE, not FC-NVMe.
- * Option E: These drivers are for TCP/RoCE, not FC transports.

NEW QUESTION # 26

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Reduces required maintenance time for IT resources
- B. **Maximizes application and information availability**
- C. Avoids security risks that expose business data
- D. Reduces the cost of protecting data

Answer: B

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

- * Local failures(disk, server, or site outages)
- * Natural disasters(floods, fires)
- * Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

NEW QUESTION # 27

Question:

When troubleshooting a virtual machine, which file is most likely to provide a detailed history of the VM's behavior?

- A. Virtual disk file
- B. Memory state file
- C. **Log file**
- D. Configuration file

Answer: C

Explanation:

Log files record events and messages related to the operations of a virtual machine. They provide detailed information about the VM's behavior, errors, and system messages, which are crucial for troubleshooting.

NEW QUESTION # 28

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Migrates data from a data center to the cloud at no cost
- B. **Enables efficient and optimized storage and management of information**
- C. Reduces the amount of data to replicate, migrate, and back up
- D. Reduces the complexity of managing information by creating silos of storage

Answer: B

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.
