1Z0-1111-25 PDF Cram Exam - 1Z0-1111-25 Valid Exam Bootcamp

Compared with the other 1Z0-1111-25 exam questions providers' three months or five months on their free update service, we give all our customers promise that we will give one year free update on the 1Z0-1111-25 study quiz after payment. In this way, we can help our customers to pass their exams with more available opportunities with the updated 1Z0-1111-25 Preparation materials. You can feel how considerate our service is as well!

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q41-Q46):

NEW QUESTION # 41

Your team has been tasked with debugging a Cloud Native application developed using the following Oracle Cloud Infrastructure (OCI) services: Object Storage, Events, Functions, API Gateway, and Autonomous Database. Which of these is NOT a valid option for troubleshooting issues in OCI?

- A. Configure the application to send logs into OCI Logging service.
- B. Trace performance issues in OCI Application Performance Monitoring service by enabling Function traces.

- C. View service metric information from the OCI Monitoring service.
- D. Configure a Service Connector to automatically send logs into the OCI Logging Analytics service.
- E. Leverage OCI Cloud Guard to extract and visualize debug logs generated by your application.

Answer: E

Explanation:

Troubleshooting a cloud-native app leverages OCI observability tools:

Invalid: Leverage OCI Cloud Guard to extract and visualize debug logs (D): Cloud Guard is a security posture management and threat detection service, not designed for extracting or visualizing application debug logs.

Why A, B, C, and E are valid:

A: Monitoring provides service metrics (e.g., Function invocation latency).

B: Service Connector moves logs to Logging Analytics for analysis.

C: APM traces Functions performance issues.

E: Logging Service collects app logs directly.

Cloud Guard focuses on security, not debugging.

NEW QUESTION # 42

In Application Performance Monitoring (APM), a distributed tracing user initiates a request through a browser. What is the first span called?

- A. Ajax call
- B. Root span
- C. Trace ID

Answer: B

Explanation:

In distributed tracing within OCI APM:

Root span (C): The first span in a trace, representing the entry point of a user request (e.g., an HTTP request from a browser). It has no parent span and initiates the chain of subsequent spans across services.

Why not A or B?

Ajax call (A): A type of request, not a span term.

Trace ID (B): A unique identifier for the entire trace, not a span.

The root span is foundational to tracing a request's journey.

NEW QUESTION # 43

Which Logging Analytics concept represents an asset on your host that could provide log data?

- A. Association
- B. Parser
- C. Source
- D. Entity

Answer: C

Explanation:

In OCI Logging Analytics, a Source defines the origin of log data from an asset on a host.

Source (B): Represents a log-generating asset (e.g., a file, database audit log, or Windows event log), specifying its location, format, and collection frequency. It's associated with an Entity to enable log ingestion and parsing.

Why not A, C, or D?

Association (A): Links a Source to an Entity, not the asset itself.

Entity (C): A logical representation of a resource (e.g., a host), not the log source.

Parser (D): Extracts fields from logs, not the asset providing data.

Sources are foundational to log collection in Logging Analytics.

NEW QUESTION # 44

You have configured an Alarm Definition in the Oracle Cloud Infrastructure (OCI) Monitoring service to send notifications through

email. The alarm should resend notifications at specified intervals if the alarm continues to be in the firing state. A subscriber in the Notifications Topic complains about not receiving multiple emails upon failures. Which of the following could be the possible cause of this issue?

- A. Trigger Condition was not configured while defining the Alarm.
- B. OCI Monitoring service can send only one notification per Alarm Definition when the alarm condition is met.
- C. Resending notifications depends on the total metric streams returned from the query.
- **D. Repeat notification was not enabled while creating the Alarm.**

Answer: D

Explanation:

For repeated notifications in OCI Monitoring:

Repeat notification was not enabled while creating the Alarm (B): The "Repeat Notification" option must be enabled in the alarm definition, specifying an interval (e.g., every 5 minutes). If disabled, only one notification is sent when the alarm fires, explaining the subscriber's issue.

Why not A, C, or D?

A: False; OCI supports repeat notifications if configured.

C: Trigger condition is mandatory for any alarm; this isn't the issue.

D: Notification frequency isn't tied to metric streams, only the repeat setting.

Repeat Notification ensures ongoing alerts.

NEW QUESTION # 45

When would you use a vantage point in Application Performance Monitoring (APM)?

- A. Java Management
- **B. Synthetic Monitoring**
- C. Distributed Tracing
- D. Application Insights

Answer: B

Explanation:

In APM, a vantage point is used in:

Synthetic Monitoring (D): Runs tests from specific locations (vantage points) to monitor web application or API availability and performance globally.

Why not A, B, or C?

Java Management (A): Unrelated to vantage points.

Distributed Tracing (B): Tracks internal request flows, not external tests.

Application Insights (C): Not a formal APM feature; vague term.

Vantage points simulate user access from different regions.

NEW QUESTION # 46

.....

Our 1Z0-1111-25 simulating exam is perfect for they come a long way on their quality. On one hand, we have engaged in this career for over ten years and have become the leader in this market. On the other hand, we never stop developing our 1Z0-1111-25 study guide. And our 1Z0-1111-25 Training Materials have the function to remember and correct your errors. If you commit any errors, Our 1Z0-1111-25 learning questions can correct your errors with accuracy rate more than 98 percent.
