## SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition, Sourcing and Procurement Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which of the following apps can you use to extend the organizational data of an already existing material /product in SAP S/4HANA Cloud Public Edition? Note: There are 2 correct answers to this question.

- **A. Manage Product Master Data**
- B. Manage Source Data Products
- **C. Change Material**
- D. Create Material

**Answer: A,C**

Explanation:

In SAP S/4HANA Cloud Public Edition, extending the organizational data of an already existing material /product can be achieved through specific apps designed for managing and modifying master data. Here's a detailed explanation of the correct answers:

\* Manage Product Master Data (A): This app allows users to manage product master data across different organizational levels, such as plants, sales organizations, and distribution channels. It is particularly useful for extending the organizational data of an existing material by adding or modifying attributes relevant to specific organizational units. This app provides a centralized interface to handle various aspects of product data.

\* Change Material (B): The "Change Material" app is used to modify existing material master records. It allows users to update or extend the organizational data for materials in different organizational contexts, such as plant-specific or purchasing-related data. This app is essential when you need to make changes to existing materials without creating new ones.

\* Create Material (C): This app is used to create new material master records rather than extending or modifying existing ones. Therefore, it is not suitable for extending the organizational data of an already existing material.

\* Manage Source Data Products (D): This app is related to managing source data for products, typically used in procurement processes to define sources of supply. It does not directly deal with extending organizational data for existing materials.

SAP S/4HANA Cloud Public Edition Documentation: Change Material App

SAP Best Practices for Sourcing and Procurement in SAP S/4HANA Cloud Public Edition These references provide comprehensive insights into the functionalities and use cases of the mentioned apps within the context of SAP S/4HANA Cloud Public Edition - Sourcing and Procurement.

### NEW QUESTION # 19

How can you define the relationship between business roles and business catalogs?

- A. A business catalog is a collection of one or more business roles.
- B. A business role restricts access to one or more business catalogs.
- C. A business catalog restricts access to one or more business roles.
- **D. A business role is a collection of one or more business catalogs.**

**Answer: D**

Explanation:

In SAP S/4HANA Cloud Public Edition, the relationship between business roles and business catalogs is defined as follows: a business role is a collection of one or more business catalogs. This structure ensures that users assigned to a business role have access to the relevant SAP Fiori apps grouped within the associated business catalogs.

\* A business role is a collection of one or more business catalogs (Option D): Business roles are designed to group business catalogs, which in turn contain collections of SAP Fiori apps. This hierarchical structure simplifies role-based access management. The SAP Role-Based Access Control Guide confirms this relationship.

\* A. A business catalog restricts access to one or more business roles: Business catalogs do not restrict access; instead, they provide access to SAP Fiori apps. Restrictions are managed through business roles.

\* B. A business catalog is a collection of one or more business roles: This is incorrect because business catalogs are collections of SAP Fiori apps, not business roles.

\* C. A business role restricts access to one or more business catalogs: Business roles grant access to business catalogs rather than restricting access.

\* SAP Role-Based Access Control Guide: Explains the relationship between business roles and business catalogs in SAP S/4HANA Cloud Public Edition. <https://help.sap.com>

\* SAP Fiori Apps Reference Library: Provides details on how business roles and catalogs are structured and used in the system.

Why Option D is Correct: Why the Other Options Are Incorrect: Key References:

### NEW QUESTION # 20

Which organizational units are categories of the business partner master data that is relevant for business partner roles Supplier and Supplier (Fin. Accounting)? Note: There are 2 correct answers to this question.

- A. Country data
- **B. Company code data**
- **C. Purchasing organization data**
- D. Personnel Sub Area data

**Answer: B,C**

### NEW QUESTION # 21

For which of the following actions can you use the SAP Fiori app Manage Purchase Orders?

- **A. Edit the fields of multiple purchase orders simultaneously**
- B. Maintain some default values of purchase orders for your user
- C. Create purchase orders for direct consumption
- D. Convert your purchase requisitions to purchase orders

**Answer: A**

Explanation:

The SAP Fiori app "Manage Purchase Orders" is used to perform various actions related to purchase orders. Among the options provided, the correct action is:

\* Edit the fields of multiple purchase orders simultaneously (Option A): The "Manage Purchase Orders" app allows users to edit multiple purchase orders at once, streamlining bulk updates and changes. This functionality is particularly useful for making mass updates to fields such as delivery dates, quantities, or payment terms. The SAP Fiori Apps Reference Library confirms this capability.

\* A. Convert your purchase requisitions to purchase orders: Converting purchase requisitions to purchase orders is handled in other apps, such as "Process Purchase Requisitions," not in "Manage Purchase Orders."

\* B. Create purchase orders for direct consumption: Creating purchase orders for direct consumption is typically done using apps like "Create Purchase Order - Advanced" or "Manage Purchase Orders," but it is not a primary function of this app.

\* SAP Fiori Apps Reference Library:Provides detailed descriptions of the functionalities available in the "Manage Purchase Orders" app.<https://fioriappslibrary.hana.ondemand.com>

**Why the Other Options Are Incorrect:**Key References:

If a customer wants to develop their own custom application and integrate it with SAP S/4HANA Cloud Public Edition, what tools would you recommend to develop the app? Note: There are 2 correct answers to this question.

- Answer: A,D**
