As we all know, office workers have very little time to prepare for examinations. It would be too painful to waste precious rest time on the subject. But if they have Managing-Cloud-Security practice materials, things will become different. Our Managing-Cloud-Security study materials not only include key core knowledge, but also allow you to use scattered time to learn, so that you can learn more easily and achieve a multiplier effect. And after you study with our Managing-Cloud-Security Exam Questions for 20 to 30 hours, you will be able to pass the Managing-Cloud-Security exam for sure.

WGU Managing-Cloud-Security Exam Syllabus Topics:

Section	Objectives
Topic 1: Cloud Security Governance	- Security policies and compliance frameworks in cloud environments • 1. Regulatory and compliance considerations (e.g., ISO, NIST concepts) • 2. Cloud shared responsibility model
Topic 2: Risk Management and Compliance	- Cloud risk assessment and mitigation • 1. Threat modeling in cloud systems • 2. Security controls and audits
Topic 3: Identity and Access Management (IAM)	- Authentication and authorization in cloud systems • 1. Role-based access control (RBAC) • 2. Multi-factor authentication (MFA) • 3. Least privilege principles

Topic 4: Cloud Security Architecture	- Secure cloud design principles 1. Network segmentation and security groups 2. Encryption at rest and in transit
Topic 5: Security Monitoring and Incident Response	- Detection and response in cloud environments 1. Logging and monitoring strategies 2. Incident response lifecycle

Selecting Training Managing-Cloud-Security Online - Get Rid Of WGU Managing Cloud Security (JY02)

The 21 century is the information century. So there are many changes in the field of the Managing-Cloud-Security exam questions. They are also transforming people's lives and the mode of operation of human society in a profound way. when you are preparing for an Managing-Cloud-Security exam, our company can provide the best electronic Managing-Cloud-Security Exam Torrent for you in this website. I strongly believe that under the guidance of our Managing-Cloud-Security test torrent, you will be able to keep out of troubles way and take everything in your stride.

WGU Managing Cloud Security (JY02) Sample Questions (Q50-Q55):

NEW QUESTION # 50

What is an appropriate countermeasure given the threat of a power outage of a cloud service provider?

- A. Web application firewalls
- B. Storage array replication
- **C. Backup generators**
- D. Database replication

Answer: C

Explanation:

Backup generators are an appropriate countermeasure for mitigating the risk of a power outage at a cloud service provider. Managing Cloud principles explain that ensuring continuous power supply is a core responsibility of the provider's physical infrastructure management.

Backup generators, along with redundant power feeds and uninterruptible power supplies, allow data centers to continue operating during power failures. This ensures availability, resilience, and continuity of cloud services.

Database replication and storage replication address data availability, while web application firewalls protect against application-layer attacks. They do not mitigate power loss. Therefore, backup generators are the correct countermeasure.

NEW QUESTION # 51

An organization is concerned that it will be unable to recover or access data if the cloud provider goes into bankruptcy and leaves the market. How is this concern addressed in a business continuity and disaster recovery plan?

- A. Use best tools to securely connect to the cloud
- B. Revise contractual and personnel obligations
- **C. Consider options for portability and interoperability**
- D. Enable multiple zones to mitigate service disruptions

Answer: C

Explanation:

This concern is addressed by considering portability and interoperability options. Managing Cloud guidance explains that organizations must plan for provider exit scenarios to avoid dependency risks.

Portability ensures data and workloads can be moved to another provider or on-premises environment, while interoperability supports compatibility across platforms. This may include standardized data formats, documented APIs, and offsite backups.

Multiple zones address outages, not provider bankruptcy. Contract revisions help legally but do not guarantee recovery. Therefore, portability and interoperability are the correct focus.

NEW QUESTION # 52

Which data retention method is used for business continuity and disaster recovery (BC/DR) backups?

- A. Data classification
- B. Monitoring and enforcement
- C. Archiving and retrieval procedures
- D. Local agent checks

Answer: C

Explanation:

Archiving and retrieval procedures are the data retention method used for business continuity and disaster recovery (BC/DR) backups. Managing Cloud principles describe BC/DR as a critical operational function that ensures data can be restored following system failures, cyber incidents, or natural disasters.

Archiving involves securely storing backup data in a manner that preserves integrity and availability over time. Retrieval procedures define how quickly and effectively data can be accessed and restored when needed.

Together, these procedures ensure that organizations can resume operations with minimal disruption.

The other options do not support BC/DR directly. Data classification categorizes data by sensitivity, local agent checks focus on endpoint health, and monitoring and enforcement apply to security oversight rather than retention. Therefore, archiving and retrieval procedures are essential for BC/DR backups.

NEW QUESTION # 53

Which testing standard is currently used to guide Service Organization Control (SOC) audits outside the United States?

- A. The Statement on Standards for Attestation Engagements (SSAE) 18
- B. The Statement on Standards for Accounting and Review Services (SSARS) 25
- C. The International Standard on Assurance Engagements (ISAE) 3402
- D. The International Standard on Review Engagements (ISRE) 2400

Answer: C

Explanation:

Outside the United States, ISAE 3402 (International Standard on Assurance Engagements 3402) is the standard used for audits equivalent to SOC reports. It ensures that service organizations demonstrate adequate internal controls over financial reporting and operational processes.

SSAE 18 is the U.S. standard governing SOC audits. ISRE 2400 and SSARS 25 focus on accounting and review services, not assurance over service organizations.

ISAE 3402 provides assurance to international customers that cloud providers or service organizations meet rigorous standards for security, availability, processing integrity, confidentiality, and privacy. This builds global trust and interoperability in compliance frameworks.

NEW QUESTION # 54

Which group should be notified for approval when a planned modification to an environment is scheduled?

- A. Event management team
- B. Executive management board
- C. Problem management team
- D. Change management board

Answer: D

Explanation:

The Change Management Board (CMB), also called the Change Advisory Board (CAB), is the formal authority responsible for reviewing, assessing, and approving planned modifications to IT environments. This group ensures that proposed changes align with business objectives, do not introduce unnecessary risks, and comply with security and regulatory requirements.

Event management teams focus on monitoring events, problem management teams handle root-cause analysis, and executive boards provide strategic direction but are not operational approval authorities. Only the CMB has the explicit role of validating technical and security implications before implementation.

By involving the CMB, organizations enforce structured governance, minimize disruptions, and establish accountability. This practice is central in ITIL and ISO/IEC 20000 standards, ensuring that operational integrity and security are preserved during change cycles.
