Get Ping Identity PAP-001 Real Questions and Save Your Valuable Time

Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional PAP-001 questions torrent provider, we are worth trusting; because we make great efforts, we do better. Here are some reasons to choose us. The PAP-001 Exam Torrent can prove your ability to let more big company to attention you. Then you have more choice to get a better job and going to suitable workplace.

Ping Identity Certified Professional - PingAccess Sample Questions (Q66-Q71):

NEW QUESTION # 66

A modified application now requires additional attributes to be passed in the headers. What needs to be modified in order to pass the additional attributes?

- A. HTTP Request Header Rule
- **B. Header Identity Mapping**
- C. Web Session Attribute Rule
- D. JWT Identity Mapping

Answer: B

Explanation:

To pass user attributes into HTTP headers for applications, PingAccess uses Identity Mappings. When attributes need to be passed specifically as headers, the administrator must update the Header Identity Mapping.

Exact Extract:

"Header identity mappings map attributes from a user's web session to HTTP headers that are then sent to the back-end application."

* Option A (HTTP Request Header Rule) is incorrect - this adds or modifies static request headers, not user attributes.

* Option B (Header Identity Mapping) is correct - this maps identity attributes into headers dynamically.

* Option C (JWT Identity Mapping) is incorrect - that's used for passing attributes as claims in JWTs.

* Option D (Web Session Attribute Rule) is incorrect - that is for access control evaluation, not propagation of attributes.

Reference: PingAccess Administration Guide - Identity Mapping (Header Identity Mapping)

NEW QUESTION # 67

Which two options can be changed in the `run.properties` file? (Choose 2 answers.)

- A. URL for heartbeat endpoint
- B. Default logs location
- C. Logging levels
- D. Operational mode for PingAccess
- E. X-Frame-Options header

Answer: C,D

Explanation:

The `run.properties` file in PingAccess is the primary configuration file that defines system-level runtime behavior. According to PingAccess documentation:

* Exact Extract:

"The `run.properties` file contains configuration properties for PingAccess, including operational mode, logging levels, admin authentication fallback, cluster settings, and system defaults." (PingAccess Administrator's Guide - `run.properties` Reference) From this, we can determine:

* C. Operational mode for PingAccess#CorrectThe property `pa.operational.mode` in `run.properties` defines whether the node operates as `STANDALONE`, `CLUSTERED_CONSOLE`, `CLUSTERED_CONSOLE_REPLICA`, or `CLUSTERED_ENGINE`. This is one of the core configurable options.

* E. Logging levels#CorrectProperties such as `log.level` and other logging configurations are explicitly defined in `run.properties`, allowing administrators to adjust the verbosity of logs (`DEBUG`, `INFO`, `WARN`, `ERROR`).

Why the others are incorrect:

* A. Default logs location#IncorrectThe log file path is not controlled via `run.properties`. It is defined in `log4j2.xml`, not `run.properties`.

* B. URL for heartbeat endpoint#IncorrectThe heartbeat endpoint (`/pa/heartbeat.ping`) is a fixed system endpoint and is not configurable in `run.properties`.

* D. X-Frame-Options header#IncorrectSecurity headers like `X-Frame-Options` are managed under application security policies or global response headers, not `run.properties`.

Reference: PingAccess Administrator's Guide - `run.properties` Reference (section describing `pa.operational.mode` and logging configuration properties).

NEW QUESTION # 68

A PingAccess API deployment requires multiple Access Token Managers to maintain compliance with customer requirements. Which feature must be set on the Token Provider configuration?

- A. Use Token Introspection Endpoint
- B. Send Audience
- C. Subject Attribute Name
- D. Client Secret

Answer: B

Explanation:

When using multiple Access Token Managers, the `Send Audience` option ensures that tokens are scoped properly and validated against the intended resource/application.

Exact Extract:

"Enable `Send Audience` in the token provider configuration to support environments with multiple Access Token Managers and enforce correct audience restrictions."

- * Option A (`Subject Attribute Name`) is unrelated - it maps user identity but not token manager selection.
- * Option B (`Send Audience`) is correct - required when multiple ATMs are in use.
- * Option C (`Use Token Introspection Endpoint`) is optional and depends on deployment, not mandatory for multiple ATMs.
- * Option D (`Client Secret`) is part of OAuth client credentials, not specific to multiple ATMs.

Reference: PingAccess Administration Guide - Access Token Management

NEW QUESTION # 69

A change is made to the configuration that prevents user access to an application. No one claims to have made the change. Which log file should the administrator use to determine who made the change?

- A. `pingaccess.log`
- B. `pingaccess_engine_audit.log`
- C. `pingaccess_agent_audit.log`
- D. `pingaccess_api_audit.log`

Answer: D

Explanation:

All administrative API calls that change PingAccess configuration are logged in `pingaccess_api_audit.log`. This allows administrators to track who made configuration changes.

Exact Extract:

"The `pingaccess_api_audit.log` file contains entries for all administrative API calls and is used to audit configuration changes."

- * Option A (`pingaccess.log`) contains runtime system messages but not detailed API audit entries.
- * Option B (`pingaccess_engine_audit.log`) is specific to engine request/response audit logging.
- * Option C (`pingaccess_agent_audit.log`) is used for PingAccess Agent traffic auditing, not administrative changes.
- * Option D (`pingaccess_api_audit.log`) is correct - it tracks admin API modifications.

Reference: PingAccess Administration Guide - Log Files

NEW QUESTION # 70

What is the purpose of the `engine.ssl.protocols` in the `run.properties` file?

- A. To configure the supported TLS versions
- B. To configure the supported HTTPS port
- C. To configure the supported ciphers
- D. To configure SSL protocols used for clustering

Answer: A

Explanation:

The property `engine.ssl.protocols` in `run.properties` specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The `engine.ssl.protocols` property configures which TLS versions are enabled for HTTPS listeners."

- * Option A (ciphers) is incorrect - cipher suites are defined separately, not in this property.
- * Option B (HTTPS port) is incorrect - the port is defined in the engine listener, not here.
- * Option C (TLS versions) is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).
- * Option D (clustering) is incorrect - clustering does not depend on this property.
