## LEED-Green-Associate valid dumps - LEED-Green-Associate exam simulator - LEED-Green-Associate study torrent

The unmatched and the most workable study guides of Exam4Free are your real destination to achieve your goal. The pathway to pass LEED-Green-Associate was not so easy and perfectly reliable as it has become now with the help of our products. Just you need to spend a few hours daily for two week and you can surely get the best insight of the syllabus and command over it. The

LEED-Green-Associate Questions and answers in the guide are meant to deliver you simplified and the most up to date information in as fewer words as possible.

## USGBC LEED Green Associate Exam Sample Questions (Q14-Q19):

### NEW QUESTION # 14

The Montreal Protocol banned the production of

- A. freon
- B. ammonia
- C. CFCs
- D. HCFCs

**Answer: C**

Explanation:

The Montreal Protocol is an international treaty that aims to protect the ozone layer by phasing out the production and consumption of ozone-depleting substances (ODS). ODS are chemicals that contain chlorine or bromine, which can destroy the ozone molecules in the stratosphere. CFCs, or chlorofluorocarbons, are a group of ODS that were widely used in refrigeration, air conditioning, aerosols, and solvents. The Montreal Protocol banned the production of CFCs in 2010<sup>12</sup>. Freon is a trade name for some CFCs and HCFCs, or hydrochlorofluorocarbons, which are also ODS but less harmful than CFCs. The Montreal Protocol also controls the production of HCFCs, which are being phased out gradually<sup>12</sup>. Ammonia is not an ODS and is not regulated by the Montreal Protocol.

The Montreal Protocol on Substances That Deplete the Ozone Layer | U.S. Department of State<sup>2</sup> Montreal Protocol - Wikipedia<sup>1</sup>

### NEW QUESTION # 15

The project team is conducting a feasibility study of a building project. The developer has pre-qualified four potential sites that are all financially viable. Within the context of LEED, which site is the most applicable?

- A. A brownfield site with access to five lines of public transportation and basic services
- B. A brownfield site with no access to metro
- C. A greenfield site with access to public transport and proximity to grocery stores
- D. A brownfield site in a national park with car access only

**Answer: A**

Explanation:

From a LEED perspective, a brownfield site with access to multiple lines of public transportation and basic services would be the most applicable. Brownfield sites are previously developed sites that may be contaminated with hazardous waste or pollution. Developing on these sites can help to clean up and revitalize the area. Access to public transportation reduces the need for private vehicle use, reducing carbon emissions and traffic congestion. ### NEW QUESTION # 16

An owner is looking to update the interior materials of the office while promoting a healthier indoor work environment using LEED strategies. During the materials specification, which of the following strategies can the owner take in order to achieve this goal?

- A. Specify high solar reflectance materials
- B. Specify low-cost materials
- C. Specify low-emitting materials
- D. Specify salvaged materials

**Answer: C**

Explanation:

Explanation

An owner who wants to update the interior materials of the office while promoting a healthier indoor work environment using LEED strategies can specify low-emitting materials as one of the strategies to achieve this goal. Low-emitting materials are materials that

have low or no emissions of volatile organic compounds (VOCs) or other pollutants into the indoor air. VOCs are organic chemicals that can evaporate or vaporize at room temperature and can adversely affect the indoor air quality (IAQ) of a building and the health, comfort, and productivity of the occupants. Some sources of VOCs in buildings are paints, coatings, adhesives, sealants, flooring, furniture, and cleaning products. Specifying low-emitting materials can reduce the exposure and risk of VOCs for the occupants and improve IAQ. References: LEED v4 Green Associate Candidate Handbook1, LEED v4 BD+C Reference Guide2

#### NEW QUESTION # 17

Which label or certification indicates reduced water consumption for appliances?

- A. GREENGUARD
- **B. ENERGY STAR**
- C. ASHRAE 90.1
- D. ISO 14001:2015

**Answer: B**

Explanation:

ENERGY STAR is a program run by the U.S. Environmental Protection Agency (EPA) and U.S. Department of Energy that promotes energy efficiency. Products that earn the ENERGY STAR label meet strict criteria for energy efficiency and often for water efficiency as well, helping consumers save money on utility bills and protect the environment through energy-efficient products and practices. Reference: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

#### NEW QUESTION # 18

Which of the following falls under the Energy and Atmosphere credit category?

- A. Heat Island Reduction
- B. Interior Lighting
- **C. Enhanced Refrigerant Management**
- D. Cooling Tower Water Use

**Answer: C**

Explanation:

The Energy and Atmosphere (EA) category addresses the energy performance, efficiency, and renewable sources of buildings. One of the credits in this category is EA Credit: Enhanced Refrigerant Management, which aims to reduce the emissions of ozone-depleting substances and greenhouse gases from refrigeration and air-conditioning equipment. Refrigerants are substances that are used to transfer heat in cooling systems.

Some refrigerants have high global warming potential (GWP) and ozone depletion potential (ODP), which means they can contribute to climate change and damage the ozone layer if they leak or are improperly disposed of. Enhanced refrigerant management involves selecting refrigerants with low GWP and ODP, minimizing refrigerant charge size, and preventing or detecting leaks.
