**Selected resources** Info

Name	Resource ID	State
DefaultVPC	vpc-09d6e4631cd49d2b3	Available

**Flow log settings**

Name - *optional*

10 minutes  
 1 minute

**Destination**  
 The destination to which to publish the flow log data.

Send to CloudWatch Logs  
 Send to an Amazon S3 bucket  
 Send to Amazon Data Firehose in the same account  
 Send to Amazon Data Firehose in a different account

An experienced AWS administrator is creating a new virtual public cloud (VPC) flow log with the settings shown in the exhibit. What is the purpose of this configuration? Response:

- A. To monitor the logs in real time
- **B. To store the logs for further analysis**
- C. To troubleshoot a log flow issue
- D. To maximize the number of logs saved

**Answer: B**

### NEW QUESTION # 71

Which Azure and AWS services can be used to collect, analyze, and visualize logs? (Choose two.)

Response:

- **A. Azure Log Analytics**
- **B. AWS CloudTrail**
- C. AWS Lambda
- D. AWS Auto Scaling

**Answer: A,B**

### NEW QUESTION # 72

You are experiencing intermittent connectivity issues in a FortiGate HA cluster deployed with Azure gateway load balancer. Traffic is being dropped when it passes through the cluster.

What is the cause of the issue?

- A. The FortiGate firewalls are using the default maximum transmission unit (MTU) size supported by Azure.
- B. The protected VMs are running an application that fragments packets.
- C. The Azure gateway load balancer is configured with an incorrect health probe port.
- D. The Azure gateway load balancer is blocking large packets, causing traffic failures.

Answer: A

Explanation:

By default, FortiGate firewalls use an MTU size larger than what Azure supports. In an HA cluster with a gateway load balancer, this mismatch causes packet drops and intermittent connectivity issues. The MTU must be adjusted to the Azure-supported value (typically 1500 or lower depending on encapsulation).

### NEW QUESTION # 73

### NEW QUESTION # 74

Your monitoring team reports performance issues with a web application hosted in Azure. You suspect that the bottleneck might be due to unexpected inbound traffic spikes. Which method should you use to identify and analyze the traffic pattern?

- A. Use Azure Traffic Manager to visualize all traffic to the application.
- B. Enable NSG Flow Logs and analyze logs with Azure Monitor.
- C. Enable Azure DDoS protection to prevent inbound traffic spikes.
- D. Deploy Azure Firewall to log traffic by IP address.

Answer: B

Explanation:

To identify and analyze inbound traffic patterns, you should enable NSG Flow Logs and analyze them with Azure Monitor. This provides detailed insights into traffic flows, including source/destination IPs, ports, and volume, which helps detect spikes or unusual traffic behavior affecting the web application.
