New Plat-Dev-210 Test Objectives & Pass4sure Plat-Dev-210 Study Materials

ActualTestsQuiz Plat-Dev-210 desktop and web-based practice exams are distinguished by their excellent features. The Plat-Dev-210 web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop Salesforce Plat-Dev-210 Practice Test software. You won't require a live internet connection to use the desktop Salesforce exam simulation software once you've verified the product's license.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Omniscripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 2	<ul style="list-style-type: none">• Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
Topic 3	<ul style="list-style-type: none">• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

Salesforce Certified Omnistudio Developer Sample Questions (Q21-Q26):

NEW QUESTION # 21

A developer needs to transform contact data into a JSON array.

Given the input JSON shown above, what are two ways a developer could configure a DATA Raptor transform to achieve the expected Output JSON? Choose 2 answers

- A. Set the Input JSON path as List(Contact) and the Output JSON Path as Contact.
- **B. Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab.**
- **C. Set the Input JSON Path as Contact the out JSON Path as Contact and the output Data type as List.**
- D. Set the input JSON Path as Contact and the OutPut JSON Path as List (Contact)

Answer: B,C

Explanation:

A DataRaptor Transform can be used to transform data from one format to another, such as JSON, XML, or CSV. The developer can specify the input and output paths for each field in the Transform tab. The developer can also use formulas to manipulate data in the Formula tab1. To transform contact data into a JSON array, the developer can use either of these methods:

- * Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab. This will create a list of contact objects from the input JSON and output it as a JSON array.
- * Set the Input JSON Path as Contact, the Output JSON Path as Contact, and the Output Data Type as List. This will output each contact object as an element of a JSON array.

NEW QUESTION # 22

Which two of these options can a developer use to retrieve data from a Salesforce object?

Choose 2 answers

- A. Data Mapper Post Action
- B. Data Mapper Load Action
- **C. Lookup Input Element**
- **D. Data Mapper Extract Action**

Answer: C,D

Explanation:

To retrieve (read) data from Salesforce objects:

* A. Data Mapper Extract Action - Correct. A DataRaptor Extract is specifically used to retrieve data from Salesforce, based on input parameters or context.

* C. Lookup Input Element - Correct. This is used within OmniScripts to look up a record by matching input data, essentially performing a read operation.

Incorrect Options:

* B. DataRaptor Post is not a valid DataRaptor type.

* D. DataRaptor Load Action is used for writing/updating data, not retrieving it.

Salesforce OmniStudio Guide # DataRaptor Types and Lookup Input Element Usage

NEW QUESTION # 23

A developer creates an Integration Procedure with a Set values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, the developer enters the AccountId correctly and executes the preview.

The developer sees the data extracted by the DataRaptor in the Debug Log, but the response is empty.

What is the likely cause of this issue?

- A. A Response Action was not added to the Integration Procedure.
- B. The Response cannot be previewed directly.
- C. The AccountId used for the preview is invalid.
- **D. The DataRaptor Action did not have the Add Response To Response JSON property set to true.**

Answer: D

Explanation:

The Add Response To Response JSON property on the DataRaptor Action indicates that the output of the DataRaptor should be added to the response JSON of the Integration Procedure. If this property is not set to true, the response will be empty even if the DataRaptor extracts data successfully.

NEW QUESTION # 24

A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the contact for the customer account. The FlexCard contains 10 fields and 5 actions.

During testing, several fields display with the correct data, but one of the fields shows only the label.

What could cause this?

- A. The fields have exceeded the maximum number allowed on the card.
- B. There are no test parameters configured.
- **C. The field is null on the Salesforce record.**
- D. {recordId} is misspelled in the Data Source Input Map.

Answer: C

Explanation:

According to the FlexCard Designer Overview page, another possible cause of a field showing only the label is that "the field is null on the Salesforce record".

NEW QUESTION # 25

What OmniStudio tool pre-populates the data in a PDF used by an OmniScript?

- **A. A DataRaptor Transform**
- B. A DataRaptor Extract
- C. A SOQL Query
- D. A DataRaptor Load

Answer: A

Explanation:

According to the DataRaptor Transform Overview page, a DataRaptor Transform can be used to "pre-populate data in PDFs used
