Get ServiceNow CIS-PA Practice Test For Quick Preparation [2026]

As the leader in this career, we always adhere to the principle of “mutual development and benefit”, and we believe our CIS-PA practice materials can give you a timely and effective helping hand whenever you need in the process of learning. With our CIS-PA exam questions for 20 to 30 hours, you will find that you can pass the exam with confidence. Tens of thousands of our customers have tested that our pass rate of the CIS-PA study braindumps is high as 98% to 100%, which is unmatched on the market!

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 2	<ul style="list-style-type: none">• Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.
Topic 3	<ul style="list-style-type: none">• Configure Indicators and Indicator Sources: This domain addresses creating and configuring indicators (performance metrics), including source conditions, fact tables, indicator types, properties, and aggregation scripts.
Topic 4	<ul style="list-style-type: none">• Perform Diagnostics and Troubleshooting: This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q25-Q30):

NEW QUESTION # 25

How can a Breakdown be applied to multiple Indicators based on different Facts tables?

- A. Create a mapping script to define the relationship between the indicator facts tables and the breakdown source
- B. Configure the indicators to use the same indicator source
- C. Create a separate breakdown mapping for each indicator facts table
- D. Create a separate breakdown record for each indicator facts table

Answer: C

Explanation:

A single Breakdown can be reused across multiple indicators—even when those indicators are based on different facts tables—by creating a separate Breakdown Mapping for each indicator facts table.

The Breakdown defines what is being analyzed, while the Breakdown Mapping defines how the indicator facts relate to the breakdown source. Because different facts tables may store data differently, each requires its own mapping configuration. A scripted mapping is only required when no direct relationship exists, not simply because facts tables differ. ServiceNow documentation clearly states that reuse across facts tables is achieved through multiple mappings, making option D the correct answer.

NEW QUESTION # 26

What is a Breakdown?

- A. It is the ability to group or filter indicator scores
- B. It is the ability to group or filter report data
- C. It is a choice list of possible attribute values
- D. It is a source table for categorization data

Answer: A

Explanation:

In Platform Analytics, a Breakdown is used to group or filter indicator scores based on specific attributes, such as priority, category, assignment group, or age ranges. Breakdowns allow users to analyze how different segments contribute to overall performance and to compare trends across those segments over time.

Breakdowns operate on indicator scores, not on raw report data. While reports can also be grouped or filtered, that functionality is separate from Performance Analytics. A Breakdown does not define the source table itself (that is the role of the Breakdown Source), nor is it merely a choice list. ServiceNow documentation clearly defines Breakdowns as a core analytics concept used to slice indicator data for deeper performance insight, making option D the correct answer.

NEW QUESTION # 27

Which of the following statements best describes an Automated Indicator?

- A. A series of measurements that describe a process over a period of time
- B. A process summary taken at a single point in time
- C. A subcategorization of an indicator that provides more granular views of scores
- D. A scheduled job that collects data

Answer: A

Explanation:

An Automated Indicator in Platform Analytics is defined as a series of measurements collected over time that represent the performance of a process. These measurements are stored as time series data, allowing organizations to analyze trends, patterns, and historical performance. Automated indicators rely on indicator sources and scheduled data collection jobs to collect data at defined intervals, such as daily or hourly.

Option B describes a snapshot report, which represents data at a single point in time and does not support trending. Option C refers to breakdowns, which categorize indicator scores for deeper analysis but do not define the indicator itself. Option D describes the data collection job, which is a mechanism used by automated indicators but not the indicator definition. ServiceNow documentation explicitly states that indicators represent performance over time, making option A the correct and most complete description of an Automated Indicator.

NEW QUESTION # 28

What determines the color of the score in a Score widget?

- A. Widget settings
- B. Field styles on the field used to calculate the Indicator
- C. Chart color defined for the base table
- D. Relationship to the target and the Direction setting of the Indicator

Answer: D

Explanation:

In ServiceNow Platform Analytics, the color of the score displayed in a Score widget is determined by the Indicator's relationship to its target in combination with the Direction setting (Maximize or Minimize) of the Indicator. This behavior is part of the KPI evaluation logic and is consistent across dashboards and KPI Details.

When an indicator has a defined target, Platform Analytics compares the current score against that target.

Based on whether the indicator is configured to maximize (higher is better) or minimize (lower is better), the platform automatically assigns a visual status—such as green (on track), yellow (warning), or red (off track).

This status directly controls the color of the score values shown in the widget.

Chart colors, field styles, or widget-specific settings do not influence the score color. Those options may affect line charts or visual styling, but not KPI status coloring. ServiceNow documentation clearly states that KPI status and score coloring are driven by target evaluation logic, making option A the correct and verified answer.

NEW QUESTION # 29

Where are Next Experience Dashboards and Data Visualizations created?

- A. In Analytics Administration
- B. In the Analytics Hub
- C. In Reports Administration
- D. In the Analytics Center

Answer: D

Explanation:

Analytics Center is the workspace used to create and manage Next Experience Dashboards and Data Visualizations. It provides a unified interface for building modern, interactive analytics experiences, including metric visualizations, time series, breakdown views, and dashboards.

Analytics Hub is primarily used for viewing and exploring existing analytics, not creating them. Reports Administration and Analytics Administration serve different purposes and do not support Next Experience dashboard creation. ServiceNow documentation explicitly identifies Analytics Center as the creation and management environment for Next Experience analytics content, making option D the correct answer.

NEW QUESTION # 30

.....

How to let our customers know the applicability of the virtual products like CIS-PA exam software before buying? We provide the free demo of CIS-PA exam software so that you can directly enter our Itcertkey to free download the demo to check. If you have any question about it, you can directly contact with our online service or email us. When you decide to choose our product, you have already found the shortcut to success in CIS-PA Exam Certification.
