

Latest C_S4CPB Demo | C_S4CPB Practice Tests

We promise that using C_S4CPB certification training materials of ActualtestPDF, you will pass C_S4CPB exam in your first try. If not or any problems in C_S4CPB certification training materials, we will refund fully. What's more, after you purchase our C_S4CPB Certification Training materials, ActualtestPDF will offer update service in one year.

When you follow with our C_S4CPB exam questions to prepare for your coming exam, you will deeply touched by the high-quality and high-efficiency. Carefully devised by the professionals who have an extensive research of the C_S4CPB exam and its requirements, our C_S4CPB study braindumps are a real feast for all the candidates. And if you want to have an experience with our C_S4CPB learning guide, you can free download the demos on our website.

Authorized Latest C_S4CPB Demo & Leader in Qualification Exams & High-quality C_S4CPB: SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602)

C_S4CPB practice exam takers can even access the results of previous attempts which helps them in knowing and overcoming their mistakes before appearing in the C_S4CPB final test. There are thousands of students that bought ActualtestPDF's C_S4CPB Practice Exam and got success on their initial tries. We guarantee that if you take our provided SAP C_S4CPB exam dumps you will crack the C_S4CPB Exam in a single try.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public

Edition (C_S4CPB_2602) Sample Questions (Q16-Q21):

NEW QUESTION # 16

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Migrate the bank data listed below.

Table 1: Bank 1

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to migrate two bank master records into SAP S/4HANA Cloud Public Edition using the Migrate Data Using Staging Tables approach.

This task is performed inside the migration project created earlier:

Migration Project Name: Bank Data #####

Migration Object: Bank

The bank master data must be entered exactly as provided in the task tables.

Business Scenario Explanation

In this scenario, you are responsible for loading a small number of bank records into the system. Because there are only two banks to migrate, the selected migration method is:

Migrate Data Using Staging Tables

This method requires you to:

open the existing migration project,

download the Bank templates,

populate the required CSV file with the bank data,

upload the files,

validate the data,

transfer the data to staging tables,

complete any required mapping tasks,

migrate the bank instances,

verify the migrated banks in the target app.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown in the task.

Keep names, spaces, and numbers exactly correct.

During your execution, mappings may be required for:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

If regional text values like Pennsylvania or Georgia are rejected, mapping may be needed to:

PA

GA

Example

If the suffix is 000013, the values become:

Bank 1

Bank Country/Region = US

Bank Key = A000013
Bank Name = Bank of A000013
Street = West Chester Pike
House Number = 3999
City = Newtown Square
Postal Code = 19073
Country/Region = US
Language = EN
Location = Pennsylvania

Bank 2

Bank Country/Region = US
Bank Key = Z000013
Bank Name = Bank of Z000013
Street = Lenox Road
House Number = 3580
City = Atlanta
Postal Code = 30326
Country/Region = US
Language = EN
Location = Georgia

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit where the project and Bank migration object are maintained.

Step 2: Open the migration project

In the migration projects list:

Search for your project:

Bank Data #####

Open the project.

Example

If your suffix is 000013, open:

Bank Data 000013

Explanation:

This is the migration project created in the previous task and it contains the migration object Bank.

Step 3: Open the Bank migration object

Inside the migration project:

Locate the migration object:

Bank

Open it.

Explanation:

The Bank migration object is where the templates, uploads, mapping tasks, and migration instances are handled.

Step 4: Download the template files

On the Bank migration object screen:

Click:

Download Template

This provides the CSV template files needed for migration.

Explanation:

For the Bank migration object, the main files typically include:

S_BNKA#FreeText_Mandatory.csv

S_SCRIPT_ADRC#FreeText.csv

The mandatory file contains the bank master structure; the second file is optional for international address versions.

Step 5: Populate the mandatory Bank CSV file

Open the mandatory CSV file:

S_BNKA#FreeText_Mandatory.csv

Enter the two bank records exactly as required from the task tables.

Explanation:

This file must contain the bank master data that will be loaded into the staging tables.

The data must match the required values exactly.

Step 6: Use the correct values in the Bank CSV

Populate the mandatory file with the two records.

Bank 1

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

Street = West Chester Pike

House Number = 3999

City = Newtown Square

Postal Code = 19073

Country/Region = US

Language = EN

Location = Pennsylvania

Bank 2

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

Street = Lenox Road

House Number = 3580

City = Atlanta

Postal Code = 30326

Country/Region = US

Language = EN

Location = Georgia

Explanation:

These values create two bank master records, one beginning with key A##### and the other with key Z#####.

Step 7: Keep the optional international address file empty if not needed For the file:

S_SCRIPT_ADRC#FreeText.csv

leave it with header only if no separate international address version data is required.

Explanation:

During your execution, the optional file was not required and the Bank migration still proceeded because only the mandatory Bank Master structure had to be populated.

Step 8: Open Upload Files

In the Bank migration object:

Go to:

Upload Files

Explanation:

This is where the CSV folder is created and the files are uploaded to the migration cockpit.

Step 9: Create a CSV Folder

Click:

Create CSV Folder

Explanation:

When using CSV with staging tables, SAP groups the upload into a CSV folder structure.

Step 10: Upload the CSV files

Upload:

S_BNKA#FreeText_Mandatory.csv

S_SCRIPT_ADRC#FreeText.csv (optional / empty if not used)

Explanation:

The mandatory file is required.

The optional file may remain empty or not provided depending on the migration object's structure.

Step 11: Validate the data

After upload:

Click:

Validate Data

Explanation:

This checks:
file readability,
required columns,
correct structure,
duplicate keys,
and data consistency.

Step 12: Correct any file or format errors if needed

During execution, common issues included:

wrong file mapping,
UTF-8 / CSV reading problems,
missing mandatory fields,
duplicate key values,
region value mismatches.

Explanation:

You must resolve validation errors before continuing to staging tables.

Examples from your run:

duplicate key values had to be corrected,
file structure mapping had to be adjusted,
CSV encoding had to be corrected.

Step 13: Transfer data to staging tables

After validation is successful, click:

Transfer Data to Staging Tables

Explanation:

This moves the validated CSV data into SAP's staging tables so the Bank migration object can create migration instances.

Step 14: Go to Mapping Tasks if required

If the system shows mapping tasks, open:

Mapping Tasks

Explanation:

For your run, the following mappings had to be confirmed:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

Step 15: Maintain mapping values

If mappings appear, confirm or maintain them as follows:

Country/Region Key

source US → target US

Language Key (ISO)

source EN → target EN

Regional Code

If text values are shown:

source Pennsylvania → target PA

source Georgia → target GA

Bank Key

Confirm the system-generated source values to the correct target values for:

A#####

Z#####

Explanation:

These mappings are required when the migration object needs target-system value confirmation before posting the records.

Step 16: Confirm the mapping tasks

After maintaining the mappings:

Click:

Confirm

Explanation:

All mapping task statuses should change to Confirmed before running migration again.

Step 17: Open the Bank instances

Return to the Bank migration object and open:

Instances

Explanation:

This screen shows the individual bank records created from the staging-table data.

Step 18: Select the bank instances

Select both bank records.

Expected rows:

US / A#####

US / Z#####

Explanation:

Both bank records must be selected so they can be migrated into the target system.

Step 19: Click Migrate

Click:

Migrate

Explanation:

This starts the actual creation of bank master records in the target SAP S/4HANA Cloud system.

Step 20: Resolve authorization issue if it appears

During your execution, migration initially failed with:

You are not authorized to create bank data for country/region US

The fix was to assign the additional business role:

Master Data Specialist - Bank Data

SAP_BR_MD_SPECIALIST_BNK

Explanation:

The migration cockpit role alone is not always enough.

Bank creation also requires bank master data authorization.

Step 21: Refresh and check migration status

After migration:

Refresh the screen.

Check the status of both bank instances.

Expected final result:

Success

Success

Explanation:

Both bank rows must finish successfully for the task to be considered complete.

Step 22: Verify in "Manage Banks - Master Data"

Open:

Manage Banks - Master Data

Search for:

US / A#####

US / Z#####

Explanation:

This is the final business verification step that proves the bank master records were created successfully in the system.

Expected Result

After this task is completed successfully:

both bank records are loaded through staging tables,

all mapping tasks are confirmed,

both migration instances complete successfully,

the two banks are visible in Manage Banks - Master Data.

NEW QUESTION # 17

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication System with the information listed below and save.

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a Communication System for the integration scenario Bank Integration with File Interface (1EG).

This communication system will later be used in the communication arrangement and will reference the communication user created in the previous task.

Business Scenario Explanation

In this scenario, you are setting up:

Bank Integration with File Interface (1EG)

In SAP S/4HANA Cloud, the technical setup typically requires:

a Communication User

a Communication System

a Communication Arrangement

In Task 13, you created the communication user.

In Task 14, you now create the communication system and link that previously created communication user for inbound communication.

The communication system represents the external or technical integration partner definition used in the scenario.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change capitalization, underscores, or spacing.

The communication user assigned in this task must be the one created in the previous step:

1EG_COMM_USER_#####

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

System ID = 1EG_SYSTEM_000013

System Name = Bank Integration with File Interface

Host Name = DUMMY

Inbound Communication User = 1EG_COMM_USER_000013

Step 1: Open the app "Communication Systems"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Systems

Open the app.

Explanation:

This app is used to create and maintain technical communication systems for integration scenarios.

Because the task explicitly asks to create a Communication System, this is the correct app.

Step 2: Start creating a new Communication System

Inside the Communication Systems app:

Click:

New

Explanation:

This starts the creation of a new communication system record.

Step 3: Enter the System ID

In the communication system creation screen, enter:

System ID = 1EG_SYSTEM_#####

Example

If your suffix is 000013, enter:

1EG_SYSTEM_000013

Explanation:

This is the technical ID of the communication system.

It must exactly match the task requirement.

Step 4: Enter the System Name

In the System Name field, enter exactly:

Bank Integration with File Interface

Explanation:

This is the descriptive name of the communication system and must be entered exactly as provided.

Step 5: Enter the Host Name

In the Host Name field, enter exactly:

DUMMY

Explanation:

For this simulation, the host is not a real productive endpoint.

The task explicitly requires the placeholder value DUMMY.

Step 6: Maintain the inbound communication user

Locate the section for:

Users for Inbound Communication

Then:

Click Add or select the entry field/value help

Choose the communication user created in the previous task:

1EG_COMM_USER_#####

Example

If your suffix is 000013, select:

1EG_COMM_USER_000013

Explanation:

This is a critical link between the communication user and the communication system.

Without assigning the previously created communication user, the communication system setup is incomplete.

Step 7: Verify the inbound user assignment

After adding the inbound communication user, confirm that the selected user is:

1EG_COMM_USER_#####

Explanation:

This confirms that the system will use the correct technical user for inbound communication in the later communication arrangement.

Step 8: Review all entered values

Before saving, check the following:

System ID = 1EG_SYSTEM_#####

System Name = Bank Integration with File Interface

Host Name = DUMMY

Users for Inbound Communication = 1EG_COMM_USER_#####

Explanation:

This review helps avoid validation issues caused by incorrect naming, missing underscores, or selecting the wrong communication user.

Step 9: Save the Communication System

Click:

Save

Explanation:

This finalizes the creation of the communication system.

Without saving, the communication system will not exist for the next task.

Step 10: Verify the saved Communication System

After saving, confirm that the communication system exists and displays the correct values:

1EG_SYSTEM_#####

Bank Integration with File Interface

Host = DUMMY

inbound user = 1EG_COMM_USER_#####

Explanation:

This confirms the system is successfully created and ready for the communication arrangement setup in the next step.

Expected Result

After this task is completed successfully:

the communication system exists,

the system ID matches the required naming pattern,

the system name is correct,

the host name is DUMMY,

the previously created communication user is assigned for inbound communication, the system is saved successfully.

NEW QUESTION # 18

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the Launchpad Space to your custom business role. Edit the Launchpad Page to add the applications listed below as tiles (standard "preferred" square tile) with the Section Title: Self-Services.

Manage My Timesheet

Concur Travel Expense

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to complete the launchpad setup for the custom all-employee role by:

assigning the custom Launchpad Space to the business role,

editing the Launchpad Page,

creating a section titled Self-Services,

adding the required applications as standard preferred square tiles:

Manage My Timesheet

Concur Travel Expense

Business Scenario Explanation

In the earlier tasks, you created:

a custom all-employee business role,

the required business catalog assignments,

a custom launchpad space and page.

This task completes that setup by adding the actual application tiles that end users will see on the launchpad.

The goal is to make it easy for employees to find the relevant self-service applications without searching manually.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values listed in the task.

The section title must be exactly:

Self-Services

The two tiles must be:

Manage My Timesheet

Concur Travel Expense

Save after editing the page.

Prerequisites

Before doing this task, the following should already exist:

custom business role:

Z_EMPLOYEES_ALL_#####

assigned business catalogs:

SAP_HCM_BC_EMP_PC

SAP_CON_BC_CTE_ESS_PC

custom launchpad space and page created for the role

page title and description:

General

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This is the app where the custom all-employee role is maintained. The launchpad space assignment and page navigation are controlled from here.

Step 2: Open the custom all-employee business role

In Maintain Business Roles:

Search for your custom business role:

Z_EMPLOYEES_ALL_#####

Open the role.

Example

If your suffix is 000013, the role is:

Z_EMPLOYEES_ALL_000013

Explanation:

You must work in the custom all-employee role because the launchpad space and page belong to this role.

Step 3: Open the Launchpad Spaces tab

Inside the role:

Click:

Launchpad Spaces

Explanation:

This tab shows which launchpad space is assigned to the role.

Step 4: Verify the Launchpad Space is assigned

Check that the assigned space exists.

In your execution, the assigned space followed this pattern:

Z_ALL_EMP_#####

Explanation:

The task says to assign the launchpad space to the custom business role.

If the space already appears in the assigned list, then this part is already complete.

If the space is not listed:

Click Add

Create or assign the required custom space

Save the role

Step 5: Open the assigned Launchpad Space

In the assigned launchpad spaces list:

Click the arrow > at the far right of the space row.

Explanation:

This opens Space Details, where the page linked to the space can be accessed.

Step 6: Open the Pages tab

In Space Details:

Click:

Pages

Explanation:

A space can contain one or more pages.

This task requires you to edit the page content.

Step 7: Open the Launchpad Page

In the Pages list:

Open the page row by clicking the arrow > at the far right.

In your run, the page followed this pattern:

Z_ALL_EMP_#####

Explanation:

This opens Page Details, where the page content can be edited.

Step 8: Open Page Content

Inside Page Details:

Click the tab:

Page Content

Explanation:

This is the area where sections and application tiles are maintained.

Step 9: Click Edit

On the Page Content screen:

Click Edit

Explanation:

The page must be in edit mode before you can create sections or add app tiles.

Step 10: Enter the section title

In the section title field, enter exactly:

Self-Services

Explanation:

This creates the section in which the required employee self-service app tiles will be placed.

The title must match the task exactly.

Step 11: Add the tile "Concur Travel Expense"

On the right side of the page content screen, in the list of apps derived from the assigned catalogs:

Find:

Concur Travel Expense

Click:

Add

Explanation:

This adds the Concur employee self-service app tile into the Self-Services section.

Step 12: Add the tile "Manage My Timesheet"

Still on the right side app list:

Find:

Manage My Timesheet

Click:

Add

Explanation:

This adds the timesheet app tile into the same Self-Services section.

Step 13: Verify both tiles are visible in the section

After adding both apps, confirm that the page content now shows:

Concur Travel Expense

Manage My Timesheet

under the section:

Self-Services

Explanation:

This confirms the tiles were placed correctly on the page.

Step 14: Save the page

Click:

Save

Explanation:

This finalizes the page changes.

If you do not save, the tiles and section will not be retained.

Step 15: Verify the role is assigned to your business user

To verify the page and tiles from the home screen, make sure the custom all-employee role is assigned to your own business user.

Open:

Maintain Business Users

Then:

Open your own user

Open Assigned Business Roles

Confirm the role is assigned:

Z_EMPLOYEES_ALL_#####

Save if needed

Explanation:

Without role assignment, the launchpad space and page may not appear on the homepage for your user.

Step 16: Refresh the homepage

Go back to Home.

Then:

Refresh the browser or reload the session

Open the page/tab:

General

Explanation:

This ensures the launchpad updates and shows the newly added content.

Step 17: Verify the result on the homepage

On the General page, verify that you can see:

section title:

Self-Services

tile:

Concur Travel Expense

tile:

Manage My Timesheet

Explanation:

This is the final proof that the task was completed successfully.

Expected Result

After this task is completed successfully:

the custom launchpad space is assigned to the business role,

the page contains a section named Self-Services,

the page shows the tiles:

Concur Travel Expense

Manage My Timesheet

the tiles are visible on the launchpad homepage under the General page.

NEW QUESTION # 19

SIMULATION

Business Scenario You are working on an implementation project and need to create a test user in the system for demonstrating the professional services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the Project Manager - Professional Services (BR_PROJECT_MANAGER_PROF) business role to the new user and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the Project Manager - Professional Services business role to the newly created test user so that the user can perform the professional-services processes required during the Fit-to-Standard workshop.

The required business role is:

Business Role ID: BR_PROJECT_MANAGER_PROF

Business Role Description: Project Manager - Professional Services

Business Scenario Explanation

In the previous task, a new test user was created for demonstrating professional services processes.

That new user now needs the correct project-manager authorization.

Without this business role, the test user will not have access to the project-manager apps, pages, and processes needed for the workshop demonstration.

This task connects the newly created user to the standard professional-services project manager role.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values as required.

The business role ID must be:

BR_PROJECT_MANAGER_PROF

Do not use a similar role or partial match.

Save at the end, otherwise the assignment remains incomplete.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Use the app search.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to maintain business users and assign business roles.

Since the new user was created in the previous task, this is the correct app to assign the new role.

Step 2: Search for the newly created Project Manager test user

In Maintain Business Users:

In the filter/search area, enter the user name of the new test user.

The required user name format is:

PM#####

Example

If your group number suffix is 0000457, then search for:

PM0000457

Click Go.

Explanation:

You must open the newly created project manager test user, not your own user.

The role assignment in this task belongs to the imported test user created in Task 4.

Step 3: Open the new business user record

From the search results:

Click the user entry with:

User Name = PM#####

Open the detail page.

Explanation:

This opens the worker/business user record where the Project Manager role will be assigned.

Step 4: Verify that you are on the correct user

Before editing, confirm the business user details are correct.

Typical expected values are:

User Name = PM#####

First Name = Project

Last Name = Manager #####

E-Mail = PM#####@dummy.sap.com

Explanation:

This check is important because assigning the role to the wrong user would cause the simulation validation to fail.

Step 5: Switch to Edit mode

On the business user detail page:

Click Edit

Explanation:

Edit mode is required so the role list can be changed.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click the tab:

Assigned Business Roles

Explanation:

This tab shows all roles currently assigned to the new test user and is the correct place to add the project manager role.

Step 7: Click Add

In the Assigned Business Roles section:

Click Add

The system opens the popup:

Add Business Roles

Explanation:

This popup is used to search and add standard SAP-delivered business roles to the user.

Step 8: Search for the Project Manager role

In the Add Business Roles popup:

In the filter field for business role ID, enter:

BR_PROJECT_MANAGER_PROF

Click Go

Select:

Project Manager - Professional Services

Business Role ID: BR_PROJECT_MANAGER_PROF

Explanation:

This is the exact standard business role required by the task.

It provides the professional-services project manager access for the test user.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

At this point, the role is added to the user in draft mode, but the change is not yet final until saved.

Step 10: Save the business user

Back on the user detail page:

Click Save

Explanation:

This is the final required step.

If you do not save, the role assignment will not be stored and the task will not be completed successfully.

Step 11: Verify the assignment

After saving, confirm that the user now has the role:

Project Manager - Professional Services

BR_PROJECT_MANAGER_PROF

Explanation:

This confirms that the new test user is now properly prepared for later professional-services process demonstrations.

Expected Result

After the task is completed:

the new test user PM##### exists,

the role BR_PROJECT_MANAGER_PROF is assigned,

the user is saved successfully,

the user can later be used as a professional-services project manager in the workshop scenario.

NEW QUESTION # 20

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new migration project with the information listed below.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new migration project for the bank data migration scenario in SAP S/4HANA Cloud Public Edition.

The migration method for this scenario is:

Migrate Data Using Staging Tables

The migration project must be created with the exact values provided in the task.

Business Scenario Explanation

In this scenario, you are responsible for migrating bank master data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the selected migration approach is:

Migrate Data Using Staging Tables

Before any files can be uploaded or any bank data can be validated and migrated, a migration project must first be created. This project acts as the main container for:

the migration object,

the staging-table upload,

validation,

mapping,

transfer to staging tables,
and the final migration execution.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

The migration project must be created using:

Migrate Data Using Staging Tables

The migration object must be:

Bank

Save or create the project only after confirming the values are correct.

Required Values

Use the following values exactly as shown in the task image.

Parameter

Data

Name

Bank Data #####

Migration object

Bank

Example

If your suffix is 000013, then the values become:

Name = Bank Data 000013

Migration object = Bank

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit used to create migration projects and load master data and transactional data into the system.

Because the task asks you to create a new migration project, this is the correct starting point.

Step 2: Start creating a new migration project

Inside the migration app:

Click:

Create

When the dropdown appears, select:

Migrate Data Using Staging Tables

Explanation:

This is very important because the business scenario explicitly says that the chosen migration method is Migrate Data Using Staging Tables.

Do not choose:

Migrate Data Directly from SAP System

That would be the wrong migration approach for this task.

Step 3: Enter the migration project name

In the project creation screen, enter:

Name = Bank Data #####

Example

If your suffix is 000013, enter:

Bank Data 000013

Explanation:

This is the name of the migration project and must exactly match the task requirement.

Step 4: Keep the staging-table migration approach

On the project creation screen, confirm the migration approach is:

Migrate Data Using Staging Tables

Explanation:

This ensures the migration project is created with the correct loading approach for later CSV/staging-table processing.

Step 5: Keep the local database connection

When the system asks for database connection, leave the default:

Local SAP S/4HANA Database Schema

Explanation:

In your execution, the local schema was used for the migration project.

This is the expected option for the training scenario.

Step 6: Continue to Migration Objects

Click:

Step 2

or continue to the second step of project creation.

Explanation:

This moves from the general project header information to the migration object selection.

Step 7: Search for the migration object

In the Migration Objects section:

Search for:

Bank

Explanation:

The task explicitly requires the migration object:

Bank

So only that object should be selected.

Step 8: Select the migration object "Bank"

When the object appears:

Select:

Bank

Make sure it appears in the Selected Migration Objects area.

Explanation:

This step links the project specifically to the Bank migration object.

Without selecting the migration object, the migration project would be incomplete.

Step 9: Create the migration project

After confirming:

project name,

migration approach,

database connection,

migration object = Bank,

click:

Create

or the final confirmation button provided by the system

Explanation:

This finalizes the creation of the migration project.

Step 10: Verify the created migration project

After creation, verify that the new project shows:

Project Name = Bank Data #####

Migration Object = Bank

Explanation:

This confirms that the project has been created successfully and is ready for template download, CSV preparation, validation, staging-table transfer, and migration execution.

Expected Result

After this task is completed successfully:

a new migration project exists,

the project name matches the required naming pattern,

the migration approach is staging tables,

the migration object is Bank,

the project is ready for the next migration steps.

NEW QUESTION # 21

.....

The C_S4CPB exam bootcamp is quite necessary for the passing of the exam. Our C_S4CPB exam bootcamp have the knowledge point as well as the answers. It will improve your sufficiency, and save your time. Besides, we have the top-ranking information safety protection system, and your information, such as name, email address will be very safe if you buy the C_S4CPB bootcamp

from us. Once you finished the trade our system will conceal your information, and if order is completely finished, we will clean away your information, so you can buy our C_S4CPB with ease.

C_S4CPB Practice Tests: https://www.actualtestpdf.com/SAP/C_S4CPB-practice-exam-dumps.html

Our accurate C_S4CPB Dumps collection has three different formats, SAP Latest C_S4CPB Demo Especially of those expensive materials that cost a fortune while help you a little, SAP Latest C_S4CPB Demo It is fast and convenient, Getting ready for SAP C_S4CPB exam, do you have confidence to sail through the certification exam, After passing the SAP C_S4CPB exam you can gain more career opportunities and feel confident to pursue a rewarding career in your professional life.

All these SAP C_S4CPB PDF Dumps are verified and recommended by qualified SAP C_S4CPB Exam trainers, We consider here a seven-step methodology that details the strategic sourcing process.

Free PDF Updated SAP - Latest C_S4CPB Demo

Our accurate C_S4CPB Dumps collection has three different formats, Especially of those expensive materials that cost a fortune while help you a little, It is fast and convenient!

Getting ready for SAP C_S4CPB exam, do you have confidence to sail through the certification exam, After passing the SAP C_S4CPB exam you can gain more career opportunities and feel confident to pursue a rewarding career in your professional life.
