

Associate-Cloud-Engineer Real Exam Questions & Visual Associate-Cloud-Engineer Cert Exam

What's more, part of that Dumpkiller Associate-Cloud-Engineer dumps now are free: <https://drive.google.com/open?id=1NPd7Y0wSxMwGeNF1kGWXb7T4Y7IRqurs>

The education level of the country has been continuously improved. At present, there are more and more people receiving higher education, and even many college graduates still choose to continue studying in school. Getting the test Associate-Cloud-Engineer certification maybe they need to achieve the goal of the learning process, have been working for the workers, have more qualifications can they provide wider space for development. The Associate-Cloud-Engineer Actual Exam guide can provide them with efficient and convenient learning platform so that they can get the certification as soon as possible in the shortest possible time. A high degree may be a sign of competence, getting the test Associate-Cloud-Engineer certification is also a good choice. When we get enough certificates, we have more options to create a better future.

To earn the Google Associate Cloud Engineer certification, candidates must pass a two-hour exam that consists of multiple-choice and multiple-select questions. Associate-Cloud-Engineer Exam also includes performance-based scenarios that test the candidate's ability to solve real-world problems using GCP tools and services. Associate-Cloud-Engineer exam fee is \$125 USD, and the certification is valid for two years. By earning this certification, individuals can demonstrate their expertise in GCP and increase their chances of getting hired by organizations that use GCP for their cloud infrastructure.

Upon passing the Google Associate Cloud Engineer certification exam, you will receive a certificate that demonstrates your proficiency in operating and deploying applications, infrastructure, and services on the Google Cloud Platform. Google Associate Cloud Engineer Exam certification can help boost your career prospects, as it is recognized by employers and demonstrates that you have a strong understanding of cloud computing and the Google Cloud Platform.

100% Pass Google - Associate-Cloud-Engineer - Trustable Google Associate Cloud Engineer Exam Real Exam Questions

Are you still feeling stressful to the increasing difficulty of the Associate-Cloud-Engineer exam? If the answer is yes, you may wish to spend a little time learning our Associate-Cloud-Engineer study materials. You will think this is the most correct thing you did for preparing for the Associate-Cloud-Engineer Exam. Our Associate-Cloud-Engineer exam guide can help you pass the exam more efficiently. Just click to the free demos and you will get the exam questions to have a check!

Google Associate Cloud Engineer Exam Sample Questions (Q122-Q127):

NEW QUESTION # 122

You are using Deployment Manager to create a Google Kubernetes Engine cluster. Using the same Deployment Manager deployment, you also want to create a DaemonSet in the kube-system namespace of the cluster. You want a solution that uses the fewest possible services. What should you do?

- A. In the cluster's definition in Deployment Manager, add a metadata that has kube-system as key and the DaemonSet manifest as value.
- B. With Deployment Manager, create a Compute Engine instance with a startup script that uses kubectl to create the DaemonSet.
- **C. Add the cluster's API as a new Type Provider in Deployment Manager, and use the new type to create the DaemonSet.**
- D. Use the Deployment Manager Runtime Configurator to create a new Config resource that contains the DaemonSet definition.

Answer: C

Explanation:

Explanation

Adding an API as a type provider

This page describes how to add an API to Google Cloud Deployment Manager as a type provider. To learn more about types and type providers, read the Types overview documentation.

A type provider exposes all of the resources of a third-party API to Deployment Manager as base types that you can use in your configurations. These types must be directly served by a RESTful API that supports Create, Read, Update, and Delete (CRUD).

If you want to use an API that is not automatically provided by Google with Deployment Manager, you must add the API as a type provider.

<https://cloud.google.com/deployment-manager/docs/configuration/type-providers/creating-type-provider>

NEW QUESTION # 123

Your company wants to standardize the creation and management of multiple Google Cloud resources using Infrastructure as Code. You want to minimize the amount of repetitive code needed to manage the environment. What should you do?

- A. Use curl in a terminal to send a REST request to the relevant Google API for each individual resource.
- **B. Develop templates for the environment using Cloud Deployment Manager**
- C. Create a bash script that contains all requirement steps as gcloud commands
- D. Use the Cloud Console interface to provision and manage all related resources

Answer: B

NEW QUESTION # 124

You are working for a hospital that stores its medical images in an on-premises data room. The hospital wants to use Cloud Storage for archival storage of these images. The hospital wants an automated process to upload any new medical images to Cloud Storage. You need to design and implement a solution. What should you do?

- A. In the Cloud Console, go to Cloud Storage. Upload the relevant images to the appropriate bucket.
- B. Create a Pub/Sub topic, and enable a Cloud Storage trigger for the Pub/Sub topic. Create an application that sends all medical images to the Pub/Sub topic.
- C. Deploy a Dataflow job from the batch template, "Datastore to Cloud Storage." Schedule the batch job on the desired interval.
- **D. Create a script that uses the gsutil command line interface to synchronize the on-premises storage with Cloud Storage. Schedule the script as a cron job.**

Answer: D

NEW QUESTION # 125

Your company has multiple projects linked to a single billing account in Google Cloud. You need to visualize the costs with specific metrics that should be dynamically calculated based on company-specific criteria. You want to automate the process. What should you do?

- **A. Configure Cloud Billing data export to BigQuery for the billing account. Create a Looker Studio dashboard on top of the BigQuery export.**
- B. In the Google Cloud console, visualize the costs related to the projects in the Reports section.
- C. In the Google Cloud console, visualize the costs related to the projects in the Cost breakdown section.
- D. In the Google Cloud console, use the export functionality of the Cost table. Create a Looker Studio dashboard on top of

the CSV export.

Answer: A

NEW QUESTION # 126

You need to select and configure compute resources for a set of batch processing jobs. These jobs take around 2 hours to complete and are run nightly. You want to minimize service costs. What should you do?

- A. Select Google Kubernetes Engine. Use a single-node cluster with a small instance type.
- B. Select Compute Engine. Use VM instance types that support micro bursting.
- C. Select Google Kubernetes Engine. Use a three-node cluster with micro instance types.
- **D. Select Compute Engine. Use preemptible VM instances of the appropriate standard machine type.**

Answer: D

Explanation:

If your apps are fault-tolerant and can withstand possible instance preemptions, then preemptible instances can reduce your Compute Engine costs significantly. For example, batch processing jobs can run on preemptible instances. If some of those instances stop during processing, the job slows but does not completely stop.

Preemptible instances complete your batch processing tasks without placing additional workload on your existing instances and without requiring you to pay full price for additional normal instances.
