## Microsoft Dynamics 365 Customer Experience Analyst Sample Questions (Q69-Q74):

### NEW QUESTION # 69

You are implementing Dynamics 365 Customer Insights - Data as the company's Customer Data Platform. You set up the data sources and start the unification process.

You need to identify the primary table within the Matching conditions page.

Which two criteria should you use to determine the primary table? Each correct answer presents a complete solution. (Choose two.)

NOTE: Each correct selection is worth one point.

- A. Choose the table that has several attributes in common with other tables.
- **B. Choose the table with the most complete and reliable profile data about your customers.**
- C. Choose the table that has the most related tables.
- **D. Choose the Dynamics 365 contact table when this is available as the data source.**

**Answer: B,D**

Explanation:

Choose the table with the most complete and reliable profile data about your customers: The primary table should contain the most accurate and complete information to serve as the foundation for matching records across different sources.

Choose the Dynamics 365 contact table when this is available as the data source: The contact table in Dynamics 365 is a logical choice for the primary table when it's available because it likely contains the core customer profile data that can be unified with other data sources.

### NEW QUESTION # 70

You are the Dynamics 365 administrator for a group of financial advisors.

Advisors must use one business process flow to guide them through the standard lead to invoice process.

Each table has the following number of stages and steps:

□ You need to modify the business process flow to make it valid.

What should you reduce?

- A. number of steps per stages
- **B. total number of steps**
- C. number of tables
- D. total number of stages

**Answer: B**

Explanation:

Summary of Data

Each table (Lead, Opportunity, Quote, Order, Invoice) has:

Number of Stages: 10

Number of Steps per Stage: 10

Total Steps Calculation

For the entire process flow involving all tables:

Total Stages: 10 (Lead) + 10 (Opportunity) + 10 (Quote) + 10 (Order) + 10 (Invoice) = 50 stages Total Steps: 100 (Lead) + 100

(Opportunity) + 100 (Quote) + 100 (Order) + 100 (Invoice) = 500 steps Requirement for Valid Business Process Flow Dynamics

365 imposes limitations on business process flows, typically regarding the total number of steps and stages involved. The total number of steps can be a limiting factor for the flow to be valid.

To make the business process flow valid, you should reduce total number of steps.

Reducing the total number of steps (e.g., by decreasing the number of steps per stage or the total number of stages) will help you stay within the limits imposed by Dynamics 365 for business process flows.
