Prove Your Knowledge of Scrum and the Scrum Master Accountabilities

The Professional Scrum Master (PSM I) certification validates your knowledge of the Scrum framework, the Scrum Master accountabilities and how to apply Scrum.

PSM I is recognized by the industry as a certification that demonstrates a fundamental level of Scrum mastery. As a PSM I certification holder, you have proven that you understand Scrum as described in the Scrum Guide and how to apply Scrum in Scrum Teams. PSM I holders have a consistent terminology and approach to Scrum.

While attendance is not a prerequisite, there are courses available to help you prepare for the test and gain a stronger understanding of Scrum. Depending on your role, either the [Applying Professional Scrum](#) or [Professional Scrum Master](#) course is highly recommended.

PSM I includes questions from the following Focus Areas as defined in the [Professional Scrum Consistencies](#):

- [Understanding and Applying the Scrum Framework](#)
 - Empiricism, Scrum Values, Scrum Team, Events, Artifacts, Done
- [Developing People and Teams](#)
 - Self-Managing Teams, Facilitation, Coaching and Mentoring
- [Managing Products with Agility](#)
 - Forecasting & Release Planning, Product Value, Product Backlog Management, Stakeholders & Customers

Translation

Many people successfully use the Google Translate Plugin to take the test in their native language. If you plan to use the Google Translate Plugin you MUST follow [these instructions for using the Google Translate Plugin](#). We cannot guarantee the quality of the translation, however feedback has been quite good.

Accommodations for Physical or Intellectual Disabilities

We take these considerations very seriously, and examine each case individually. Please contact support@scrum.org regarding your circumstances and we can advise you on next steps.

PSM-I資格参考書 & PSM-I試験解説問題

当社のPSM-Iトレーニング資料は国内外で有名です。主な理由は、コア競争力を持たない他の会社があるためです。市場には多くの複雑な類似製品があります。独自に必要です。他の製品とのPSM-Iテストの質問は、PSM-I学習教材を更新する最も中核的な専門家チームがあることです。製品のポイント。

Scrum Professional Scrum Master I 認定 PSM-I 試験問題 (Q243-Q248):

質問 # 243

What are three ways Scrum promotes self-organization? (Choose three.)

- **A. By being a lightweight framework.**
- B. By not allowing documentation.
- **C. By the Development Team deciding what work to do in a Sprint.**

- **D. By removing titles for Development Team members.**
- E. By preventing stakeholders from entering the development room.

正解: A、C、D

解説:

According to the Scrum Guide 1, Scrum promotes self-organization by giving autonomy and empowerment to the Developers who decide how to do their work within a Sprint. The Developers have no titles other than Developer, regardless of their specialization or skills. Scrum is a lightweight framework that minimizes prescription and maximizes flexibility and adaptability.

質問 # 244

(Which of the following might the Scrum Team discuss during a Sprint Retrospective?

Choose the best answer.)

- A. Methods of communication.
- **B. All of the above.**
- C. The way the Scrum Team does Sprint Planning.
- D. Skills needed to improve the Developers' ability to deliver.
- E. The Definition of Done.

正解: B

解説:

The correct answer is E because all of the listed topics are appropriate subjects for a Sprint Retrospective. The Scrum Guide states that during the Sprint Retrospective, the Scrum Team inspects how the last Sprint went with regard to individuals, interactions, processes, tools, and their Definition of Done. The team then identifies improvements to increase quality and effectiveness.

Methods of communication are relevant because communication strongly affects collaboration and transparency. The way Sprint Planning is conducted is also valid to inspect if the team believes planning could be more effective. Skills needed to improve delivery are appropriate because a Scrum Team continuously seeks to become more capable and cross-functional. The Definition of Done is explicitly a valid retrospective topic because it may need refinement as the team matures and raises quality standards.

The Sprint Retrospective is the Scrum Team's formal opportunity to inspect and adapt its ways of working. It is not limited to one narrow process area. Anything that affects the team's effectiveness, quality, collaboration, or ability to deliver valuable Increments can be discussed, making "All of the above" the best answer.

質問 # 245

(When is the Sprint Backlog created?

Choose the best answer.)

- **A. During Sprint Planning.**
- B. During refinement.
- C. During the Sprint Retrospective.
- D. Prior to Sprint Planning.

正解: A

解説:

The correct answer is A because the Sprint Backlog is created during Sprint Planning. The Sprint Backlog is composed of the Sprint Goal, the Product Backlog items selected for the Sprint, and a plan for delivering them. During Sprint Planning, the Scrum Team collaborates to decide why the Sprint is valuable, what can be done during the Sprint, and how the chosen work will be accomplished. This is when the Sprint Backlog comes into existence.

Option B is incorrect because although Product Backlog refinement may prepare items before Sprint Planning, the Sprint Backlog itself is not created until the Sprint Planning event. Option C is incorrect because refinement supports readiness and clarity of Product Backlog items, but it does not establish the Sprint Backlog. Option D is incorrect because the Sprint Retrospective is focused on improvement of the team's effectiveness and ways of working, not on creating the Sprint Backlog for the next Sprint. This distinction matters in Scrum because Sprint Planning formally begins the Sprint by creating a clear commitment around the Sprint Goal and the work needed to produce a useful Increment.

質問 # 246

When must a Product Owner release each Increment? (Choose the best answer.)

- A. After every Sprint, Without exception.
- **B. When it makes sense.**
- C. When the Scrum Team finishes their work.
- D. Whenever the product is free of defects.

正解: B

質問 # 247

When is it most appropriate for a Scrum Team to change the definition of "Done"?

- **A. During the Sprint Retrospective.**
- B. Prior to starting a new Sprint.
- C. During Spring Planning.
- D. Prior to starting a new project.

正解: A

解説:

According to the Scrum Guide 1, one aspect of Scrum Teams inspecting how they work toward their Product Goal is that they improve their definition of "Done" over time. The Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint.

Therefore, it is most appropriate for a Development Team to change the definition of "Done" during the Sprint Retrospective.
