우리 Fast2test에서는 여러분을 위하여 정확하고 우수한 서비스를 제공하였습니다. 여러분의 고민도 덜어드릴 수 있습니다. 빨리 성공하고 빨리Microsoft GH-900인증 시험을 패스하고 싶으시다면 우리 Fast2test를 장바구니에 넣으시죠 . Fast2test는 여러분의 아주 좋은 합승가이드가 될것입니다. Fast2test로 여러분은 같고 싶은 인증서를 빠른시일내에 얻게될것입니다.

Microsoft GH-900 시험요강:

주제	소개
주제 1	Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
주제 2	Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.

주제 3	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
주제 4	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
주제 5	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
주제 6	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.

GH-900퍼펙트 덤프문제 덤프는 GitHub Foundations 시험패스의 최고의 공부자료

Fast2test의 도움을 받겠다고 하면 우리는 무조건 최선을 다하여 한번에 패스하도록 도와드릴 것입니다. 또한 일년 무료 업뎃서비스를 제공합니다. 중요한 건 덤프가 갱신이 되면 또 갱신버전도 여러분 메일로 보내드립니다. 망설이지 마십시오. 우리를 선택하는 동시에 여러분은 GH-900시험고민을 하시지 않으셔도 됩니다. 빨리 우리덤프를 장바구니에 넣으시죠.

최신 GitHub Administrator GH-900 무료샘플문제 (Q58-Q63):

질문 # 58

What best describes Markdown?

- A. Containerization solution
- B. Programming language
- C. Scripting language
- D. Version control system
- E. Markup language

정답: E

설명:

Markdown is a lightweight markup language with plain-text formatting syntax. It is designed to be easy to write and read in its raw form, and it can be converted into HTML and other formats. Markdown is commonly used for formatting readme files, writing messages in online discussion forums, and creating rich text documents.

Markup Language:

Option A is correct because Markdown is indeed a markup language. It is not a programming language, scripting language, version control system, or containerization solution.

Incorrect Options:

Option B is incorrect because Markdown is not a programming language; it does not involve control structures or variables.

Option C is incorrect because Markdown is not used for scripting or automation.
Option D is incorrect because Markdown does not manage version control.
Option E is incorrect because Markdown is not related to containerization technologies like Docker.

GitHub Docs: Basic writing and formatting syntax

질문 # 59

As a user, what feature can you use to merge proposed changes in a repository on GitHub?

- A. Discussions
- B. Issues
- C. Projects
- **D. Pull requests**

정답: D

설명:

The feature you can use to merge proposed changes in a repository on GitHub is Pull requests. Pull requests are a core feature of GitHub, allowing developers to propose changes to a codebase, review code, discuss the changes, and eventually merge them into the main branch. This collaborative workflow ensures that code is reviewed and vetted before becoming part of the project.

질문 # 60

You are collaborating on a large open-source project hosted on GitHub. To stay informed about discussions and progress, you want to be notified whenever someone mentions your username or assigns you an issue. You're also planning to showcase your project through a website using GitHub Pages. Which of the following actions or features would help you manage notifications effectively and publicize your project? (Choose three.)

- **A. Subscribe to an individual issue, pull request, or gist to receive updates**
- **B. Use GitHub Pages to host a static website directly from a repository**
- **C. Use the mentions: qualifier to find threads where you are mentioned**
- D. Enable GitHub Actions to send email notifications for every commit

정답: A,B,C

설명:

To effectively manage notifications and showcase your project, you can use the mentions: qualifier to find discussions where you're mentioned, subscribe to specific issues or pull requests to receive updates, and leverage GitHub Pages to host a static website that highlights your work.

Option A is CORRECT because this helps you quickly locate discussions in which your username was mentioned, so you can stay informed.

Option C is CORRECT because GitHub allows users to subscribe to specific issues, pull requests, or gists so that they receive notifications related to those conversations.

Option D is CORRECT because this feature allows you to showcase your project publicly, making it accessible to a wider audience through a hosted website.

질문 # 61

Which of the following items can you customize for an individual Codespace?
(Each answer presents a complete solution. Choose three.)

- **A. Shell**
- B. Operating system
- C. Branch protections
- **D. Default editor**
- **E. Name**

정답: A,D,E

설명:

When using GitHub Codespaces, you can customize several aspects of the development environment:

Shell: You can choose the default shell to be used in the Codespace, such as Bash, Zsh, or PowerShell.

Name: Users can customize the name of their Codespace for easier identification.

Default editor: You can choose which editor to use within the Codespace, such as Visual Studio Code or others that may be supported.

Branch protections and the operating system are not customizable for an individual Codespace within GitHub, making the options Shell, Name, and Default editor the correct answers.

질문 # 62

What are three valid states for a file in a git repository? (Choose three.)

- A. Modified
- B. Tracked
- C. Committed
- D. Uncommitted
- E. Staged

정답: A,C,E

설명:

In a Git repository, a file can be in one of the following three valid states:

Committed: The file is saved in the local repository. It is part of the permanent history of the project.

Modified: The file has been changed but not yet staged or committed. It is in the working directory.

Staged: The file has been marked to be included in the next commit. It is in the staging area, ready to be committed.

These states represent the typical lifecycle of a file as it moves through the process of being edited, reviewed, and saved in Git.

질문 # 63
