

# Study CompTIA CNX-001 Reference - CNX-001 Simulations Pdf

P.S. Free 2026 CompTIA CNX-001 dumps are available on Google Drive shared by DumpsTests: <https://drive.google.com/open?id=1eyl8ZQAQ3PcIORFJ63w49fmahVpCHboE->

There is no such excellent exam material like our DumpsTests CNX-001 exam materials. We not only provide all candidates with most reliable guarantee, but also have best customer support. Our CNX-001 exam material's efficient staff is always prompt to respond you. If you have any doubts about our exam materials and need detailed answer, you can send emails to our customers' care department. If you are in hurry, you can consult our CNX-001 exam material's online customer service. We will solve your problem as soon as possible. Our customer support is available for you 24/7. 365 days a Year. Our DumpsTests CNX-001 Exam Materials have managed to build an excellent relationship with our users through the mutual respect and attention we provide to everyone. We believed that you will pass the CNX-001 exam in the first attempt without any obstacles, and will get your ideal job.

This feature provides students with real-time examination scenarios to feel some pressure and solve the CNX-001 practice exam as a real threat. These CompTIA CloudNetX Certification Exam (CNX-001) practice tests are important for students so they can learn to solve real CompTIA CNX-001 Exam Questions and pass CompTIA CNX-001 certification test in a single try. The desktop-based CompTIA CNX-001 practice test software works on Windows and the web-based CompTIA CloudNetX Certification Exam practice exam is compatible with all operating systems.

## Updated CompTIA CNX-001 Exam Questions And Answer

Since different people have different preferences, we have prepared three kinds of different versions of our CNX-001 practice test: PDF, Online App and software. Last but not least, our customers can accumulate exam experience as well as improving their exam skills in the mock exam. And your success is 100% guaranteed for our pass rate of CNX-001 Exam Questions is as high as 99% to 100%. And We have put substantial amount of money and effort into upgrading the quality of our CNX-001 Exam Preparation materials.

### CompTIA CloudNetX Certification Exam Sample Questions (Q33-Q38):

#### NEW QUESTION # 33

Server A (10.2.3.9) needs to access Server B (10.2.2.7) within the cloud environment since they are segmented into different network sections. All external inbound traffic must be blocked to those servers. Which of the following need to be configured to appropriately secure the cloud network? (Choose two.)

- A. Network security group rule: deny 0.0.0.0/0 to 10.2.0.0/16
- B. Network security group rule: allow 10.2.3.9 to 10.2.2.7
- C. Network security group rule: allow 10.2.0.0/16 to 0.0.0.0/0
- D. Network security group rule: deny 10.2.0.0/16 to 0.0.0.0/0
- E. Firewall rule: deny 10.2.0.0/16 to 0.0.0.0/0
- F. Firewall rule: allow 10.2.0.0/16 to 0.0.0.0/0

**Answer: A,B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A: An explicit allow rule in the Network Security Group (NSG) permitting Server A (10.2.3.9) to communicate with Server B (10.2.2.7) ensures intra-cloud communication between segments.

C: A deny rule that blocks any inbound access from external sources (0.0.0.0/0 # internal range 10.2.0.0/16) effectively prevents unsolicited inbound traffic from the public internet, securing the internal servers.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Cloud Security Groups and Firewall Policies":

"NSGs should be configured with least privilege principles. Allow intra-subnet or intra-application communication while explicitly denying unsolicited internet traffic."

"Ingress and egress filtering policies should block all traffic by default and permit only what's required." Other options:

\* B. Incorrect - this allows internal range to internet, which is not requested.

\* D & E. Apply to outbound policies, not relevant to the need to block inbound external access.

\* F. Incorrect - this denies internal resources from going outbound, not inbound protection.

#### NEW QUESTION # 34

A network administrator is troubleshooting an outage at a remote site. The administrator examines the logs and determines that one of the internet links at the site appears to be down. After the service provider confirms this information, the administrator fails over traffic to the backup link. Which of the following should the administrator do next?

- A. Identify the problem.
- B. Establish a plan of action.
- C. Verify full system functionality.
- D. Document the lessons learned.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to the standard CompTIA troubleshooting methodology, once the issue has been identified and a solution has been implemented (e.g., failing over traffic to the backup link), the next logical step is to verify full system functionality. This ensures that the backup path is working as intended and that services have resumed properly for the users.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Troubleshooting Process":

"After implementing the solution, it is critical to verify full system functionality to ensure the resolution has addressed the problem without causing unintended consequences." Other options:

\* A. Documenting lessons learned is the final step.

\* B. The plan of action should have been created before the failover.

\* C. Identifying the problem already occurred earlier in the scenario.

### NEW QUESTION # 35

A company is migrating an application to the cloud for modernization. The engineer needs to provide dependencies between application and database tiers in the environment. Which of the following should the engineer reference in order to best meet this requirement?

- A. SOW
- B. WBS
- C. Internal knowledge base article
- **D. CMDB**
- E. Diagram of physical server locations

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A CMDB (Configuration Management Database) is a centralized repository used to store information about IT assets and their relationships, including configuration items such as servers, applications, and databases. It provides visibility into dependencies between infrastructure components, including application and database tiers. This is essential for cloud migration and modernization projects where understanding interdependencies ensures accurate planning and reduces risks.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under the "Infrastructure Documentation and Planning" domain:

"CMDBs are used to track asset relationships, allowing network and systems engineers to visualize and manage dependencies between services, applications, and infrastructure components critical for change management and cloud migration." Other options:

- \* A. Internal knowledge base articles may offer general guidance but not structured dependency mapping.
- \* C. WBS (Work Breakdown Structure) outlines tasks and deliverables, not technical dependencies.
- \* D. Physical server diagrams are not relevant in virtualized/cloud environments.
- \* E. SOW (Statement of Work) defines project scope but lacks infrastructure-level detail.

### NEW QUESTION # 36

A cloud network engineer needs to enable network flow analysis in the VPC so headers and payload of captured data can be inspected. Which of the following should the engineer use for this task?

- A. Network flows
- B. Application monitoring
- **C. Traffic mirroring**
- D. Syslog service

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Traffic mirroring allows a copy of network traffic - including headers and payloads - to be sent to an analysis tool or appliance for deep packet inspection. This is essential for security analysis, network troubleshooting, and performance diagnostics in cloud environments.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Packet Capture and Network Flow Monitoring":

"Traffic mirroring enables the capture of full packet data, including payloads, for forensic or performance analysis within cloud networks." Other options:

- \* A. Application monitoring focuses on app-level metrics, not packet inspection.
- \* B. Syslog is log-based, not for inspecting packets.
- \* D. Network flows (e.g., NetFlow, VPC flow logs) provide metadata (source, destination, size) but not full packet content.

### NEW QUESTION # 37

A network administrator must connect a remote building at a manufacturing plant to the main building via a wireless connection. Which of the following should the administrator choose to get the greatest possible range from the wireless connection? (Choose two.)

- A. Built-in antenna
- **B. 2.4GHz**
- C. 5GHz
- D. 6GHz
- **E. Patch antenna**
- F. Omnidirectional antenna

**Answer: B,E**

Explanation:

2.4 GHz: The lower-frequency 2.4 GHz band propagates farther and better penetrates obstacles than 5 GHz or 6 GHz, giving you greater link distance.

Patch antenna: A directional (patch) antenna focuses RF energy into a narrow beam, maximizing gain and range between two fixed points - the best for a long-haul wireless link.

## NEW QUESTION # 38

.....

As the most important element that almost all the candidates will take into consider, the pass rate of our CNX-001 exam questions is high as 98% to 100%, which is unique in the market and no one has made it. And also the exam passing guarantee that makes our CNX-001 Study Guide superior in the market. As the best seller, our CNX-001 learning braindumps are very popular among the candidates. Many of the loyal customers are introduced by their friends or classmates.
