## Free PDF 2026 Google Associate-Google-Workspace-Administrator: Associate Google Workspace Administrator Accurate Reliable Dumps Ppt

The Associate Google Workspace Administrator PDF practice material contains actual Google Associate-Google-Workspace-Administrator Exam Questions compiled by certified experts around the globe to benefit candidates. The criteria and pattern of the Associate Google Workspace Administrator exam often change, and hence it is essential to use the updated exam study material for preparation. ITdumpsfree provides free updates after purchase so that you get the latest Google Exam Questions for the exam.

### Google Associate Google Workspace Administrator Sample Questions (Q46-Q51):

#### NEW QUESTION # 46

Multiple users in your organization are reporting that Calendar invitations sent from a specific department are not being received. You verified that the invitations are being sent and there are no error messages in the sender's logs. You want to troubleshoot the issue. What should you do?

- A. Disable and re-enable the Calendar service for the affected users to refresh their connection.
- B. Verify that the senders in the specific department have the necessary permissions to share their calendars externally and send invitations outside of the organization.
- **C. Analyze the message headers of the sent invitations by using the Google Admin Toolbox to identify any delivery issues.**
- D. Check the affected users' Calendar settings to confirm whether they have accidentally blocked invitations from the specific department.

**Answer: C**

Explanation:

Using the Google Admin Toolbox to analyze the message headers of the sent invitations helps you identify if there are any issues with the delivery of the invitations, such as misrouted messages or issues with email delivery to the affected users. This approach will give you detailed information on what might be causing the issue, even if no error messages appear in the sender's logs.

#### NEW QUESTION # 47

Your company wants to enable single sign-on (SSO) for its employees to access a newly acquired cloud-based marketing platform. The marketing platform vendor has confirmed SAML 2.0 compatibility and provided the necessary metadata. You need to streamline user access and centralize authentication through Google Workspace. What should you do?

- A. Instruct employees to log in to the marketing platform using the Sign In with Google functionality.
- B. Request an API key from the marketing platform vendor for SAML integration.
- **C. Create a new SAML application in the Google Admin console.**
- D. Enable two-factor authentication for all users to enhance security before implementing SSO.

**Answer: C**

Explanation:

To enable single sign-on (SSO) through Google Workspace, you need to create a new SAML application in the Google Admin console. This allows users to authenticate centrally through Google Workspace when accessing the marketing platform, leveraging SAML 2.0 compatibility. You can then upload the metadata provided by the marketing platform vendor to complete the integration. This approach ensures streamlined access and centralized authentication for your employees.

#### NEW QUESTION # 48

You work for a global organization that has offices in the United States and the European Union (EU). There is an organizational unit (OU) for employees in the United States and a separate OU for employees in the EU. Your company regulations need you to ensure that your users' data is located in the same region as their physical office. What should you do?

- A. Turn on advanced settings and select Disable features that may process data across multiple regions.
- B. Turn on advanced settings and select Enable features that may process data across multiple regions.
- **C. Set a data region policy for each region's OU.**
- D. Set the OU data location to No preference.

**Answer: C**

Explanation:

Google Workspace allows organizations to control the geographic location of their data for compliance and regulatory reasons, often referred to as "data regions" or "data locality." To ensure user data is located in the same region as their physical office, especially for compliance with regulations like those in the EU, you need to set a data region policy for the respective organizational units.

Here's why the other options are incorrect:

A . Set the OU data location to No preference. "No preference" means Google can store the data wherever it deems appropriate, which goes against the requirement of ensuring data is located in a specific region (e.g., EU for EU users, US for US users).

B . Turn on advanced settings and select Enable features that may process data across multiple regions. This option would allow data to be processed across multiple regions, which directly contradicts the company regulation that requires data to be located in the same region as their physical office.

C . Turn on advanced settings and select Disable features that may process data across multiple regions. While this might seem related to controlling data flow, the primary mechanism for specifying data residency for OUs is through data region policies, not simply disabling cross-region processing features. Disabling such features might limit functionality without directly setting the data storage region.

Reference from Google Workspace Administrator:

Choose a data region for your data: Google Workspace provides options for administrators to choose a data region for covered Google Workspace services, which applies to primary customer data at rest. This can be set at the organizational unit (OU) level.

Reference:

Data regions FAQ: This resource provides more details on what data is covered, how data regions work, and the implications of setting them. It emphasizes that you can set the data region at the OU level.

#### NEW QUESTION # 49

You are configuring data governance policies for your organization's Google Drive. You need to ensure that employees in the Research and Development department can share files with external users, while employees in the Finance department are blocked from sharing any files externally. What should you do?

- **A. Create a Drive trust rule that allows external sharing for the Research and Development organizational unit (OU) and another rule that blocks external sharing for the Finance OU.**
- B. Enable Vault for the Finance organizational unit (OU) to ensure that all files shared externally are retained and auditable.
- C. Create a separate Google Workspace domain for the Finance organizational unit (OU) and disable external sharing for that domain.
- D. Apply an organization-wide data loss prevention (DLP) rule that scans for sensitive information and prevents external sharing of those files. Apply that rule to the Finance organizational unit (OU).

**Answer: A**

Explanation:

To enforce different external sharing policies for different departments within the same Google Workspace domain, you should use Google Drive sharing policies configured at the organizational unit (OU) level. Drive trust rules are the mechanism within Google Workspace to control how users can share files inside and outside the organization.

Here's why option A is correct and why the others are not the most appropriate solutions:

A . Create a Drive trust rule that allows external sharing for the Research and Development organizational unit (OU) and another rule that blocks external sharing for the Finance OU.

Google Workspace allows administrators to set specific Drive sharing settings for different organizational units. By creating a Drive trust rule (or more accurately, configuring the external sharing options within Drive and Docs settings for each OU), you can enable external sharing for the Research and Development OU while simultaneously restricting or completely blocking external sharing for the Finance OU. This granular control at the OU level directly addresses the requirement of having different policies for the two departments.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Workspace Admin Help documentation on "Control how users can share Drive files externally" (or similar titles) explains how to manage external sharing options at the organizational unit level. This includes: Setting sharing options by organizational unit: The documentation details how to navigate to Apps > Google Workspace > Drive and Docs > Sharing settings in the Admin console and then select a specific organizational unit to customize its sharing permissions.

Controlling sharing outside your organization: This section explains the various settings available, including allowing sharing with anyone, only with specific domains, or completely preventing external sharing.

While the term "Drive trust rule" might be used in more advanced contexts related to trusted domains, the core functionality of controlling external sharing based on OUs is the key here. The settings within the Drive and Docs sharing configuration for each OU achieve the desired outcome.

B . Enable Vault for the Finance organizational unit (OU) to ensure that all files shared externally are retained and auditable. Google Vault is used for eDiscovery, legal holds, and retention of data. While it can retain and audit externally shared files (if sharing is allowed), it does not prevent external sharing. Enabling Vault for the Finance OU would not block them from sharing files externally; it would only ensure that if they do, those shared files are preserved and can be audited. This does not meet the requirement of blocking external sharing for the Finance department.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on Google Vault clearly outlines its purpose and functionalities, which are focused on data retention, legal holds, and search/export for compliance and legal reasons, not on preventing sharing.

C . Apply an organization-wide data loss prevention (DLP) rule that scans for sensitive information and prevents external sharing of those files. Apply that rule to the Finance organizational unit (OU).

While DLP rules can prevent the external sharing of files containing sensitive information, they are triggered by the content of the files, not by a blanket restriction on all external sharing for a specific OU. The requirement is to block all external sharing for the Finance department, regardless of the content. Applying a DLP rule only to the Finance OU might be complex to manage for a complete block and is not the most direct way to achieve the stated goal. OU-based sharing settings are more straightforward for this purpose.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on Data Loss Prevention (DLP) explains how to create rules based on content to prevent sensitive data leaks. While DLP can control sharing, it's not the primary mechanism for completely blocking all external sharing for an entire OU.

D . Create a separate Google Workspace domain for the Finance organizational unit (OU) and disable external sharing for that domain.

Creating a separate Google Workspace domain for the Finance department is an overly complex and administratively burdensome solution. It would involve managing two separate domains, user accounts, billing, and potentially complicate internal collaboration between departments. Using organizational units within the same domain provides a much more efficient and manageable way to apply different policies.

Associate Google Workspace Administrator topics guides or documents reference: Google Workspace's organizational unit structure is specifically designed to allow administrators to apply different settings and policies to groups of users within a single domain, avoiding the need for separate domains for policy enforcement.

Therefore, the most direct and appropriate solution is to configure the Google Drive sharing settings at the organizational unit level, allowing external sharing for the Research and Development OU and blocking it for the Finance OU.

### NEW QUESTION # 50

You are configuring Google Chat for your organization. Using the Admin console, you want to enable employees to view their chat history by default and allow employees to turn off chat history. What should you do?

- A. Set the top-level default conversation history setting to ON and allow users to change their history setting.
- B. Configure Google Vault to retain all Chat messages, and exclude organizational units (OUs) with users who want to turn Chat history off.
- C. Set the space history setting to OFF and chat history to ON.
- D. Set the top-level default conversation history settings to OFF and allow users in each organizational unit (OU) to change their history setting.

**Answer: A**

Explanation:

By setting the default conversation history to "ON" at the top level, all employees will have chat history enabled by default. Allowing users to change their own history setting gives them the flexibility to turn off chat history if they choose to do so. This approach aligns with your goal of enabling chat history by default while still giving employees the option to turn it off.

### NEW QUESTION # 51

.....

if you choose to use the software version of our Associate-Google-Workspace-Administrator study guide, you will find that you can download our Associate-Google-Workspace-Administrator exam prep on more than one computer and you can practice our Associate-Google-Workspace-Administrator exam questions offline as well. We strongly believe that the software version of our Associate-Google-Workspace-Administrator Study Materials will be of great importance for you to prepare for the exam and all of the employees in our company wish you early success!
