## **New Palo Alto Networks Cybersecurity-Practitioner Exam Pattern & Cybersecurity-Practitioner Valid Cram Materials**

The Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) mock exams will allow you to prepare for the Cybersecurity-Practitioner exam in a smarter and faster way. You can improve your understanding of the Cybersecurity-Practitioner exam objectives and concepts with the easy-to-understand and actual Cybersecurity-Practitioner Exam Questions offered by

ITCertMagic. ITCertMagic makes the Cybersecurity-Practitioner Practice Questions affordable for everyone and allows you to find all the information you need to polish your skills to be completely ready to clear the Cybersecurity-Practitioner exam on the first attempt.

## Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q207-Q212):

### NEW QUESTION # 207

On an endpoint, which method is used to protect proprietary data stored on a laptop that has been stolen?

- A. operating system patches
- B. periodic data backups
- C. endpoint-based firewall
- D. full-disk encryption

**Answer: D**

Explanation:

Full-disk encryption is a method of protecting data on a laptop that has been stolen by encrypting the entire hard drive, making it unreadable without the correct password or key. This prevents unauthorized access to the proprietary data stored on the laptop, even if the thief removes the hard drive and connects it to another device. Full-disk encryption can be enabled using built-in features such as BitLocker on Windows or FileVault on macOS, or using third-party software such as Absolute Home & Office12.

### NEW QUESTION # 208

Which endpoint protection security option can prevent malware from executing software?

- A. Dynamic access control
- B. Application allow list
- C. URL filtering
- D. DNS Security

**Answer: B**

Explanation:

An application allow list prevents malware from executing by only permitting approved applications to run on an endpoint. Any unauthorized or unknown software, including malicious programs, is automatically blocked from executing.

### NEW QUESTION # 209

A high-profile company executive receives an urgent email containing a malicious link. The sender appears to be from the IT department of the company, and the email requests an update of the executive's login credentials for a system update.

Which type of phishing attack does this represent?

- A. Whaling
- B. Angler phishing
- C. Pharming
- D. Vishing

**Answer: A**

Explanation:

Whaling is a targeted phishing attack aimed at high-profile individuals, such as executives. The attacker impersonates a trusted entity (e.g., IT department) to trick the executive into revealing sensitive credentials. This is a form of spear phishing specifically focused on "big fish" targets.

### NEW QUESTION # 210

Which two statements apply to the SSL/TLS protocol? (Choose two.)

- A. It contains password characters that users enter to access encrypted data.
- **B. It ensures the data that is transferred between a client and a server remains private.**
- **C. It is a method used to encrypt data and authenticate web-based communication.**
- D. It provides administrator privileges to manage and control the access of network resources.

**Answer: B,C**

Explanation:

SSL/TLS encrypts and authenticates web-based communication to ensure secure data transmission over networks. It ensures privacy by encrypting the data exchanged between a client and a server, protecting it from interception or tampering. It doesn't handle user input like passwords directly.

#### **NEW QUESTION # 211**

Based on how much is managed by the vendor, where can CaaS be situated in the spread of cloud computing services?

- A. between FaaS and Serverless
- B. between On-Prem and IaaS
- C. between PaaS and FaaS
- **D. between IaaS and PaaS**

**Answer: D**

Explanation:

CaaS, or Containers-as-a-Service, is a cloud service that allows users to manage and deploy applications using containers and clusters. CaaS can be situated between IaaS and PaaS in the spread of cloud computing services, based on how much is managed by the vendor. IaaS, or Infrastructure-as-a-Service, provides the lowest level of abstraction, where users have to manage the servers, storage, network, and operating system. PaaS, or Platform-as-a-Service, provides a higher level of abstraction, where users only have to manage the application code and data. FaaS, or Function-as-a-Service, provides the highest level of abstraction, where users only have to manage the functions or logic of the application. CaaS falls in between IaaS and PaaS, as it provides users with more control over the container orchestration and configuration than PaaS, but also simplifies the infrastructure management and scaling than IaaS.

Reference:

What is CaaS? from Red Hat

Containers as a Service from Atlassian

Container as a Service (CaaS) from GeeksforGeeks

#### **NEW QUESTION # 212**

.....

With three versions of products, our Cybersecurity-Practitioner learning questions can satisfy different taste and preference of customers with different use: PDF & Software & APP versions. Without ambiguous points of questions make you confused, our Cybersecurity-Practitioner practice materials can convey the essence of the content suitable for your exam. With our Cybersecurity-Practitioner exam guide, you will achieve what you are expecting with ease.
