As soon as you enter the learning interface of our system and start practicing our Databricks Databricks-Certified-Data-Engineer-Associate learning materials on our Windows software, you will find small buttons on the interface. These buttons show answers, and you can choose to hide answers during your learning of our Databricks Databricks-Certified-Data-Engineer-Associate Exam Quiz so as not to interfere with your learning process.

Databricks Certified Data Engineer Associate Exam is a valuable certification for individuals who are looking to demonstrate their proficiency in data engineering using Databricks. Databricks Certified Data Engineer Associate Exam certification is recognized globally and is a testament to an individual's skills and knowledge in the field of data engineering. Databricks Certified Data Engineer Associate Exam certification can open up new career opportunities, increase earning potential, and enhance an individual's credibility as a data engineer.

To prepare for the Databricks Certified Data Engineer Associate exam, candidates can take advantage of a range of resources, including study guides, practice exams, and training courses. Databricks-Certified-Data-Engineer-Associate Exam is administered online and can be taken from anywhere in the world. Successful candidates will receive a digital badge and a certificate that they can use to showcase their skills and knowledge to potential employers.

Reliable Databricks-Certified-Data-Engineer-Associate Exam Sample - Databricks-Certified-Data-Engineer-Associate Test Registration

Passing an exam isn't an easy thing for some candidates, if you choose the Databricks-Certified-Data-Engineer-Associate training materials of us, we will make the exam easier for you. Databricks-Certified-Data-Engineer-Associate training materials include knowledge points, you can remember them through practicing. Databricks-Certified-Data-Engineer-Associate questions and answers will list the right answer for you, what you need to do is to practice them. In addition, there are experienced specialists checking the Databricks-Certified-Data-Engineer-Associate Exam Dumps, they will ensure the timely update for the latest version.

The GAQM Databricks-Certified-Data-Engineer-Associate (Databricks Certified Data Engineer Associate) Certification Exam is a professional certification program designed to assess the skills and knowledge of individuals working in the field of data engineering. Databricks Certified Data Engineer Associate Exam certification validates the ability of data engineers to design, build, and maintain data pipelines and data warehouses using Databricks technologies. Databricks-Certified-Data-Engineer-Associate Exam covers a wide range of topics, including data ingestion, data transformation, data modeling, data warehousing, and data quality.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q129-Q134):

NEW QUESTION # 129

A data engineer is standardizing repository layouts for multiple teams adopting Databricks Asset Bundles. The engineer wants to ensure every project has a single authoritative configuration file at the repository root that defines the bundle name, targets, workspace settings, permissions, and resource mappings (for jobs and pipelines). What strategy should the data engineer use to meet the goal?

- A. Place a databricks.yml in a databricks/hidden folder at the repository root; only hidden locations are valid for bundle configs.
- **B. Place exactly one databricks.yml at the repository root; it is the main configuration file and may reference additional configuration files via the include mapping.**
- C. Place multiple databricks.yml files under each subfolder (for example, jobs/pipelines/, workspace/) and merge them at deploy time using the include mapping.
- D. Place a databricks.yml at the repository root and optional databricks.yml in subfolders; the CLI prefers .yamlover .yml when both exist.

Answer: B

Explanation:

Databricks Asset Bundles require a single authoritative databricks.yml file at the repository root that defines core bundle configuration, while allowing modularization by referencing additional files through the include mapping.

NEW QUESTION # 130

A data engineer needs to ingest streaming data from Kafka into a Delta Lake table using Databricks. The pipeline must guarantee exactly-once processing semantics and maintain checkpoint information to recover from failures. Which Spark Structured Streaming feature ensures reliable processing and fault tolerance?

- A. Watermarking
- B. Partition pruning
- C. Caching
- **D. Checkpointing**

Answer: D

NEW QUESTION # 131

A data engineer wants to optimize query performance for a Delta table storing billions of records.

Queries frequently filter on the column transaction_date. Which Delta Lake feature should be applied to physically organize the data and reduce the amount of data scanned during query execution?

- **A. Z-Ordering**
- B. Caching
- C. VACUUM
- D. Broadcast join

Answer: A

NEW QUESTION # 132

A data engineer is onboarding a new bronze ingestion pipeline in Databricks with Unity Catalog.

The team wants Databricks to handle storage layout, apply platform optimizations over time, and simplify lifecycle management so that when a table is dropped, its underlying data is also cleaned up according to Databricks-managed retention policies.

Which table type should the data engineer create for these ingestion tables?

- A. Foreign tables federated from an external catalog to delegate optimization to the source system.
- **B. Managed tables so that Unity Catalog manages both metadata and underlying data lifecycle.**
- C. Temporary views over files to avoid table-level governance and lifecycle coupling.
- D. External tables with a LOCATION pointing to an external volume for full control of file layout.

Answer: B

Explanation:

Managed tables allow Unity Catalog and Databricks to control both metadata and underlying data storage, enabling automatic optimizations, simplified lifecycle management, and cleanup of data files when tables are dropped according to platform-managed policies.

NEW QUESTION # 133

Which of the following describes when to use the CREATE STREAMING LIVE TABLE (formerly CREATE INCREMENTAL LIVE TABLE) syntax over the CREATE LIVE TABLE syntax when creating Delta Live Tables (DLT) tables using SQL?

- A. CREATE STREAMING LIVE TABLE should be used when the previous step in the DLT pipeline is static.
- B. CREATE STREAMING LIVE TABLE is redundant for DLT and it does not need to be used.
- C. CREATE STREAMING LIVE TABLE should be used when the subsequent step in the DLT pipeline is static.
- D. CREATE STREAMING LIVE TABLE should be used when data needs to be processed through complicated aggregations.
- E. CREATE STREAMING LIVE TABLE should be used when data needs to be processed incrementally.

Answer: E

Explanation:

A streaming live table or view processes data that has been added only since the last pipeline update.

Streaming tables and views are stateful; if the defining query changes, new data will be processed based on the new query and existing data is not recomputed. This is useful when data needs to be processed incrementally, such as when ingesting streaming data sources or performing incremental loads from batch data sources. A live table or view, on the other hand, may be entirely computed when possible to optimize computation resources and time. This is suitable when data needs to be processed in full, such as when performing complex transformations or aggregations that require scanning all the data. References: Difference between LIVE TABLE and STREAMING LIVE TABLE, CREATE STREAMING TABLE, Load data using streaming tables in Databricks SQL.
