Professional for Requirements Engineering. Foundation Level Valid Test Practice

CPRE-FL_Syll_3.0 guide materials really attach great importance to the interests of users. In the process of development, it also constantly considers the different needs of users. According to your situation, our CPRE-FL_Syll_3.0 study materials will tailor-make different materials for you. And the content of the CPRE-FL_Syll_3.0 Exam Questions is always the latest information contained for our technicals update the questions and answers in the first time.

ISQI IREB Certified Professional for Requirements Engineering. Foundation Level Sample Questions (Q81-Q86):

NEW QUESTION # 81

Choose the correct sentence regarding phrase templates for requirements:

- A. "May" is used for requirements that are strongly desired, but not mandatory.
- B. Even requirements using "should" are mandatory.
- C. "Shall" is used for mandatory requirements.
- D. "Will" is used for the strongest form of mandatory requirements.

Answer: C

NEW QUESTION # 82

Regarding the influencing factors to consider when configuring an RE process, it is correct to say that:

- A. Experienced requirements engineers do better with a lightweight RE process.
- B. A tight budget requires a robust RE process to compensate.
- C. All the other options are wrong.
- D. Complexity requires a more loose, informal RE process to be dealt with.

Answer: C

NEW QUESTION # 83

Choose the right option regarding stakeholders.

- A. External users are relatively easy to contact through formal channels.
- B. The more stakeholders you have found, the harder it becomes to find new ones.
- C. Stakeholders in the wider environment (Alexander's onion model) are still relevant.
- D. The user is always the most important stakeholder.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Alexander's onion model distinguishes layers of stakeholders: core (system), involved, affected, and the wider environment.

Stakeholders in the wider environment-such as regulators, industry bodies or neighbouring systems-can still influence requirements via regulations, standards or interfaces; they remain relevant for RE, so C is correct. Users are not always the dominant stakeholder; for embedded or technical subsystems, other roles may outweigh them, so A is false. External users are often numerous, anonymous and hard to reach formally, making B wrong. Early stakeholder analysis often exhibits a snowball effect: once some are found, they point to others, so D is also incorrect.

NEW QUESTION # 84

Which of the following perspectives is the most important when selecting a tool to support the RE process?

- A. Process perspective
- B. Project perspective
- C. All the other options are wrong
