OGEA-101 New Braindumps Sheet & Authorized OGEA-101 Certification

VerifiedDumps is a website to meet the needs of many customers. Some people who used our simulation test software to pass the IT certification exam to become a VerifiedDumps repeat customers. VerifiedDumps can provide the leading The Open Group training techniques to help you pass The Open Group Certification OGEA-101 Exam.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q123-Q128):

NEW QUESTION # 123

Complete the sentence. The purpose of creating a set of Architecture Principles is to

- A. enable an understanding of the culture and values of the enterprise
- B. agree a contract between sponsoring organization and the architects
- C. document likely impacts
- D. establish a common understanding of how to control the business in pursuit of strategic goals

Answer: D

Explanation:

In TOGAF, Architecture Principles are created to provide a clear and stable foundation for architecture work across the enterprise. Their purpose is to guide decision-making and establish a shared understanding of the rules and boundaries within which architecture and business change should take place. The best answer is A because Architecture Principles are intended to create a common basis for governance and direction, ensuring that architecture supports the control and evolution of the enterprise in line with its strategic goals.

Option B is incorrect because documenting likely impacts belongs more appropriately to the Implications section of an individual principle, not to the overall purpose of creating a set of principles. Option C is also incorrect because while principles may reflect aspects of enterprise culture and values, that is not their main purpose. Option D refers more closely to an Architecture Contract, which is a formal agreement between sponsors and architects or implementation organizations.

A defined set of principles helps ensure consistency, improves governance, supports compliance, and aligns architecture decisions with business direction. In this way, principles act as a decision framework for the enterprise. Therefore, the correct completion of the sentence is establish a common understanding of how to control the business in pursuit of strategic goals.

NEW QUESTION # 124

Which of the following matches the Architecture Capability component of the Architecture Repository?

- * A record of governance activity across the enterprise
 - * The architectural representation of assets in use or planned
 - * The parameters, structures, and processes to support governance of the Repository
 - * The standards with which new architectures must comply
 - * The authorized change requests from the Architecture Board
-
- A. The parameters, structures, and processes to support governance of the Repository.
 - B. The architectural representation of assets in use or planned.
 - C. A record of governance activity across the enterprise.
 - D. The standards with which new architectures must comply.

Answer: A

Explanation:

Within the TOGAF Architecture Repository, the Architecture Capability component contains the organizational and governance support needed to operate the repository and the architecture function effectively. This includes the parameters, structures, roles, processes, and control mechanisms that allow the repository and architecture practice to be governed in a disciplined way. Because of that, option D is the correct match.

The other descriptions relate to different repository components. "The architectural representation of assets in use or planned" belongs more closely to the Landscape Repository, which captures current and planned architecture assets. "The standards with which new architectures must comply" corresponds to the Standards Information Base, where relevant standards and rules are maintained. "A record of governance activity across the enterprise" aligns with the Governance Log, which tracks governance-related actions and decisions.

"Authorized change requests from the Architecture Board" would be treated as governance-controlled change information rather than the Architecture Capability itself.

TOGAF distinguishes the Architecture Capability from the content held in the repository because capability is about how architecture is governed and supported, not only what architecture content is stored. Therefore, the correct answer is the parameters, structures, and processes to support governance of the Repository, which is option D.

NEW QUESTION # 125

Complete the sentence Business Transformation Readiness Assessment is _____.

- A. widely used to validate an architecture that is being developed
- B. a joint effort between corporate staff lines of business and IT planners
- C. to ensure the active support of powerful stakeholders
- D. a way to put building blocks into context thereby supporting re-usable solutions

Answer: B

Explanation:

Business Transformation Readiness Assessment is a joint effort between corporate staff lines of business and IT planners to evaluate

the readiness of the organization to undergo change. It involves assessing factors such as vision, commitment, capacity, capability, culture, and motivation that may influence the success of a business transformation initiative. Reference: The TOGAF Standard | The Open Group Website, Section 3.3.2 Business Transformation Readiness Assessment.

NEW QUESTION # 126

What is an objective of the ADM Preliminary Phase?

- A. To create the initial version of the Architecture Roadmap
- **B. To select and implement tools to support the Architecture Capability**
- C. To develop a vision of the business value to be delivered by the proposed enterprise architecture
- D. To obtain approval for the Statement of Architecture Work

Answer: B

Explanation:

The Preliminary Phase is the preparatory phase of the Architecture Development Method (ADM) cycle, which sets the context and direction for the architecture work. One of the objectives of this phase is to select and implement tools to support the Architecture Capability, which is the ability of an organization to perform enterprise architecture effectively and efficiently. Tools can include software applications, methods, techniques, standards, and frameworks that assist the architecture development and governance processes. The selection and implementation of tools should be based on the requirements and constraints of the organization, and the alignment with the Architecture Principles and the Architecture Vision³ Reference: 3: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 6: Preliminary Phase : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 45: Establishing and Maintaining an Enterprise Architecture Capability : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 46: Tools for Architecture Development

NEW QUESTION # 127

Complete the sentence The TOGAF standard covers the development of four architecture domains. Business. Data, Technology and _____.

- A. Capability
- **B. Application**
- C. Segment
- D. Transition

Answer: B

Explanation:

The TOGAF standard covers the development of four architecture domains: Business, Data, Technology and Application. These domains represent different aspects of an enterprise's architecture and provide a consistent way of describing, analyzing, and designing them. Reference: The TOGAF Standard | The Open Group Website, Section 2.2 Architecture Development Method (ADM).

NEW QUESTION # 128

.....
