

Pass-Sure SOA-C03 Interactive Questions - Updated Source of SOA-C03 Exam

2026 Latest PDFBraindumps SOA-C03 PDF Dumps and SOA-C03 Exam Engine Free Share: <https://drive.google.com/open?id=1PWmt2EzRiMEOBj8u477e2kyvIWWX1joO>

We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our SOA-C03 practice materials for your reference. So our SOA-C03 training materials are triumph of their endeavor. By resorting to our SOA-C03 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our SOA-C03 actual tests, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our materials.

The key trait of our product is that we keep pace with the changes of syllabus and the latest circumstance to revise and update our SOA-C03 study materials, and we are available for one-year free updating to assure you of the reliability of our service. Our company has established a long-term partnership with those who have purchased our SOA-C03 Exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam.

>> SOA-C03 Interactive Questions <<

SOA-C03 Latest Test Discount & Latest Real SOA-C03 Exam

It is quite clear that let the facts speak for themselves is more convincing than any word, therefore, we have prepared free demo in this website for our customers to have a taste of the SOA-C03 test torrent compiled by our company. You will understand the reason why we are so confident to say that the SOA-C03 Exam Torrent compiled by our company is the top-notch SOA-C03 exam torrent for you to prepare for the exam. You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our SOA-C03 exam materials will never let you down.

Amazon AWS Certified CloudOps Engineer - Associate Sample Questions (Q44-Q49):

NEW QUESTION # 44

A CloudOps engineer is preparing to deploy an application to Amazon EC2 instances that are in an Auto Scaling group. The application requires dependencies to be installed. Application updates are issued weekly.

The CloudOps engineer needs to implement a solution to incorporate the application updates on a regular basis. The solution also must conduct a vulnerability scan during Amazon Machine Image (AMI) creation.

What is the MOST operationally efficient solution that meets these requirements?

- A. Invoke the EC2 CreateImage API operation by using an Amazon EventBridge scheduled rule.
- B. Create a script that uses Packer. Schedule a cron job to run the script.
- C. Install the application and its dependencies on an EC2 instance. Create an AMI of the EC2 instance.

- **D. Use EC2 Image Builder with a custom recipe to install the application and its dependencies.**

Answer: D

Explanation:

EC2 Image Builder is a managed service that automates AMI creation on a schedule, including installing dependencies, applying weekly application updates, and running steps such as vulnerability scans as part of the image build pipeline. It provides versioning, automated builds, and integration with scanners via components, giving a highly automated and operationally efficient solution compared to manual scripts or ad hoc AMI creation.

NEW QUESTION # 45

A company stores critical files in an Amazon S3 bucket in the us-east-1 AWS Region. To comply with disaster recovery requirements, all new objects in the bucket must automatically replicate to a bucket in the us-west-2 Region.

Which solution will meet this requirement with the LEAST operational overhead?

- A. Enable Cross-Origin Resource Sharing (CORS) on both the us-east-1 bucket and the us-west-2 bucket.
- B. Create an AWS Lambda function that copies the object to the destination bucket. Configure an Amazon EventBridge rule to run the Lambda function for each object that is created.
- **C. Enable Cross-Region Replication (CRR) on the source bucket. Specify the destination bucket in the us-west-2 Region. Enable versioning on the source bucket.**
- D. Enable S3 Lifecycle policies to transition objects to a different storage class in the us-west-2 Region.

Answer: C

Explanation:

Amazon S3 Cross-Region Replication is the managed feature for automatically replicating newly created objects from a source bucket in one Region to a destination bucket in another Region. This is the correct disaster recovery pattern because replication is handled by S3 without custom code or scheduled copy jobs.

Versioning is required for replication, and in a complete production configuration, versioning must be enabled on both the source and destination buckets. Option A is therefore the best answer, even though the wording mentions only source-bucket versioning. CORS controls browser cross-origin access and has nothing to do with disaster recovery replication. Lambda and EventBridge can copy objects, but this creates more operational overhead and error handling. S3 Lifecycle policies transition or expire objects; they do not replicate new objects across Regions.

NEW QUESTION # 46

A company has a workload that is sending log data to Amazon CloudWatch Logs. One of the fields includes a measure of application latency. A CloudOps engineer needs to monitor the p90 statistic of this field over time.

What should the CloudOps engineer do to meet this requirement?

- A. Create an Amazon CloudWatch Contributor Insights rule on the log data.
- **B. Create a metric filter on the log data.**
- C. Create a subscription filter on the log data.
- D. Create an Amazon CloudWatch Application Insights rule for the workload.

Answer: B

Explanation:

To analyze and visualize custom statistics such as the p90 latency (90th percentile), a CloudWatch metric must be generated from the log data. The correct method is to create a metric filter that extracts the latency value from each log event and publishes it as a CloudWatch metric. Once the metric is published, percentile statistics (p90, p95, etc.) can be displayed in CloudWatch dashboards or alarms.

AWS documentation states:

"You can use metric filters to extract numerical fields from log events and publish them as metrics in CloudWatch. CloudWatch supports percentile statistics such as p90 and p95 for these metrics." Contributor Insights (Option A) is for analyzing frequent contributors, not numeric distributions. Subscription filters (Option C) are used for log streaming, and Application Insights (Option D) provides monitoring of application health but not custom p90 statistics. Hence, Option B is the CloudOps-aligned, minimal-overhead solution for percentile latency monitoring.

NEW QUESTION # 47

A company uses an organization in AWS Organizations to manage multiple AWS accounts. The company needs to send specific events from all the accounts in the organization to a new receiver account, where an AWS Lambda function will process the events. A CloudOps engineer configures Amazon EventBridge to route events to a target event bus in the us-west-2 Region in the receiver account. The CloudOps engineer creates rules in both the sender and receiver accounts that match the specified events. The rules do not specify an account parameter in the event pattern. IAM roles are created in the sender accounts to allow PutEvents actions on the target event bus.

However, the first test events from the us-east-1 Region are not processed by the Lambda function in the receiving account. What is the likely reason the events are not processed?

- A. The target Lambda function is in a different AWS Region, which is not supported by EventBridge.
- B. Interface VPC endpoints for EventBridge are required in the sender accounts and receiver accounts.
- C. The resource-based policy on the target event bus must be modified to allow PutEvents API calls from the sender accounts.
- D. The rule in the receiving account must specify {"account": ["sender-account-id"]} in its event pattern and must include the receiving account ID.

Answer: C

Explanation:

Per the AWS Cloud Operations and EventBridge documentation, when events are sent across AWS accounts - particularly from multiple accounts in an AWS Organization - the target event bus in the receiver account must include a resource-based policy that explicitly allows events:PutEvents API calls from the sender accounts or the organization ID.

Even if the sender accounts have IAM permissions to call PutEvents, the receiving event bus must trust those accounts via a resource policy. Without this configuration, EventBridge automatically rejects incoming cross-account events, and those events never reach the target Lambda function for processing.

AWS guidance states that "Cross-account event delivery requires a resource-based policy on the event bus that grants permissions to the source accounts or organization." The policy can include either individual AWS account IDs or the organization's root ID.

In this scenario, because the events originate from multiple accounts and there is no resource policy on the target event bus to authorize those sender accounts, the events are not delivered.

Therefore, the correct cause is C - the resource-based policy on the target event bus must be modified to allow PutEvents API calls from the sender accounts.

NEW QUESTION # 48

A company with millions of subscribers needs to automatically send notifications every Saturday. The company already uses Amazon SNS to send messages but has historically sent them manually.

Which solution will meet these requirements in the MOST operationally efficient way?

- A. Create an SNS subscription to a message fanout that sends notifications to subscribers every Saturday.
- B. Create a rule in Amazon EventBridge that triggers every Saturday. Configure the rule to publish a notification to an SNS topic.
- C. Launch a new Amazon EC2 instance. Configure a cron job to use the AWS SDK to send an SNS notification to subscribers every Saturday.
- D. Use AWS Step Functions scheduling to run a step every Saturday. Configure the step to publish a message to an SNS topic.

Answer: B

Explanation:

Per the AWS Cloud Operations and Event Management documentation, Amazon EventBridge provides native scheduling capabilities that can trigger events at defined intervals-such as weekly, daily, or cron- based schedules.

Creating an EventBridge rule that runs every Saturday and publishes a message to an SNS topic fully automates the notification process without maintaining servers or manual jobs. This approach is serverless, highly reliable, and fully managed by AWS.

By contrast:

* EC2 cron jobs (Option A) require instance management, patching, and cost overhead.

* SNS subscriptions (Option C) handle message delivery, not scheduling.

* Step Functions (Option D) are designed for complex workflows, not simple scheduled triggers.

Thus, Option B provides the most operationally efficient CloudOps solution by integrating EventBridge scheduled events with SNS topics for automated, recurring notifications.

NEW QUESTION # 49

.....

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the SOA-C03 study materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our SOA-C03 Study Materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

SOA-C03 Latest Test Discount: https://www.pdfbraindumps.com/SOA-C03_valid-braindumps.html

But after they fail exam once, they find they need SOA-C03 exam dumps as study guide so that they have a learning direction, If you still have any misgivings, please just take it easy, we can understand you completely, but please enter into our website and download the free demo of Amazon SOA-C03 exam guide first before you make a decision, Amazon SOA-C03 Interactive Questions Unbelievable learning experience.

Most people don't realize it, but they are SOA-C03 Interactive Questions signing up forever when they subscribe to a magazine, While not all small businesses need them, all small businesses should educate Latest Real SOA-C03 Exam themselves on the space and experiment with using one or two of the products.

Quiz Accurate SOA-C03 - AWS Certified CloudOps Engineer - Associate Interactive Questions

But after they fail exam once, they find they need SOA-C03 Exam Dumps as study guide so that they have a learning direction, If you still have any misgivings, please just take it easy, we can understand you completely, but please enter into our website and download the free demo of Amazon SOA-C03 exam guide first before you make a decision.

Unbelievable learning experience, All those SOA-C03 Latest Test Discount traits are exactly what our AWS Certified CloudOps Engineer - Associate updated torrent is, The important items can be imprinted on examinees' mind by the practice SOA-C03 system of SOFT that knocks out dull pure memory style which is dull and becomes dated.
