IREB Certified Professional for Requirements Engineering. Foundation Level certification exam is based on the International Requirements Engineering Board (IREB) syllabus and is administered by the International Software Quality Institute (ISQI).

ISQI IREB Certified Professional for Requirements Engineering. Foundation Level Sample Questions (Q167-Q172):

NEW QUESTION # 167

Which of the following criteria favour adopting a customer-specific RE process? (Select 2 answers.)

- A. The developing organization plans to sell the system as a product on a market.
- B. Requirements must match envisaged needs of broad user segments.
- **C. The system will be used mainly by the organization that orders and pays for it.**
- **D. The customer wants a requirements specification that can serve as a contract.**
- E. Prospective users are not individually identifiable.

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A customer-specific process is appropriate when a single organization commissions a system primarily for its own use. In this context, a detailed specification often serves as a contractual basis between customer and supplier, making A a strong indicator. Likewise, if the principal users are within the ordering organization, tailoring requirements directly to that customer's needs (B) is typical. When users are anonymous or broad market segments are targeted (C, D, E), a market-oriented RE process-focusing on generic personas and segments-is recommended instead. Thus, A and B favour a customer-specific approach.

NEW QUESTION # 168

Choose the correct option regarding elicitation techniques.

- A. All the other options are wrong.
- B. During a brainstorm, quality prevails over quantity.
- **C. In system archaeology, requirements are extracted from existing systems by analyzing their documentation or implementation.**
- D. Reuse of requirements is not an elicitation technique.

Answer: C

NEW QUESTION # 169

Which of the following elements are elements of a state diagram and which are not? Please indicate true or false. (1 Point)

True	False	
A	B	Event
C	D	Initial state
E	F	State Transition
G	H	Interaction
H	I	ISOTI

Answer:

Explanation:

A, C, E, H, J

NEW QUESTION # 170

You wish to define technically relevant terms in a project. Indicate true or false for the following statements in order to complete the sentence beginning "The definition of technically relevant terms ..." (2 Points)

True	False	
A	B	... is a desirable, but not strictly necessary component of requirement documents.
C	D	... Must establish for technical terms their meaning for the system to be specified.
E	F	... Must be cross-project in nature.
G	H	... Is always made more understandable by means of additional examples and counterexamples.

Answer:

Explanation:

B, C, F, G

NEW QUESTION # 171

Which of the following is a disadvantage of template-based work products?

- A. Requirements do not look uniform.
- B. Not-included aspects are likely to be omitted.
- C. The structure is not reusable.
- D. There are no real disadvantages.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Template-based documents and forms enforce a common structure, making requirements more uniform (contradicting A) and inherently reusable across projects (contradicting B). However, they have notable downsides: people may focus on filling the template rather than thinking deeply about content, and any aspect not explicitly represented by a field in the template tends to be overlooked. This can lead to missing important information. Therefore option D correctly captures a documented disadvantage; C is obviously false because the syllabus explicitly lists cons.
