## Adobe Target Architect Master Sample Questions (Q91-Q96):

### NEW QUESTION # 91

An eCommerce website uses Adobe Target Recommendations. The modules on the website consistently recommend popular products that are out of stock despite having a filter set correctly that excludes products with zero inventory.

- There is currently a custom CSV product feed setup that is ingested on a daily basis and includes inventory data correct at midnight every day.
- The website has a live inventory value displayed on each product page, which is also included in the data layer.

Which option should the client perform to ensure that products are not recommended that have zero inventory on as close to a real-time basis as possible?

- A. Change the product feed to use Analytics Classifications instead of the CSV product feed.
- B. Create a Collection of items that regularly sell out quickly and apply this collection to the criteria of each Recommendations activity.
- C. Set the entity.inventory Target request (mbox) parameter value to the current live inventory value from the data layer on the Target request that is fired on the product page.

- D. Change the product feed to use their Google Product feed data instead of the CSV product feed currently implemented. Set this to ingest at the same interval as the custom CSV product feed.
