ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q238-Q243):

NEW QUESTION # 238

When creating an application through the Guided Application Creator, which of the following is NOT an option for creating a table?

- A. Create table from scratch
- **B. Create table from template**
- C. Upload spreadsheet
- D. Extend a table

Answer: B

Explanation:

Create table from template is not an option for creating a table through the Guided Application Creator. The other options are available for creating a table in the app. Upload spreadsheet allows you to import data from an Excel file and create a table based on the spreadsheet columns and rows. Extend a table allows you to create a child table that inherits fields and behaviors from a parent

table. Create table from scratch allows you to define your own fields and data types for a new table. Reference: Create tables <https://docs.servicenow.com/bundle/tokyo-application-development/page/build/guided-app-creator/concept/gac-tables.html>

NEW QUESTION # 239

Which items are valid UI Action types in ServiceNow?

Choose 3 answers

- A. Form Button
- B. Record Navigation Button
- C. List Banner Button
- D. Form Choice
- E. Workflow Action
- F. List Choice

Answer: A,B,C

Explanation:

In ServiceNow, UI Actions are elements such as buttons, links, and context menu items that allow users to perform actions on records or lists. The three valid UI Action types are:

1. List Banner Button (Option A)

* Description: A button that appears in the list view header, allowing users to trigger an action affecting multiple records at once.

* Example: A "Bulk Approve" button that processes selected records.

2. Form Button (Option B)

* Description: A button that appears on a form, allowing users to trigger actions related to the current record.

* Example: A "Submit for Approval" button on an incident form.

3. Record Navigation Button (Option D)

* Description: A button that helps users navigate between related records.

* Example: A "Go to Parent Record" button that redirects users to a linked record.

Incorrect Options:

* Form Choice (Option C):

* Not a UI Action type. Choices are typically used in choice fields (dropdowns) rather than UI actions.

* List Choice (Option E):

* Not a valid UI Action type. Similar to "Form Choice," it pertains to field options rather than UI elements.

* Workflow Action (Option F):

* Workflows are process automation tools, not UI Actions. They are not directly related to buttons or links that users interact with.

Reference:For more details, see the official ServiceNow documentation on UI Actions.

NEW QUESTION # 240

Which script types execute on the server? (Choose three.)

- A. Business Rule
- B. Client Scripts
- C. Scheduled Jobs
- D. Script Actions
- E. UI Policies

Answer: A,C,D

Explanation:

https://docs.servicenow.com/bundle/tokyo-application-development/page/script/server-scripting/concept/c_Serve

NEW QUESTION # 241

There is a basic strategy when creating a Utils Script Include. Identify the step that does not belong.

- A. Create a class
- B. Script the function(s)
- C. Identify the table

- D. Create a prototype object from the new class

Answer: C

Explanation:

The step that does not belong when creating a Utils Script Include is identifying the table. A Script Include is a server-side script that can contain one or more classes or functions that can be reused by other scripts. It does not depend on a specific table, but can access any table through GlideRecord or other APIs. The other steps are part of creating a Script Include class and its prototype object. Reference: [ServiceNow Docs - Script Includes], [ServiceNow Docs - GlideRecord API]

NEW QUESTION # 242

What is a Module?

- A. A way of helping users quickly access information and services by filtering the items in the Application Navigator
- B. A group of menus, or pages, providing related information and functionality to end-users
- C. A web-based way of providing software to end-users
- D. The functionality within an application menu such as opening a page in the content frame or a separate tab or window

Answer: D

Explanation:

https://docs.servicenow.com/bundle/rome-platform-user-interface/page/administer/navigation-and-ui/task/t_CreateAModule.html A module is the functionality within an application menu such as opening a page in the content frame or a separate tab or window. For example, Open is a module under the Problem application menu that opens a list of problem records. Modules are the second level navigation options for applications.
