Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q23-Q28):

NEW QUESTION # 23

An administrator is issuing the following command on a node trying to join a FortiSOAR cluster as a standby: `csadm ha join-cluster -status active -role secondary --primary-node 10.0.1.160` The node fails to join the cluster. What is the issue?

- **A. The status value should be passive.**
- B. The role value should be worker.
- C. The primary node needs to be resolvable via FQDN.
- D. The IP address should be for secondary-node Instead of primary-node.

Answer: A

Explanation:

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup. In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

NEW QUESTION # 24

Which two statements about FortiSOAR virtual instance deployment requirements are true? (Choose two.)

- A. While memory and storage can be added based on requirements, charges are required for every vCPU that is added to the FortiSOAR VM.
- B. There are size limits for the records database, but no charges or fees for storing months or years worth of data.
- **C. FortiSOAR Cloud is a subscription service that allows you to deploy an instance hosted on FortiCloud.**
- **D. FortiSOAR is supported on VMWare ESXi and Amazon Web Services (AWS).**

Answer: C,D

Explanation:

FortiSOAR offers flexibility in deployment environments, including FortiSOAR Cloud, which is a subscription service that enables hosting on FortiCloud. This provides cloud-hosted management with scalable resources. Additionally, FortiSOAR supports deployment on VMware ESXi and Amazon Web Services (AWS), allowing organizations to choose based on their infrastructure preferences. This flexibility ensures that FortiSOAR can be integrated into various IT environments depending on business needs.

NEW QUESTION # 25

What are two use cases for configuring a FortiSOAR HA cluster?
(Choose two.)

- **A. Scaling**
- B. Multi-tenancy
- C. Data externalization
- **D. Disaster recovery**

Answer: A,D

NEW QUESTION # 26

What two permissions must you assign to a user to allow the purge of audit logs for all users? (Choose two answers)

- A. Delete permission on the People module
- B. Delete permission on the Audit Log Activities module
- C. Delete permission on the Users module
- D. Delete permission on the Security module

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation From FortiSOAR 7.3 Exact Extract study guide:

According to the FortiSOAR 7.3 Administration Guide under the "Audit Logs" and "Role-Based Access Control (RBAC)" sections, managing the lifecycle of system logs requires elevated administrative privileges.

To perform a manual purge of audit logs, the system validates permissions across two specific areas:

* Audit Log Activities Module: The user must have Delete permissions on this specific module because it is the repository where the actual log records are stored. Without "Delete" rights here, the application cannot remove the database entries.

* Security Module: Because the purging of audit logs is a sensitive security operation that affects the system's accountability trail, FortiSOAR requires the Delete permission on the Security module. This acts as a secondary administrative guardrail to ensure only authorized security administrators can permanently remove audit trails.

Permissions on the People or Users modules (Options C and D) are used for managing user profiles and account attributes, but they do not grant the authority to manipulate system-level audit databases.

NEW QUESTION # 27

When deleting a user account on FortiSOAR, you must enter the user ID in which file on FortiSOAR?

- A. userDelete.txt.
- B. scripts
- C. usersToDelete.txt
- D. config.yml

Answer: C

Explanation:

When deleting a user account in FortiSOAR, the user ID must be entered into the usersToDelete.txt file. This file is specifically used to list users that are marked for deletion. Once the user IDs are listed in this file, the system can process the deletion of these accounts as part of its user management operations. This method ensures that only specified users are deleted, as referenced in FortiSOAR's administrative controls.
