Alright, I'm glad the previous breakdown was helpful. To further deepen your preparation for the 300-715 ISE exam, let's explore some intricacies and aspects often overlooked but crucial for both the exam and real-world Cisco ISE operations.

Deeper Dive into Cisco ISE 300-715 Preparation

Expanding on Chapter 1: Fundamentals of Cisco Identity Services Engine (ISE)

Nuances of ISE Architecture and Components

- **Extended Understanding of Node Roles:**
 - **Admin Node (ADMIN):** Beyond management functions, remember that the **Primary Admin Node (PAN)** serves as the central database repository; all configuration changes are first written to the PAN and then replicated to other nodes. In an HA setup, the **Secondary Admin Node (SAN)** acts as a hot standby, taking over the PAN role in case of a failure.
 - **Policy Service Node (PSN):** Pay attention to Session Services on the PSN, which handle RADIUS requests, profiling, Posture, and other policies. Remember that PSNs **cache policies** from the ADMIN node.
 - **Monitoring Node (MNT):** The **Log Collector** on the MNT aggregates all operational data. It's crucial to configure **Data Purging** on the MNT to prevent disk overflow, and to understand how this impacts historical reports.
 - **pxGrid Node:** This isn't just an update/package node; it's a **context broker**. It provides a standardized protocol (pxGrid) for exchanging data between ISE and other solutions like Cisco Firepower (for **TrustSec, Threat Containment**), Stealthwatch, Splunk, and Cisco DNA Center.
- **Deployment Details (Deployment Models):**
 - **Small, Medium, Large Deployments:** Understand Cisco's recommended persona distribution based on organization size. For example, large networks may use **dedicated PSNs** (e.g., exclusively for 802.1X, guest access, or Posture) and separate nodes for pxGrid.
 - **Hardware vs. Virtual:** Know the **resource requirements** (CPU, RAM, Storage) for various ISE appliance models (e.g., 9K-3513, 9K-3995) and their virtual machine equivalents.

Deep Dive into Licensing

- **Licensing Stacks:** Remember that **Base, Plus, and Apex** licenses are **cumulative**. This means that to use Apex features, you also need Base and Plus functionalities.
- **Smart Licensing:** Modern ISE versions use Smart Licensing, which simplifies license management through the **Cisco Smart Software Manager (CSSM)**. Understand how ISE registers with CSSM and obtains licenses.
- **DNA Advantage / Premier:** If the exam mentions **DNA Center**, know that these licenses include corresponding ISE features and simplify policy deployment through DNA Center.

Additional Aspects of Basic ISE Parameter Configuration

- **Certificates:**

- C. Use the ip access-group webauth in command.
- D. Set the NAC State option to RADIUS NAC.

Answer: B

NEW QUESTION # 407

A network engineer must enforce access control using special tags, without re-engineering the network design. Which feature should be configured to achieve this in a scalable manner?

- A. RBAC
- B. dACL
- C. VLAN

- D. SGT

Answer: D

NEW QUESTION # 408

An engineer is deploying a new Cisco ISE environment for a company. The company wants the deployment to use TACACS+. The engineer verifies that Cisco ISE has a Device Administration license. What must be configured to enable TACACS+ operations?

- A. Device Administration Deployment settings
- B. Device Admin Policy Sets settings
- C. Device Admin service
- D. Device Administration Work Center

Answer: C

Explanation:

The Device Admin service must be explicitly enabled on the Cisco ISE node to activate TACACS+ functionality. Even with a Device Administration license installed, TACACS+ operations will not run until this service is turned on under the node's service settings.
