Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q55-Q60):

NEW QUESTION # 55
In the vi editor, which of the following commands will delete the current line at the cursor and the
16 lines following it (17 lines total)?

Answer:

Explanation:
17dd

NEW QUESTION # 56
Which of the following commands updates the linker cache of shared libraries?

- A. lddconfig
- B. ldconfig
- C. mkldconfig
- D. mkcache
- E. soconfig

Answer: B

Explanation:
The command that updates the linker cache of shared libraries is ldconfig. This command creates, updates, and removes the necessary links and cache for the run-time linker, ld.so, to the most recent shared libraries found in the specified directories. To add a new library directory to the cache, you need to edit the /etc/ld.so.
conf file and rerun ldconfig. You can use the -p option to print the current cache contents1.
The other commands are either invalid or unrelated to the linker cache. mkcache, soconfig, and mkldconfig are not standard Linux commands. lddconfig is a typo for ldd, which is a command that prints the shared libraries required by a program2.

NEW QUESTION # 57
What does the command mount -a do?

- A. It mounts all user mountable filesystems for the current user.
- B. It shows all mounted filesystems.
- C. It mounts all filesystems listed in /etc/fstab which have the option noauto set.
- D. It mounts all available filesystems onto the current directory.
- E. It mounts all filesystems listed in /etc/fstab which have the option auto set.

Answer: E

Explanation:
Explanation
The command mount -a mounts all filesystems that are listed in the file /etc/fstab and have the option auto set.
The option auto means that the filesystem can be mounted automatically by the mount -a command or at boot time. The option noauto means that the filesystem can only be mounted explicitly by the mount command with the device or mount point specified12.
The file /etc/fstab contains information about the filesystems that are known to the system and how they can be mounted3. The command mount -a is useful for mounting all the filesystems that are needed by the system after a change in /etc/fstab or after a reboot4. References: 1:

NEW QUESTION # 58
Which option to the yum command will update the entire system? (Specify ONLY the option name without any additional parameters.)

Answer:

Explanation:
* update
* upgrade
update/upgrade
Explanation

The yum command is a tool for managing software packages on Red Hat Enterprise Linux and other RPM-based systems. The yum update option will update the entire system by checking the versions of the installed packages and installing the latest available versions from the repositories. The yum upgrade option will do the same, but it will also remove any obsolete packages that are no longer needed by the system. Both options will prompt the user to confirm before proceeding with the update or upgrade process. References:
