Free PDF Quiz 2026 Fantastic Cisco 300-535: Automating and Programming Cisco Collaboration Solutions Valid Exam Bootcamp

We Promise we will very happy to answer your question on our 300-535 exam braindumps with more patience and enthusiasm and try our utmost to help you out of some troubles. So don't hesitate to buy our {Examcode} study materials, we will give you the high-quality product and professional customer services. As long as you study with our 300-535 learning guide, you will be sure to get your dreaming certification.

Cisco 300-535 certification exam is a valuable credential for IT professionals who want to develop their automation and programming skills in the field of Cisco Collaboration solutions. It covers a range of topics and requires a deep understanding of collaboration APIs, network automation, software development, and collaboration platforms. Passing 300-535 Exam demonstrates a candidate's competence in these areas and can open up new career opportunities.

Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which data format should be used to serialize structured data in the most compact way?

- A. protobufs
- B. JSON
- C. YAML
- D. XML

Answer: C

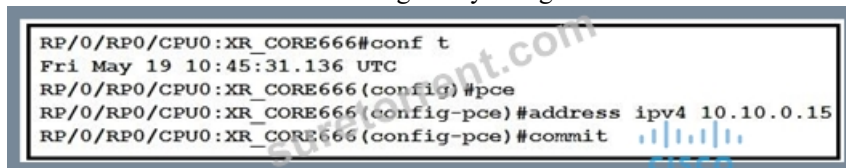

Explanation:

Section: 3.0 Network Device Programmability

Explanation/Reference: <https://www.sitepoint.com/data-serialization-comparison-json-yaml-bson-messagepack/>

NEW QUESTION # 31

Refer to the exhibit. XTC has been configured by an engineer. What does the IPv4 address represent on the snippet?

```
RP/0/RP0/CPU0:XR_CORE666#conf t
Fri May 19 10:45:31.136 UTC
RP/0/RP0/CPU0:XR_CORE666(config)#pce
RP/0/RP0/CPU0:XR_CORE666(config-pce)#address ipv4 10.10.0.15
RP/0/RP0/CPU0:XR_CORE666(config-pce)#commit
```

- A. local address of the router on which it listens for PCEP
- B. destination address of the router on which it listens for PCEP
- C. configured for the local peer for state synchronization
- D. configured for the remote peer for state synchronization

Answer: A

NEW QUESTION # 32

Refer to the exhibit.

```
#!/usr/bin/env python

from ydk.models.openconfig.openconfig_interfaces import Interfaces
from ydk.errors import YError

def read_interfaces(crud_service, provider):
    intf_f = Interfaces()

    try:
        interfaces = crud_service.read(provider, intf_f)
        for interface in interfaces.interface:
            print(interface.name)
    except YError:
        print('An error occurred.')
```

When YDK is used to interact with Cisco routers, what is the purpose of passing `intf_f` into the `crud_service.read()` method?

- A. It passes default values into the `crud_service`, which reconfigures all interfaces to their default configurations.
- B. It provides the data types of the `openconfig:interfaces` model to the router for dynamic configuration of the interfaces.
- C. It locks the interfaces from modification by other active NETCONF sessions.
- D. The `Interfaces()` class acts as a NETCONF filter, which limits the data returned to that of the `openconfig:interfaces` YANG model.

Answer: A

NEW QUESTION # 33

What is a benefit of Ansible for automating IOS XE or IOS XR platforms?

- A. It has agent support
- B. Playbooks can be written in XML format.
- C. It offers native orchestration support for Cisco platforms.
- D. It supports asynchronous orchestration.

Answer: C

Explanation:

Section: 2.0 Automation APIs and Protocols

NEW QUESTION # 34

Refer to the exhibit.

```

def configure_ip_address(interface, ip, length):
    url = BASE_URL + "/data/ietf-interfaces:interfaces/interface={i}".format(
        i = interface
    )
    data = OrderedDict(
        [
            (
                "ietf-interfaces:interface",
                OrderedDict(
                    [
                        ("name", interface),
                        ("type", "iana-if-type:ethernetCsmacd"),
                        (
                            "ietf-ip:ipv6",
                            OrderedDict(
                                [
                                    (
                                        "address",
                                        OrderedDict([("ip", ip), ("prefix-length", length)]),
                                    )
                                ]
                            )
                        )
                    ]
                )
            )
        ]
    )

    response = requests.put(
        url, auth=(USERNAME, PASSWORD), headers=HEADERS, verify=False, json=data
    )
    print(response.status_code)

configure_ip_address("GigabitEthernet2", "2001:db8:636c:6179:2063:7572:7469:7300", "64")

```

What is the effect of the script on the device?

- A. It merges the new configuration with the existing configuration on the device using RESTCONF.
- B. It replaces the entire configuration for GigabitEthernet2 on the device using RESTCONF.
- C. It compares the configuration to the device. If it matches, the device sends back an HTTP 204 status code.
- D. All interfaces except GigabitEthernet2 are reset to their default configurations.

Answer: A
