The CIS-Discovery Certification Exam covers a range of topics, including the ServiceNow Discovery architecture and components, data sources and credentials, patterns, sensors, and troubleshooting techniques. CIS-Discovery exam is designed to test the candidate's ability to configure and customize these components to ensure that the ServiceNow Discovery application delivers accurate, timely, and actionable data. Candidates must also demonstrate their knowledge of the ServiceNow Discovery application's integration with other ServiceNow applications, such as ServiceNow CMDB and ServiceNow ITOM.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q78-Q83):

NEW QUESTION # 78
What is found on the far-right section of the Pattern Designer for horizontal patterns? (Choose two.)

- A. Temporary Variables
- B. Operations
- C. CMDB Dashboard
- D. CI Attributes

Answer: A,B

Explanation:
The Pattern Designer is a graphical tool that allows users to create and edit horizontal discovery patterns. The Pattern Designer has three main sections: the left section shows the CI type and the pattern type, the middle section shows the pattern steps and the flow diagram, and the far-right section shows the details of the selected step or operation. The far-right section can display the following tabs, depending on the type of step or operation selected12:
* Operations: This tab shows the list of available operations that can be added to the pattern, such as Execute Command, Parse File, Set Parameter Value, etc. Operations are the basic building blocks of a pattern that perform specific actions on the target device or the MID Server.
* CI Attributes: This tab shows the list of attributes that can be set or updated for the CI type of the pattern, such as name, serial number, manufacturer, etc. CI attributes are used to populate the CI record in the CMDB with the information collected by the pattern.
* Temporary Variables: This tab shows the list of temporary variables that can be created or used by the pattern, such as $result, $output, $user_var, etc. Temporary variables are used to store and manipulate data within the pattern, such as the output of a command, the value of a parameter, or the result of a calculation.
* CMDB Dashboard: This tab shows the CMDB dashboard that displays the CI record and its related lists, such as relationships, identification rules, sensors, etc. The CMDB dashboard is used to preview and verify the outcome of the pattern on the CI record in the CMDB.

NEW QUESTION # 79
What CI Field can be used to identify aging Cls.
Response:

- A. Created
- B. Discovery Source
- C. Most recent discovery
- D. Updated

Answer: C

NEW QUESTION # 80
When troubleshooting discovery from a discovery status, which of the following lists will prove helpful?
(Choose 3 answers)
Response:

- A. Running Processes
- B. ECC Queue
- C. Discovery Log
- D. Devices

Answer: B,C,D

NEW QUESTION # 81
If the WMI service is not running on a host, it will prevent the discovery of which devices?

- A. Windows

- B. Storage
- C. Network
- D. Unix

Answer: A

Explanation:
The WMI service is a Windows service that enables remote management of Windows devices using the WMI protocol. The WMI service is required for Discovery to access the configuration and status information of Windows devices using WMI queries. If the WMI service is not running on a host, it will prevent the discovery of Windows devices, as Discovery will not be able to communicate with the WMI Collector or execute WMI queries on the target device123.
:
How to resolve a failure to communicate with the WMI Collector during top-down discovery - Support and Troubleshooting - Now Support Portal Windows discovery without 'domain admin' or 'local admin' privileges ? - Support and Troubleshooting - Now Support Portal Discovery - ServiceNow Elite

NEW QUESTION # 82

What are the main KPIs for CMDB Health scorecard?
Choose 3 answers

- A. Compliance
- B. Duplicates
- C. Completeness
- D. Staleness
- E. Correctness

Answer: C,D,E

Explanation:
The main Key Performance Indicators (KPIs) for the CMDB Health scorecard in ServiceNow include Correctness, Completeness, and Staleness. These KPIs are critical for assessing the overall health and quality of the CMDB. Correctness refers to the accuracy of the data in the CMDB, Completeness measures whether all required CI data is present, and Staleness indicates the freshness or timeliness of the CI data. Compliance and Duplicates, while important, are not considered main KPIs in the context of the CMDB Health scorecard.
