Salesforce Order Management Administrator Accredited Professional Sample Questions (Q86-Q91):

NEW QUESTION # 86

A customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management. Later, the customer returns one of the products. Which objects will be created in Order Management?

- A. A Change Order object and Cancel Order Object
- B. The Order Summary object and Change Order object
- C. A Cancel Order object and Return Order object
- D. A Return Order object and Change Order object

Answer: D

Explanation:

The objects that will be created in Order Management when a customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management, and then returns one of the products are:

A Return Order object. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.

A Change Order object. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc.

NEW QUESTION # 87

Order Allocation should work on Order Items in which status?

- A. Pending
- **B. Awaiting Allocation**
- C. created
- D. Ordered

Answer: B

Explanation:

Order Allocation should work on Order Items in Awaiting Allocation status. This status indicates that the Order Item has been confirmed by the customer and is ready to be allocated to a Fulfillment Order based on routing rules and inventory availability. NEW QUESTION # 88

Which two practices are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects?

- A. The types must be an exact match (i.e. String to String)
- B. The names must only contain letters and underscores
- **C. The types must match within reason**
- **D. The names must be an exact match**

Answer: C,D

Explanation:

Two practices that are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects are:

The types must match within reason. The data type of the custom attribute in Order Management must match or be compatible with the data type of the corresponding attribute in the external system, such as B2C Commerce or B2B Commerce. For example, if the attribute is a string in B2C Commerce, it must also be a string in Order Management.

The names must be an exact match. The name of the custom attribute in Order Management must be exactly the same as the name of the corresponding attribute in the external system, including capitalization and punctuation. For example, if the attribute is named "kitItem" in B2C Commerce, it must also be named "kitItem" in Order Management.

NEW QUESTION # 89

An administrator needs to send an Outbound Message to an external accounting system whenever a Fulfillment Order is created. What is the best practice to create this functionality?

- **A. Create a Flow**
- B. Create an Apex Trigger
- C. Create a Workflow Rule
- D. Create a Process Builder

Answer: A

NEW QUESTION # 90

A user is encountering an error when attempting to save an Account record. What can an administrator use to research the issue?

- A. The Problems tab within the developer console
- **B. A user trace flag and debug log on the affected user**
- C. The Chrome Dev Tools Console
- D. Lightning Logs within Setup

Answer: B

Explanation:

The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests. The administrator can use these tools to identify the root cause of the error and fix it accordingly.
