IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which two of the following can be used with Watson Pipelines?

- A. Notebooks
- B. Postgres
- C. PowerShell
- D. Db2 Big SQL
- E. Bash scripts

Answer: A,E

Explanation:

Watson Pipelines in Cloud Pak for Data support orchestration of diverse workload types including notebooks (Python or similar

interactive environments) and scripts such as Bash. These pipeline components allow integration of notebook cells or shell scripts as tasks. There is no built-in support for executing PowerShell tasks directly (unless wrapped in Bash-like containers), and Postgres is used as a data source-not a pipeline component type. While Db2 Big SQL can be invoked within a notebook or script, it is not itself a pipeline component. Therefore the supported types in pipelines are notebooks and Bash scripts.

NEW QUESTION # 78

What are the key benefits of utilizing Watson Pipelines in data processing? (Select two)

- A. Manual data entry minimization
- B. Reduction in network latency
- C. Real-time data processing
- D. Automated data transformation

Answer: C,D

NEW QUESTION # 79

Which set of DataStage features are primarily intended to improve reusability and flexibility?

- A. DataStage components, parameters, parameter sets, and environment variables.
- B. Macros, DataStage APIs, and DataStage jobs
- C. Schema drift support, Dynamic Workload Management, and ELT run mode.
- D. DataStage connectors, Qualitystage stages, and DataStage Pipeline components.

Answer: A

Explanation:

DataStage promotes modularity and reusability through the use of components such as job stages, parameters, parameter sets, and environment variables. Parameters and parameter sets allow dynamic configuration of jobs, enabling reuse across environments and reducing hardcoding. Environment variables allow users to define global job behavior across projects. These elements significantly enhance development efficiency and pipeline portability. Other features like schema drift and ELT modes support execution flexibility, but they are not primarily focused on reusability.

NEW QUESTION # 80

Which features of the IBM Knowledge Catalog service are unavailable with the Data Governance Express offering?

- A. Advanced metadata export and lineage
- B. Semantic search and metadata analysis
- C. Lineage and semantic search
- D. Data quality features in analytics projects and ETL

Answer: A

Explanation:

IBM Knowledge Catalog's Data Governance Express offering is a lightweight configuration meant for streamlined governance needs. It includes core capabilities like cataloging and basic lineage but does not support advanced metadata export or full-scale lineage visualization and tracking features. These advanced features are only available in the full IBM Knowledge Catalog service. The Express tier is designed for simpler use cases and quicker onboarding with limited governance overhead.

NEW QUESTION # 81

Which statement is true about governing data lakes in IBM Knowledge Catalog?

- A. It relies on manual processes for accessing enterprise data.
- B. It automates data discovery and provides access to enterprise data through virtualization.
- C. It increases the time and effort required for data discovery and cataloging.
- D. All data is masked with no user intervention.

Answer: B

Explanation:

Within IBM Knowledge Catalog as part of IBM Cloud Pak for Data, governing data lakes is enabled via integration with Data Virtualization. This approach supports automated data discovery, cataloging, tagging, and virtualization, allowing users to access enterprise data virtually-without physical movement. Policies and governance metadata are applied automatically to virtualized assets, enabling secure and efficient data consumption. Manual processes are not required for discovery, and data is masked selectively based on policies-not completely masked without user intervention. Thus automation and virtualization are central, making statement B correct.
