

Pass Guaranteed Quiz NSE8_812 - Fortinet NSE 8 - Written Exam (NSE8_812) Authoritative Test Answers

BONUS!!! Download part of ITexamReview NSE8_812 dumps for free: <https://drive.google.com/open?id=1q7qsaXTGd9R6M7mgqgGN0E-YNx4-I0Nn>

Do you want to earn the Fortinet NSE8_812 certification to land a well-paying job or a promotion? Prepare with NSE8_812 real exam questions to crack the test on the first try. We offer our Fortinet NSE 8 - Written Exam (NSE8_812) (NSE8_812) Dumps in the form of a real NSE8_812 Questions PDF file, a web-based Fortinet NSE8_812 Practice Questions, and NSE8_812 desktop practice test software. Now you can clear the Fortinet NSE 8 - Written Exam (NSE8_812) test in a short time without wasting time and money with actual NSE8_812 questions of ITexamReview.

Fortinet NSE8_812 certification is highly valued in the industry and is recognized as a benchmark for advanced network security skills. Professionals who pass the exam can demonstrate their ability to design and implement complex network security solutions that meet the needs of modern organizations. Fortinet NSE 8 - Written Exam (NSE8_812) certification is also a testament to the candidate's commitment to continuous learning and professional development. Passing the Fortinet NSE8_812 Exam can open up new career opportunities and increase earning potential.

NSE8_812 Learning Material: Fortinet NSE 8 - Written Exam (NSE8_812) & NSE8_812 Practice Test

When people take the subway staring blankly, you can use Pad or cell phone to see the PDF version of the NSE8_812 study materials. While others are playing games online, you can do online NSE8_812 exam questions. We are sure that as you hard as you are, you can Pass NSE8_812 Exam easily in a very short time. While others are surprised at your achievement, you might have found a better job.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q72-Q77):

NEW QUESTION # 72

You are deploying a FortiExtender (FEX) on a FortiGate-60F. The FEX will be managed by the FortiGate. You anticipate high utilization. The requirement is to minimize the overhead on the device for WAN traffic.

Which action achieves the requirement in this scenario?

- A. Add a switch between the FortiGate and FEX.
- B. Change connectivity between the FortiGate and the FortiExtender to use VLAN Mode
- C. Add a VLAN under the FEX-WAN interface on the FortiGate.

- **D. Enable CAPWAP connectivity between the FortiGate and the FortiExtender.**

Answer: D

Explanation:

The FortiExtender (FEX) is a device that provides wireless WAN connectivity for FortiGate devices by using 3G/4G/LTE cellular networks. The FEX can be managed by the FortiGate device that it connects to, or by a FortiManager device in a centralized management scenario. The FEX can use either Ethernet or CAPWAP connectivity to communicate with the FortiGate device. Ethernet connectivity means that the FEX uses a standard Ethernet connection to send and receive data packets from the FortiGate device. CAPWAP connectivity means that the FEX uses a Control And Provisioning of Wireless Access Points (CAPWAP) tunnel to encapsulate data packets and send them over an IP network to the FortiGate device. If the requirement is to minimize the overhead on the device for WAN traffic, one option is to enable CAPWAP connectivity between the FortiGate and the FEX. This option can reduce the overhead on the device by offloading some of the processing tasks from the CPU to the NP6 processor, which can handle CAPWAP traffic more efficiently than Ethernet traffic. This option can also provide more flexibility and scalability for WAN traffic by allowing multiple FEX devices to connect to a single FortiGate device over an IP network. NEW QUESTION # 73

Refer to the CLI configuration of an SSL inspection profile from a FortiGate device configured to protect a web server:

Based on the information shown, what is the expected behavior when an HTTP/2 request comes in?

- A. FortiGate will strip the ALPN header and forward the traffic.
- B. FortiGate will forward the traffic without modifying the ALPN header.
- **C. FortiGate will reject all HTTP/2 ALPN headers.**
- D. FortiGate will rewrite the ALPN header to request HTTP/1.

Answer: C

Explanation:

The supported-alpn parameter is set to http1.1 in the SSL inspection profile. This means that the FortiGate will only accept HTTP/1.1 traffic. Any HTTP/2 traffic will be rejected.

The following is the relevant documentation from Fortinet:

The supported-alpn parameter specifies the list of ALPN protocols that the FortiGate will accept. If the client requests a protocol that is not in this list, the FortiGate will reject the connection.

The default value for the supported-alpn parameter is all. This means that the FortiGate will accept any ALPN protocol that the client requests.

To reject all HTTP/2 traffic, set the supported-alpn parameter to http1.1.

NEW QUESTION # 74

Refer to the exhibit.

A customer has deployed a FortiGate 300E with virtual domains (VDOMs) enabled in the multi-VDOM mode. There are three VDOMs: Root is for management and internet access, while VDOM 1 and VDOM 2 are used for segregating internal traffic.

AccountVInk and SalesVInk are standard VDOM links in Ethernet mode.

Given the exhibit, which two statements below about VDOM behavior are correct? (Choose two.)

- A. Root VDOM is an Admin type VDOM, while VDOM 1 and VDOM 2 are Traffic type VDOMs.
- **B. You can apply OSPF routing on the VDOM link in either PPP or Ethernet mode**
- C. OSPF routing can be configured between VDOM 1 and Root VDOM without any configuration changes to AccountVInk
- D. The VDOM links are in Ethernet mode because they have IP addressed assigned on both sides.
- **E. Traffic on AccountVInk and SalesVInk will not be accelerated.**

Answer: B,E

NEW QUESTION # 75

You are creating the CLI script to be used on a new SD-WAN deployment You will have branches with a different number of

internet connections and want to be sure there is no need to change the Performance SLA configuration in case more connections are added to the branch.

The current configuration is:

□ Which configuration do you use for the Performance SLA members?

- A. current configuration already fulfills the requirement
- **B. set members all**
- C. set members 0
- D. set members any

Answer: B

Explanation:

D is correct because using set members all allows you to apply the Performance SLA configuration to all available interfaces without specifying them individually. This way, you do not need to change the configuration in case more connections are added to the branch. Reference: <https://docs.fortinet.com/document/fortigate/7.4.0/administration-guide/978793/sd-wan>
<https://docs.fortinet.com/document/fortigate/7.4.0/administration-guide/978793/sd-wan/978795/configuring-sd-wan-performance-sla>

NEW QUESTION # 76

Refer to the exhibit.

□ You have been tasked with replacing the managed switch Forti Switch 2 shown in the topology.

Which two actions are correct regarding the replacement process? (Choose two.)

- **A. After replacing the FortiSwitch unit, the automatically created trunk name does not change**
- B. MLAG-ICL will be automatically reconfigured once the new switch is connected to the FortiGate.
- C. After replacing the FortiSwitch unit, the automatically created trunk name changes.
- **D. CLAG-ICL needs to be manually reconfigured once the new switch is connected to the FortiGate**

Answer: A,D

Explanation:

* A is correct because the automatically created trunk name is based on the MAC address of the FortiSwitch unit. When the FortiSwitch unit is replaced, the MAC address will change, but the trunk name will not change.

* B is correct because CLAG-ICL is a manually configured link aggregation group. When the FortiSwitch unit is replaced, the CLAG-ICL configuration will need to be manually reconfigured on the new FortiSwitch unit.

The other options are incorrect. Option C is incorrect because the automatically created trunk name does not change when the FortiSwitch unit is replaced. Option D is incorrect because MLAG-ICL is a manually configured link aggregation group and will not be automatically reconfigured when the FortiSwitch unit is replaced.
