good computer certifications you will apply for good positions and get nice opportunities. C-SAC-2501 Braindumps materials will assist you to achieve your ideal and may even change people's life.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q18-Q23):

NEW QUESTION # 18

You want to display differences between measures in a chart. What can you use?

- A. Restricted measure
- B. Reference line
- C. Variance
- D. Threshold

Answer: C

Explanation:

To display differences between measures in a chart within SAP Analytics Cloud, you can use the Variance feature. Variance helps to highlight the differences or gaps between two data points or measures, making it easier to identify trends, outliers, or areas requiring attention in visual representations like charts.

SAP Analytics Cloud Help Documentation: Variance Analysis in Charts

SAP Analytics Cloud User Guide: Displaying Measure Differences Using Variance

NEW QUESTION # 19

What must you use to transform data in a dataset using if/then/else logic?

- A. Formula bar
- B. Transform bar
- C. Custom expression editor
- D. Calculations editor

Answer: C

Explanation:

To transform data in a dataset using if/then/else logic in SAP Analytics Cloud, you must use the Custom expression editor. This tool allows you to write complex logical conditions and perform conditional data transformations. The steps involved are:

Open the dataset you want to transform.

Navigate to the "Custom expression editor".

Write your if/then/else logic using the syntax supported by SAP Analytics Cloud. For example:

IF([Sales] > 1000, "High", "Low")

Apply the expression to the relevant column.

Validate and save your changes.

This approach allows for flexibility and precision in transforming your data based on specific conditions.

NEW QUESTION # 20

You have a live data model with two dimensions: Firstname and Lastname. Users want a single dimension in the data model that displays the dimensions as Lastname, Firstname. What must you do?

- A. Create the combined data in the source system.
- B. Create a calculated dimension in the data model.
- C. Group the Firstname and Lastname in the data model.
- D. Create a calculated dimension in the story.

Answer: B

Explanation:

To combine two dimensions, Firstname and Lastname, into a single dimension displaying as Lastname, Firstname in a live data model, you should create a calculated dimension in the data model. This calculated dimension will concatenate the two fields into one, according to the specified format. This approach allows for the creation of a new dimension that can be used across various reports and analyses within the model, maintaining the integrity of the original dimensions.

NEW QUESTION # 21

What account types use the average rate type? Note: There are 2 correct answers to this question.

- A. AST
- B. INC
- C. EXP
- D. LEQ

Answer: B,C

NEW QUESTION # 22

Which tasks can you perform in data analyzer? Note: There are 2 correct answers to this question.

- A. Filter data
- B. Create cross-calculation
- C. Drill down on data
- D. Input data

Answer: A,C

Explanation:

In Data Analyzer, users can perform various tasks to analyze their data, including filtering data and drilling down on data. Filtering allows users to narrow down the dataset to focus on specific subsets of data, enhancing the analysis's relevancy. Drilling down provides the ability to explore data at a more granular level, revealing deeper insights into the data points and trends within the larger dataset.
