Moreover, the Google Cloud Certified - Professional Cloud DevOps Engineer Exam also serves as a great stepping stone to earning advanced Google Cloud Certified - Professional Cloud DevOps Engineer Exam. Success in the Professional-Cloud-DevOps-Engineer exam is the basic requirement to get a good job. You get multiple career benefits after cracking the Google Cloud Certified - Professional Cloud DevOps Engineer Exam. These benefits include skills approval, high-paying jobs, and promotions. Read on to find more important details about the Google Professional-Cloud-DevOps-Engineer Exam Questions.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q177-Q182):

NEW QUESTION # 177

You created a Stackdriver chart for CPU utilization in a dashboard within your workspace project. You want to share the chart with your Site Reliability Engineering (SRE) team only. You want to ensure you follow the principle of least privilege. What should you do?

- A. Click "Share chart by URL" and provide the URL to the SRE team. Assign the SRE team the Dashboard Viewer IAM role in the workspace project.
- B. Share the workspace Project ID with the SRE team. Assign the SRE team the Dashboard Viewer IAM role in the workspace project.
- C. Share the workspace Project ID with the SRE team. Assign the SRE team the Monitoring Viewer IAM role in the workspace project.
- D. **Click "Share chart by URL" and provide the URL to the SRE team. Assign the SRE team the Monitoring Viewer IAM role in the workspace project.**

Answer: D

NEW QUESTION # 178

You are part of an organization that follows SRE practices and principles. You are taking over the management of a new service from the Development Team, and you conduct a Production Readiness Review (PRR). After the PRR analysis phase, you determine that the service cannot currently meet its Service Level Objectives (SLOs). You want to ensure that the service can meet its SLOs in production. What should you do next?

- A. Bring the service into production with no SLOs and build them when you have collected operational data.
- B. djust the SLO targets to be achievable by the service so you can bring it into production.
- C. Notify the development team that they will have to provide production support for the service.
- D. **Identify recommended reliability improvements to the service to be completed before handover.**

Answer: D

NEW QUESTION # 179

You are managing an application that exposes an HTTP endpoint without using a load balancer. The latency of the HTTP responses is important for the user experience. You want to understand what HTTP latencies all of your users are experiencing. You use Stackdriver Monitoring. What should you do?

- A. * In your application, create a metric with a metricKind set to METRIC_KIND_UNSPECIFIED and a valueType set to INT64.
* In Stackdriver's Metrics Explorer, use a Stacked Area graph to visualize the metric.
- B. * In your application, create a metric with a metricKind set to gauge and a valueType set to distribution.
* In Stackdriver's Metrics Explorer, use a Heatmap graph to visualize the metric.
- C. * In your application, create a metric with a metricKind set to DELTA and a valueType set to DOUBLE.
* In Stackdriver's Metrics Explorer, use a Slacked Bar graph to visualize the metric.
- D. * In your application, create a metric with a metricKind set to CUMULATIVE and a valueType set to DOUBLE.
* In Stackdriver's Metrics Explorer, use a Line graph to visualize the metric.

Answer: B

Explanation:

<https://cloud.google.com/architecture/adopting-slos/>

Latency is commonly measured as a distribution. Given a distribution, you can measure various percentiles. For example, you might measure the number of requests that are slower than the historical 99th percentile.

NEW QUESTION # 180

Your company has a Google Cloud resource hierarchy with folders for production test and development. Your cyber security team

needs to review your company's Google Cloud security posture to accelerate security issue identification and resolution. You need to centralize the logs generated by Google Cloud services from all projects only inside your production folder to allow for alerting and near-real time analysis. What should you do?

- A. Enable the Workflows API and route all the logs to Cloud Logging
- B. Create a central Cloud Monitoring workspace and attach all related projects
- C. Create an aggregated log sink associated with the production folder that uses a Pub Sub topic as the destination
- D. Create an aggregated log sink associated with the production folder that uses a Cloud Logging bucket as the destination

Answer: D

NEW QUESTION # 181

You are running an experiment to see whether your users like a new feature of a web application. Shortly after deploying the feature as a canary release, you receive a spike in the number of 500 errors sent to users, and your monitoring reports show increased latency. You want to quickly minimize the negative impact on users. What should you do first?

- A. Roll back the experimental canary release.
- B. Trace the origin of 500 errors and the root cause of increased latency.
- C. Start monitoring latency, traffic, errors, and saturation.
- D. Record data for the postmortem document of the incident.

Answer: C

NEW QUESTION # 182

.....
