NEW QUESTION # 264

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2022 and has the DHCP Server role. Server1 contains a single DHCP scope named Scope1.

You deploy five printers to the network.

You need to ensure that the printers are always assigned the same IP address.

Solution: You create a DHCP address exclusion for each printer.

Does this meet the requirement?

- **A. No**
- B. Yes

Answer: A

NEW QUESTION # 265

You have an Azure virtual machine named Server1 that runs a network management application.

Server1 has the following network configuration:

- Network interface: Nic1

- IP address 10.1.1.1/24

- Connected to: Vnet1/Subnet1

You need connect Server1 to an additional subnet named Vnet1/Subnet2.

What should you do?

- A. Create a private endpoint on Subnet2
- **B. Add a network interface to server1.**
- C. Add an IP configuration to Nic1.
- D. Modify the IP configurations of Nic1.

Answer: B

Explanation:

First add another network interface to Server1, then connect it to Subnet2.

Virtual network and subnets.

A subnet is a range of IP addresses in the virtual network. You can divide a virtual network into multiple subnets for organization and security. Each NIC in a VM is connected to one subnet in one virtual network. NICs connected to subnets (same or different) within
