SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q25-Q30):

NEW QUESTION # 25

You are entering values for several expense accounts in a data table. Which data entry mode must you use to process the data with a delay defined in System Administration?

- A. Fluid
- B. Single
- C. Mass

Answer: A

NEW QUESTION # 26

Your users need to analyze data in a story. What kinds of data models can you create? Note: There are 2 correct answers to this question.

- A. Analytic
- B. Standalone
- C. Embedded
- D. Planning

Answer: A,D

NEW QUESTION # 27

You have a live data model with two dimensions: Firstname and Lastname. Users want a single dimension in the data model that displays the dimensions as Lastname, Firstname. What must you do?

- A. Create a calculated dimension in the data model.
- B. Group the Firstname and Lastname in the data model.
- C. Create a calculated dimension in the story.
- D. Create the combined data in the source system.

Answer: A

Explanation:

To combine two dimensions, Firstname and Lastname, into a single dimension displaying as Lastname, Firstname in a live data model, you should create a calculated dimension in the data model. This calculated dimension will concatenate the two fields into one, according to the specified format. This approach allows for the creation of a new dimension that can be used across various

reports and analyses within the model, maintaining the integrity of the original dimensions.

NEW QUESTION # 28

You are creating a styling rule for a table. What is the context?

- A. The most granular level in the table
- **B. The location of the cursor**
- C. The table header
- D. The highest level in the table

Answer: B

NEW QUESTION # 29

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- **A. Schedule the import**
- B. Allow model import
- C. Refresh the import job
- **D. Refresh the story**

Answer: A,D

Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

NEW QUESTION # 30

.....

The study material is available in three easy-to-access formats. The first one is PDF format which is printable and portable. You can access it anywhere with your smart devices like smartphones, tablets, and laptops.
