- 6 Log into Splunk
- **B. 1 Request Login**
2 Check authentication / group mapping
3 Authentication Granted
4. Duo MFA
5. Create User session
6. Log into Splunk
- C. 1 Request Login
2. Connect to SAML server
3 Duo MFA
4 Create User session
5 Authentication Granted 6. Log into Splunk
- D. 1. Request Login 2 Duo MFA
3. Authentication Granted 4 Connect to SAML server
5. Log into Splunk
6. Create User session

Answer: B

Explanation:

Using the provided DUO/Splunk reference URL <https://duo.com/docs/splunk> Scroll down to the Network Diagram section and note the following 6 similar steps

- 1 - SPLunk connection initiated
- 2 - Primary authentication
- 3 - Splunk connection established to Duo Security over TCP port 443
- 4 - Secondary authentication via Duo Security's service
- 5 - Splunk receives authentication response
- 6 - Splunk session logged in.

NEW QUESTION # 24

What happens when there are conflicting settings within two or more configuration files?

- A. The setting for both values will be used together.
- B. The setting is ignored until conflict is resolved.
- **C. The setting with the highest precedence is used.**
- D. The setting with the lowest precedence is used.

Answer: C

Explanation:

Explanation

When there are conflicting settings within two or more configuration files, the setting with the highest precedence is used. The precedence of configuration files is determined by a combination of the file type, the directory location, and the alphabetical order of the file names.

NEW QUESTION # 25

What are the values for host and index for [stanza1] used by Splunk during index time, given the following configuration files?

- **A. host=server1
index=unixinfo**
- B. host=searchsvr1
index=searchinfo
- C. host=server1
index=searchinfo
- D. host=unixsvr1
index=unixinfo

Answer: A

Explanation:

- etc/system/local/ has better precedence at index time - for identical settings in the same file, the last one overwrite others, see : <https://community.splunk.com/t5/Getting-Data-In/What-is-the-precedence-for-identical-stanzas-within-a-single/m-p/283566>

NEW QUESTION # 26

What are the required stanza attributes when configuring the transforms. conf to manipulate or remove events?

- A. REGEX, DEST_KEY, FORMAT
- B. REGEX, DEST_KEY FORMATTING
- C. REGEX, SRC_KEY, FORMAT
- D. REGEX, DEST_FORMAT

Answer: D**NEW QUESTION # 27**

Which of the following CLI commands removes a search peer from Distributed Search?

- A. splunk clear search-server -auth admin:password 123.45.67.89:8089
- B. **splunk remove search-server -auth admin:password 123.45.67.89:8089**
- C. splunk clear search-peer -auth admin:password 123.45.67.89:8089
- D. splunk remove search-peer -auth admin:password 123.45.67.89:8089

Answer: B

Explanation:

To remove a search peer from a search head in a distributed search environment using the CLI, Splunk provides the `splunk remove search-server` command. This command is executed on the search head and removes the specified search peer from its configuration.

The correct syntax for this command is:

`splunk remove search-server -auth <user>:<password> <host>:<port>`

Where:

* `<user>:<password>` are the credentials for the search head.

* `<host>:<port>` specifies the management port of the search peer to be removed.

For example:

bash

CopyEdit

`splunk remove search-server -auth admin:password 123.45.67.89:8089`

This command removes the search peer from the search head's configuration. It's important to note that this action does not affect the search peer itself; it merely removes the association from the search head.
